SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Integer16 P-Group: Basic positioner Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 1 Func. diagram: 3615, 3616 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the mode to evaluate "external block change".		
Value:	0: External block change via the measuring probe 1: External block change via BI: p2633		
Dependency:	Refer to: p2623, p2633, r2677, r2678		
Note:	In the mode "external block change via measuring probe (p2632 = 0), the following applies: When starting a traversing block with the block change enable CONTINUE_EXTERNAL, CONTINUE_EXTERNAL_WAIT and CONTINUE_EXTERNAL_ALARM an activated "flying referencing" is interrupted. After ending the block, "flying referencing" must be reactivated via BI: p2595 = 0/1 signal.		

p2633	BI: EPOS external block change (0 -> 1) / Ext BlckChg (0->1)		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3615 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for "external block change". BI: p2633 = 0/1 signal		
Dependency:	The evaluation of the signal is only active p2632 = 1. Refer to: p2623, p2632, p2640, p2641, r2677, r2678		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	A 0/1 edge initiates a flying block change in the subsequent traversing block. When the external block change is identified, the actual position is saved in r2678. A traversing task can be influenced using the following signals: - intermediate stop via BI: p2640. - reject traversing task via BI: p2641.		
p2634[0...n]	EPOS fixed stop maximum following error / Following err max		
SERVO (Pos ctrl), VECTOR (Pos ctrl)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 0 [LU]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3617, 4025 Unit selection: - Expert list: 1 Factory setting 1000 [LU]
Description:	Sets the following error to detect the "fixed stop reached" state (r2526.4).		
Dependency:	Refer to: r2526, p2621, r2675		
Note:	The state "fixed stop reached" is detected if the following error exceeds the theoretically calculated following error value by p2634.		
p2635	EPOS fixed stop monitoring window / Fixed stop monit		
SERVO (Pos ctrl), VECTOR (Pos ctrl)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed loop position control Not for motor type: - Min 0 [LU]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2147482647 [LU]	Access level: 1 Func. diagram: 3617, 4025 Unit selection: - Expert list: 1 Factory setting 100 [LU]
Description:	Sets the monitoring window of the actual position after the fixed stop is reached.		
Dependency:	Refer to: r2526, r2683 Refer to: F07484		
Note:	If, after the fixed stop is reached, the end stop shifts in either the positive or negative direction by more than the value set here, then BO: r2526.5 is set to 1 and an appropriate message is output.		

p2637	BI: EPOS fixed stop reached / Fixed stop reached		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3616, 3617 Unit selection: - Expert list: 1 Factory setting 2526.4
Description:	Sets the signal source for the feedback signal "fixed stop reached". BI: p2637 = 1 signal Fixed stop is reached. BI: p2637 = 0 signal Fixed stop is not reached.		
Dependency:	Refer to: r2526, p2634		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The identification of "fixed stop reached" is, for the factory setting, dependent on the signal BO: r2526.4 (fixed stop reached). This signal is influenced via p2634 (EPOS fixed stop, maximum following error).		
p2638	BI: EPOS fixed stop outside the monitoring window / Fixed stop outside		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3616, 3617 Unit selection: - Expert list: 1 Factory setting 2526.5
Description:	Sets the signal source for the feedback signal "fixed stop outside the monitoring window". BI: p2638 = 1 signal Fixed stop is located outside the monitoring window. BI: p2638 = 0 signal Fixed stop is inside the monitoring window.		
Dependency:	Refer to: r2526, p2635		
Note:	The identification of "fixed stop outside the monitoring window" is, for the factory setting, dependent on signal BO: r2526.5 (fixed stop outside window). This signal is influenced via p2635 (EPOS fixed stop monitoring window).		
p2639	BI: EPOS force limit reached / F_limit reached		
SERVO (EPOS, Lin)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 1407.7
Description:	Sets the signal source for the feedback signal "force limit reached" when traversing to fixed stop. BI: p2639 = 1 signal Force limit has been reached. BI: p2639 = 0 signal Force limit has not been reached.		
Dependency:	Refer to: r1407		
Note:	The feedback signal from "force limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (torque limit reached).		

p2639	BI: EPOS torque limit reached / M_limit reached		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 3616
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	1407.7
Description:	Sets the signal source for the feedback signal "torque limit reached" when traversing to fixed stop. BI: p2639 = 1 signal Torque limit is reached. BI: p2639 = 0 signal Torque limit is not reached.		
Dependency:	Refer to: r1407		
Note:	The feedback signal from "torque limit reached" is, for the factory setting, dependent on the signal BO: r1407.7 (torque limit reached).		
p2640	BI: EPOS intermediate stop (0 signal) / Intermediate stop		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 3616, 3620, 3625
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the "no intermediate stop/intermediate stop". BI: p2640 = 1 signal No intermediate stop. BI: p2640 = 0 signal Intermediate stop.		
Dependency:	Refer to: p2631, p2641, p2647, p2649		
Caution:	For BI: p2649 = 1 signal, the following applies: Motion starts without any explicit control signal.		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI". When activating the intermediate stop, the axis brakes with the parameterized deceleration (p2620 or p2645).		
p2641	BI: EPOS reject traversing task (0 signal) / Trav_task reject		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 3616, 3620, 3625
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for "do not reject traversing task/reject traversing task". BI: p2641 = 1 signal Do not reject traversing task. BI: p2641 = 0 signal Reject traversing task.		
Dependency:	Refer to: p2631, p2640, p2647, p2649		
Caution:	For BI: p2649 = 1 signal, the following applies: Motion starts without any explicit control signal.		

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: This signal is only effective in the modes "traversing blocks" and "direct setpoint input/MDI".
 When activating reject traversing tasks, then the axis brakes with the maximum deceleration (p2573).

p2642	CI: EPOS direct setpoint input/MDI position setpoint / MDI s_set		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Integer32	Dynamic index: -	Func. diagram: 3618
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	2690[0]
Description:	Sets the signal source for the position setpoint in the mode "direct setpoint input/MDI".		
Dependency:	Refer to: p2648, p2649, p2650, p2690		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	Depending on p2649, the position setpoint is either transferred continuously or edge-triggered. The position setpoint input is interpreted as length unit [LU].		

p2643	CI: EPOS direct setpoint input/MDI velocity setpoint / MDI v_set		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Integer32	Dynamic index: -	Func. diagram: 3618
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	2691[0]
Description:	Sets the signal source for the velocity setpoint in the "direct setpoint input/MDI mode".		
Dependency:	Refer to: p2649, p2650, p2691		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	Depending on p2649, the velocity setpoint is either transferred continuously or edge-triggered. The velocity setpoint input is interpreted as [1000 LU/min].		

p2644	CI: EPOS direct setpoint input/MDI acceleration override / MDI a_over		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / FloatingPoint32	Dynamic index: -	Func. diagram: 3618
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	2692[0]
Description:	Sets the signal source for the acceleration override in the operating mode "direct setpoint input/MDI".		
Dependency:	Refer to: p2649, p2650, p2692		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	Depending on p2649, the acceleration override is either transferred continuously or edge-triggered. The signal value 4000 hex (16384 dec) corresponds to 100 %.		

p2645	CI: EPOS direct setpoint input/MDI deceleration override / MDI -a_over		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / FloatingPoint32	Dynamic index: -	Func. diagram: 3618
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
	-	-	2693[0]
Description:	Sets the signal source for the deceleration override in the operating mode "direct setpoint input/MDI".		
Dependency:	Refer to: p2649, p2650, p2693		

Notice: If, when calculating the traversing profile, it is identified that the target position with the programmed deceleration override cannot be reached without reversing the direction, then when accepting the dynamic values, the larger deceleration override is accepted and becomes effective.

The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: Depending on p2649, the deceleration override is either transferred continuously or edge-triggered.
The signal value 4000 hex (16384 dec) corresponds to 100 %.

p2646 CI: EPOS velocity override / v_over

SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / FloatingPoint32	Dynamic index: -	Func. diagram: 3630
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min	Max	Factory setting
-	-	1	

Description: Sets the signal source for the velocity override.

This velocity override is effective in the following operating modes "direct setpoint input/MDI", "traversing blocks", "jogging" and "search for reference" (when approaching the reference cam).

Dependency: Refer to: p2571, p2585, p2586, p2605, p2618, p2643, r2681

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The effective override (r2681) can differ from the specified override due to limits (e.g. maximum velocity).

p2647 BI: EPOS direct setpoint input/MDI selection / MDI selection

SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 3620, 3625, 3640
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
-	-	0	

Description: Sets the signal source for selecting the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2640, p2641, p2642, p2643, p2644, p2645, p2646, p2648, p2649, p2650, p2651, p2652, p2653

Note: In this mode, using BI: p2653 it is possible to make a flying changeover between setting-up and positioning.
In this mode, even if the axis is not referenced (r2684.11 = 0) relative positioning is possible.

p2648 BI: EPOS direct setpoint input/MDI positioning type / MDI pos_type

SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 3620
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
-	-	0	

Description: Sets the signal source for the positioning type in the mode "direct setpoint input/MDI".

BI: p2648 = 1 signal

Absolute positioning is selected.

BI: p2648 = 0 signal

Relative positioning is selected.

Dependency: Refer to: p2649, p2650, p2654

Refer to: A07461, F07488

Notice: Absolute positioning:

To traverse, the reference point must be set (r2684.11 = 1).

Relative positioning:

To traverse, it is not necessary that the reference point is set.

Note: Depending on p2649, the positioning type is either transferred continuously or edge-triggered.
Binector input p2648 is only evaluated when connector input p2654 = 0. If p2654 is a value other than 0, the positioning type is evaluated by means of the set signal source.

p2649	BI: EPOS direct setpoint input/MDI transfer type selection / MDI trans_type sel		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3620 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to define how values are transferred in the operating mode "direct setpoint input/MDI". BI: p2649 = 1 signal Values are continually transferred (refer to parameter under dependency). BI: p2649 = 0 signal The values are transferred for BI: p2650 = 0/1 signal.		
Dependency:	Refer to: p2642, p2643, p2644, p2645, p2648, p2650, p2651, p2652		
Caution:	For BI: p2649 = 1 signal, the following applies: Motion starts without any explicit control signal.		
Note:	Parameter p2649 can only be changed when p0922 (p2079) = 999.		
p2650	BI: EPOS direct setpoint input/MDI setpoint acceptance edge / MDI setp_accept		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3620 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to accept the values for edge-triggered selection (BI: p2649 = 0 signal) in the operating mode "direct setpoint input/MDI". BI: p2650 = 0/1 signal and BI: p2649 = 0 signal Values are accepted, edge-triggered (refer to parameter under dependency).		
Dependency:	Refer to: p2640, p2641, p2642, p2643, p2644, p2645, p2648, p2649, p2651, p2652, r2684		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The status signal r2684.12 = 0/1 signal is used for acknowledgement. The operating mode "direct setpoint input/MDI" can be influenced via the following signals: - intermediate stop via BI: p2640. - reject traversing task via BI: p2641.		
p2651	BI: EPOS direct setpoint input/MDI direction selection, positive / MDI dir_sel pos		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3620 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the positive direction selection in the operating mode "direct setpoint input/MDI".		
Dependency:	Refer to: p2576, p2648, p2649, p2650, p2652, p2653, p2654		

Note: The following applies for "setting-up":

- the traversing direction can be entered using this binector input.
- if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed).
- if both directions (p2651, p2652) are deselected, then the axis remains stationary (zero speed).

The following applies for "positioning":

Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:

BI: p2651 / BI: p2652

0 signal / 0 signal: Absolute positioning through the shortest distance.

1 signal / 0 signal: Absolute positioning in the positive direction.

0 signal / 1 signal: Absolute positioning in the negative direction.

1 signal / 1 signal: Absolute positioning through the shortest distance.

p2652 BI: EPOS direct setpoint input/MDI direction selection, negative / MDI dir_sel neg

SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 3620
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the negative direction selection in the operating mode "direct setpoint input/MDI".

Dependency: Refer to: p2576, p2648, p2649, p2650, p2651, p2653, p2654

Note: The following applies for "setting-up":

- the traversing direction can be entered using this binector input.
- if both directions (p2651, p2652) are selected, then the axis remains stationary (zero speed).
- if both directions (p2651, p2652) are deselected, then the axis remains stationary (zero speed).

The following applies for "positioning":

Using binector inputs p2651 and p2652, when the modulo correction (BI: p2577 = 1 signal) is activated and for absolute positioning (BI: p2648 = 1 signal), the traversing direction is specified as follows:

BI: p2651 / BI: p2652

0 signal / 0 signal: Absolute positioning through the shortest distance.

1 signal / 0 signal: Absolute positioning in the positive direction.

0 signal / 1 signal: Absolute positioning in the negative direction.

1 signal / 1 signal: Absolute positioning through the shortest distance.

p2653 BI: EPOS direct setpoint input/MDI setting-up selection / MDI setting-up sel

SERVO (EPOS), VECTOR (EPOS)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 3620
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for setting-up in the operating mode "direct setpoint input/MDI".

BI: p2653 = 1 signal

Setting-up selected.

BI: p2653 = 0 signal

Positioning selected.

Dependency: Refer to: p2651, p2652

Note: In the operating mode "direct setpoint input/MDI", it is possible to make a flying changeover between setting-up and positioning.

For "setup" (BI: p2653 = 1 signal), the following applies:

A traversing direction must be selected via binector inputs p2651 and p2652.

p2654			
CI: EPOS direct setpoint input/MDI mode adaptation / MDI mode adapt			
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Integer16 P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3620 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to interconnect the MDI mode to the operating mode "direct setpoint input MDI" via PROFIBUS telegram 110. CI: p2654 = 0 The binector inputs listed below are evaluated. CI: p2654 > 0 The following binector inputs are not evaluated: - BI: p2648 (positioning type) - BI: p2651 (direction selection, positive) - BI: p2652 (direction selection, negative) In this case, the following definitions apply: Signal via CI: p2654 = xx0x hex -> absolute Signal via CI: p2654 = xx1x hex -> relative Signal via CI: p2654 = xx2x hex -> abs_pos (only for modulo correction) Signal via CI: p2654 = xx3x hex -> abs_neg (only for modulo correction)		
Dependency:	Refer to: p2648, p2651, p2652		
p2655[0...1]			
BI: EPOS select tracking mode / Sel tracking mode			
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting [0] 1 [1] 2526.7
Description:	Sets the signal source to select tracking mode. BI: p2655[0] or BI: p2655[1] = 1 signal Tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal). BI: p2655[0] and BI: p2655[1] = 0 signal No tracking mode after withdrawing the enable signal from EPOS (BI: p2656 = 0 signal).		
Dependency:	Refer to: p2656		
Notice:	The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	For the following events, independent of the signal that is present, tracking mode is selected: - after booting. - after a 0/1 signal at BI: p2658 (EPOS position actual value, valid feedback signal). - while a fault is present.		

p2656	BI: EPOS enable basic positioner / EPOS enable		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting 2526.3
Description:	Sets the signal source to enable the basic positioner. BI: p2656 = 1 signal The basic positioner is enabled. BI: p2656 = 0 signal The basic positioner is not enabled.		
Dependency:	Refer to: r2526, p2655		
p2657	CI: EPOS position actual value/position setting value / Pos act/set value		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Integer32 P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3610, 3616, 3620, 3635 Unit selection: - Expert list: 1 Factory setting 2521[0]
Description:	Sets the signal source for the position actual value/position setting value.		
Dependency:	Refer to: r2521, p2658		
Note:	In the tracking mode, the position setpoint is taken from this connector input.		
p2658	BI: EPOS pos. actual value valid, feedback signal / Pos valid feedback		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting 2526.0
Description:	Sets the signal source for the feedback signal "position actual value is valid". BI: p2658 = 1 signal The position actual value received via CI: p2657 is valid. BI: p2658 = 0 signal The position actual value received via CI: p2657 is invalid.		
Dependency:	Refer to: r2526, p2657		
Note:	While a 0 signal is present, the position setpoint (p2665) is held at the value of 0.		

p2659	BI: EPOS referencing active feedback signal / Ref act fdbk		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting 2526.1
Description:	Sets the signal source for the feedback signal "referencing active". BI: p2659 = 1 signal Referencing is active. BI: p2659 = 0 signal Referencing is not active.		
Dependency:	Refer to: r2526		
p2660	CI: EPOS measured value referencing / Meas val ref		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Integer32 P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3612, 3614 Unit selection: - Expert list: 1 Factory setting 2523[0]
Description:	Sets the signal source for the measured value for the function "referencing".		
Dependency:	Refer to: r2523		
p2661	BI: EPOS measured value valid, feedback signal / MeasVal valid fdbk		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3612, 3614, 3615 Unit selection: - Expert list: 1 Factory setting 2526.2
Description:	Sets the signal source for the feedback signal "measured value valid". BI: p2661 = 1 signal The measured value received via CI: p2660 is valid. BI: p2661 = 0 signal The measured value received via CI: p2660 is invalid.		
Dependency:	Refer to: r2526, p2660		
p2662	BI: EPOS adjustment value valid feedback signal / Adj val valid FS		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2526.9
Description:	Sets the signal source for the feedback signal "adjustment value valid". BI: p2662 = 1 signal The adjustment value received via CI: p2660 is valid. BI: p2662 = 0 signal The adjustment value received via CI: p2660 is not valid.		
Dependency:	Refer to: r2526, p2660		

p2663	BI: EPOS clamping active feedback signal / Clamping active FS		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting 2526.8
Description:	Sets the signal source for the feedback signal "clamping active for travel to fixed stop". BI: p2663 = 1 signal Clamping is active BI: p2663 = 0 signal Clamping is not active.		
Dependency:	Refer to: r2526		
Note:	The feedback signal from "terminals active" is, for the factory setting, dependent on the signal BO: r2526.8 (terminals active when moving to a fixed stop).		
r2665	CO: EPOS position setpoint / s_set		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min - [LU]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Displays the current absolute position setpoint.		
Dependency:	Refer to: p2530		
Note:	As standard, the following BICO interconnection is established: CI: p2530 = r2665		
r2666	CO: EPOS velocity setpoint / v_set

Description:	Displays the task that is presently being processed.		
Value:	0: Inactive 1: POSITIONING 2: FIXED STOP 3: ENDLESS_POS 4: ENDLESS_NEG 5: WAITING 6: GOTO 7: SET_O 8: RESET_O 9: JERK		
Dependency:	Refer to: p2621		
r2676	CO: EPOS current task parameter / Task para cur		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the task parameter presently being processed in the "traversing blocks" operating mode.		
Dependency:	Refer to: p2622		
Note:	The following is displayed depending on the task: FIXED STOP: Clamping torque (0 ... 65536 [0.01 Nm]) or clamping force (0 ... 65536 [N]) WAIT: Delay time [ms] GOTO: Block number SET_O: 1, 2, 3 --> direct output 1, 2 or 3 (both) is set RESET_O: 1, 2, 3 --> direct output 1, 2 or 3 (both) is set JERK: 0 --> deactivate, 1 --> activate		
r2677	CO: EPOS current task mode / Task mode cur		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: - Data type: Unsigned16 P-Group: Basic positioner Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 3616 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the task mode presently being processed.		
Dependency:	Refer to: p2623		

r2678	CO: EPOS external block change / Ext BlckChg s_act		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min - [LU]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3615, 3616, 3620 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Displays the actual position for the following events: - external block change via measuring probe (p2632 = 0, BI: p2661 = 0/1 signal). - external block change via BI: p2633 (p2632 = 1, BI: p2633 = 0/1 signal). - activate traversing task (BI: p2631 = 0/1 signal).		
Dependency:	Refer to: p2631, p2632, p2633, p2661		
r2680	CO: EPOS clearance, reference cam and zero mark / Clearance cam/ZM		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min - [LU]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3612 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Displays the clearance determined between the reference cam and zero mark in the search for reference.		
r2681	CO: EPOS velocity override effective / v_over effective		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: - Data type: FloatingPoint32 P-Group: Basic positioner Not for motor type: - Min - [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [%]	Access level: 1 Func. diagram: 3630 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the currently effective velocity override.		
Dependency:	Refer to: p2571, p2646		
Note:	The effective override can differ from the specified override due to limits (e.g. p2571, maximum velocity).		
r2682	CO: EPOS residual distance to go / Residual distance		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: - Data type: Integer32 P-Group: Basic positioner Not for motor type: - Min - [LU]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [LU]	Access level: 1 Func. diagram: 3635 Unit selection: - Expert list: 1 Factory setting - [LU]
Description:	Displays the current residual distance. The remaining distance is the distance to still to be moved through up to the end of the current positioning task.		
Dependency:	Refer to: r2665, r2671, r2678		

r2683.0...14 CO/BO: EPOS status word 1 / POS_ZSW1

SERVO (Lin, Pos ctrl)	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 3645
	P-Group: Closed loop position control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -

Description: Displays status word 1 for the basic positioner (EPOS).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Tracking mode active	Yes	No	3635, 4020
	01	Velocity limiting active	Yes	No	3630
	02	Setpoint available	Yes	No	3635
	03	Target position reached	Yes	No	3635
	04	Axis moves forwards	Yes	No	3635
	05	Axis moves backwards	Yes	No	3635
	06	Software limit switch minus reached	Yes	No	3635
	07	Software limit switch plus reached	Yes	No	3635
	08	Position actual value <= cam switching position 1	Yes	No	4025
	09	Position actual value <= cam switching position 2	Yes	No	4025
	10	Direct output 1 via traversing block	Yes	No	3616
	11	Direct output 2 via traversing block	Yes	No	3616
	12	Fixed stop reached	Yes	No	3616, 3617
	13	Fixed stop clamping force reached	Yes	No	3616, 3617
	14	Travel to fixed stop active	Yes	No	3616, 3617

Dependency: Refer to: r2684

Note: Re bit 02, 04, 05, 06, 07:
This signals designate the state after jerk limiting.
Re bit 08, 09:
These signals are generated in the "closed-loop position control" function module.

r2683.0...14 CO/BO: EPOS status word 1 / POS_ZSW1

SERVO (Pos ctrl), VECTOR (Pos ctrl)	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 3645
	P-Group: Closed loop position control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -

Description: Displays status word 1 for the basic positioner (EPOS).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Tracking mode active	Yes	No	3635, 4020
	01	Velocity limiting active	Yes	No	3630
	02	Setpoint available	Yes	No	3635
	03	Target position reached	Yes	No	3635
	04	Axis moves forwards	Yes	No	3635
	05	Axis moves backwards	Yes	No	3635
	06	Software limit switch minus reached	Yes	No	3635
	07	Software limit switch plus reached	Yes	No	3635
	08	Position actual value <= cam switching position 1	Yes	No	4025

09	Position actual value <= cam switching position 2	Yes	No	4025
10	Direct output 1 via traversing block	Yes	No	3616
11	Direct output 2 via traversing block	Yes	No	3616
12	Fixed stop reached	Yes	No	3616, 3617
13	Fixed stop clamping torque reached	Yes	No	3616, 3617
14	Travel to fixed stop active	Yes	No	3616, 3617

Dependency: Refer to: r2684

Note: Re bit 02, 04, 05, 06, 07:

This signals designate the state after jerk limiting.

Re bit 08, 09:

These signals are generated in the "closed-loop position control" function module.

r2684.0...15 CO/BO: EPOS status word 2 / POS_ZSW2

SERVO (Pos ctrl),
VECTOR (Pos ctrl)

Can be changed: -

Data type: Unsigned16

Dynamic index: -

Func. diagram: 3646

P-Group: Closed loop position control

Units group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

-

-

-

Description: Displays status word 2 for the basic positioner (EPOS).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Search for reference active	Active	Not active	3612
01	Flying referencing active	Active	Not active	3614
02	Referencing active	Active	Not active	-
03	Printing mark outside outer window	Yes	No	3614
04	Axis accelerating	Yes	No	3635
05	Axis decelerating	Yes	No	3635
06	Jerk limiting active	Yes	No	3635
07	Activate correction	Yes	No	3635
08	Following error in tolerance	Yes	No	4025
09	Modulo correction active	Yes	No	-
10	Target position reached	Yes	No	4020
11	Reference point set	Yes	No	3612, 3614, 3630
12	Acknowledgement, traversing block activated	Yes	No	3616, 3620
13	STOP cam minus active	Yes	No	3630
14	STOP cam plus active	Yes	No	3630
15	Traversing command active	Yes	No	3635

Note: Re bit 02:

The "referencing active" signal is an OR logic operation of "search for reference active" and "flying referencing active".

Re bit 00 ... 07 and 11 ... 14:

These signals are generated in the function module "basic positioner".

Re bit 08:

The signal is generated in the "closed-loop position control" function module.

	Not for motor type: -	Scaling: -	Expert list: 1
	Min 1 [1000 LU/min]	Max 40000000 [1000 LU/min]	Factory setting 600 [1000 LU/min]
Description:	Sets a fixed setpoint for the velocity.		
Dependency:	Refer to: p2643		
Note:	As standard, the following BICO interconnection is established: CI: p2643 = r2691		

p2692 CO: EPOS acceleration override, fixed setpoint / a_over fixed val

SERVO (EPOS), VECTOR (EPOS)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 3618
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.100 [%]	Max 100.000 [%]	Factory setting 100.000 [%]
Description:	Sets a fixed setpoint for the acceleration override.		
Dependency:	Refer to: p2572, p2644		

Note: As standard, the following BICO interconnection is established: CI: p2644 = r2692
The percentage value refers to the maximum acceleration (p2572).

p2693	CO: EPOS deceleration override, fixed setpoint / -a_over fixed val		
SERVO (EPOS), VECTOR (EPOS)	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 3618
	P-Group: Basic positioner	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.100 [%]	100.000 [%]	100.000 [%]

Description: Sets a fixed setpoint for the deceleration override.

Dependency: Refer to: p2573, p2645

Note: As standard, the following BICO interconnection is established: CI: p2645 = r2693
The percentage value refers to the maximum deceleration (p2573).

r2700	CO: Reference frequency / f_ref		
A_INF, B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and connector output of the current reference quantity for the frequency (p2000).
All frequencies specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
This parameter has the unit Hz.

Dependency: Refer to: p2000

Note: This parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2700	CO: Reference speed/reference frequency / n_ref/f_ref		
ENCODER, SERVO, TM41, VECTOR	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Display and connector output for the reference quantity for speed and frequency (p2000).
All speeds or frequencies specified as relative value are referred to this reference quantity.
The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.
The following applies: Reference frequency (in Hz) = reference speed (in rpm) / 60
This parameter has the unit rpm.

Dependency: Refer to: p2000

Note: This parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2700	CO: Reference velocity/reference frequency current / v_ref/f_ref act		
ENCODER (Lin enc)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output for the current reference quantity for velocity and frequency. All velocities or frequencies specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. The following applies: Reference frequency (in Hz) = reference velocity (in m/min) / 60		
Dependency:	Refer to: p2000		
Note:	This parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.		
r2700	CO: Reference frequency, current / f_ref act		
S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output of the current reference quantity for the frequency (p2000). All frequencies specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. This parameter has the unit Hz.		
Dependency:	Refer to: p2000		
Note:	This parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.		
r2700	CO: Reference velocity/reference frequency current / v_ref/f_ref act		
SERVO (Lin)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Display and connector output for the current reference quantity for velocity and frequency. All velocities or frequencies specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. The following applies: Reference frequency (in Hz) = reference velocity (in m/min) / 60		
Dependency:	Refer to: p2000		

Note: This parameter represents the numerical value of the reference quantity in the currently selected units and is only available for interconnection with Drive Control Chart (DCC).
 If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
 Example 1:
 The signal of an analog input (e.g. r4055[0]) is connected to a velocity setpoint (e.g. p1070[0]). The actual percentage input value is cyclically converted into the absolute velocity setpoint using the reference velocity (p2000).
 Example 2:
 The setpoint from PROFIBUS (r2050[1]) is connected to a velocity setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute velocity setpoint via reference velocity (p2000).

r2701	CO: Reference voltage / Reference voltage		
A_INF, B_INF, S_INF, SERVO, TM41, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity for voltages p2001. All voltages specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. This parameter has the unit Vrms.		
Dependency:	Refer to: p2001		
Note:	This parameter provides the numerical value of the reference quantity p2001 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.		

r2702	CO: Reference current / Reference current		
A_INF, B_INF, S_INF, SERVO, TM41, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity for currents p2002. All currents specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. This parameter has the unit Arms.		
Dependency:	Refer to: p2002		
Note:	This parameter provides the numerical value of the reference quantity p2002 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.		

r2703	CO: Reference torque / Reference torque		
SERVO, TM41, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity p2003 for torque (r0108.12 = 0) or force (r0108.12 = 1). All torques specified as relative values (r0108.12 = 0) or forces (r0108.12 = 1) are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. The unit of this parameter is the same as the unit selected for p2003.		

Dependency: p0505, r0108.12
Refer to: p2003

Note: This parameter provides the numerical value of the reference quantity p2003 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.

r2703 CO: Reference force current / Ref force cur

SERVO (Lin)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the current reference quantity for forces.

All forces specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

Dependency: p0505, r0108.12
Refer to: p2003

Note: This parameter represents the numerical value of the reference quantity in the currently selected units and is only available for interconnection with Drive Control Chart (DCC).
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
Example:
The actual value of the total force (r0079[0]) is connected to a test socket (e.g. p0771[0]). The actual force is cyclically converted into a percentage of the reference force (p2003) and output according to the parameterized scaling.

r2704 CO: Reference power / Reference power

A_INF, B_INF, S_INF, SERVO, TM41, VECTOR	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Connector output of the reference quantity for powers p2004.

All power ratings specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex.

The unit of this parameter is the same as the unit selected for p2004.

Dependency: This value is calculated as voltage x current for the infeed and as torque x speed for closed-loop controls.
Refer to: r2004

Note: This parameter provides the numerical value of the reference quantity p2004 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
The reference power is calculated as follows:
- $2 \cdot \pi \cdot \text{reference speed} / 60 \cdot \text{reference torque (motor)}$
- $\text{reference voltage} \cdot \text{reference current} \cdot \text{root}(3)$ (infeed)

r2705	CO: Reference angle / Reference angle		
A_INF, B_INF, S_INF, SERVO, TM41, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity for angles p2005. All angles specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. This parameter has the unit degree.		
Dependency:	Refer to: p2005		
Note:	This parameter provides the numerical value of the reference quantity p2005 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.		
r2706	CO: Reference temperature / Reference temp		
A_INF, B_INF, S_INF, SERVO, TM120, TM31, TM41, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity for temperatures. All temperatures specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. This parameter has the unit degree Celsius.		
Note:	This parameter provides the numerical value of the reference quantity for the temperature as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.		
r2707	CO: Reference acceleration / Ref accel		
SERVO, TM41, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Connector output of the reference quantity for accelerations p2007. All acceleration rates specified as relative value are referred to this reference quantity. The reference quantity in this parameter corresponds to 100% or 4000 hex or 4000 0000 hex. The unit of this parameter is the same as the unit selected for p2007.		
Dependency:	r0108.12, p0505 Refer to: p2007		
Note:	This parameter provides the numerical value of the reference quantity p2007 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value in the currently selected unit can be adopted unchanged from this connector output in DCC.		

p2720[0...n] Load gear configuration / Load gear config

SERVO, VECTOR	Can be changed: C2(1, 4)	Calculated: -	Access level: 1
	Data type: Unsigned32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the configuration for position tracking of a load gear.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Load gear, activate position tracking	Yes	No	-
	01	Axis type	Linear axis	Rotary axis	-
	02	Load gear, reset position	Yes	No	-

Note: For the following events, the non-volatile, saved position values are automatically reset:

- when an encoder replacement has been identified.
- when changing the configuration of the Encoder Data Set (EDS).
- when adjusting the absolute encoder again

p2721[0...n] Load gear, rotary absolute gearbox, revolutions, virtual / Abs rot rev

SERVO, VECTOR	Can be changed: C2(1, 4)	Calculated: -	Access level: 1
	Data type: Unsigned32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder with activated position tracking of the load gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking of the load gear (p2720.0 = 1).

Note: The resolution that is set must be able to be represented using r2723.
 For rotary axes/modulo axes, the following applies:
 This parameter is preset with p0421 and can be changed.
 For linear axes, the following applies:
 This parameter is pre-assigned with p0421, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p2722[0...n] Load gear, position tracking tolerance window / Pos track tol

SERVO, VECTOR	Can be changed: C2(1, 4)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.
 After the system is powered up, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:
 Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.
 Difference outside the tolerance window --> An appropriate message is output.

Dependency: Refer to: F07449

Caution: Rotation, e.g. through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.
 For p2720.0 = 1, the value is automatically pre-assigned quarter of the encoder range.
 Example:
 Quarter of the encoder range = (p0408 * p0421) / 4
 It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

r2723[0...n]	CO: Load gear absolute value / Load gear abs_val		
SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dynamic index: DDS, p0180	Func. diagram: 4010, 4704
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the absolute value after the load gear.		
Notice:	The encoder position actual value must be requested using the encoder control word Gn_STW.13.		
Note:	The increments are displayed in the format the same as r0483.		

r2724[0...n]	CO: Load gear position difference / Load gear pos diff		
SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the position difference before the load gear between powering down and powering up.		
Note:	The increments are displayed in the same format as for r0483/r2723.		
	If the measuring gear of the motor encoder is not activated, the position difference should be read in encoder increments.		
	If the measuring gear of the motor encoder is activated, the position difference is converted using the measuring gear factor.		

p2730[0...3]	BI: LR pos. actual value preprocessing activate neg. corr. (edge) / ActV_prep neg corr		
SERVO (Pos ctrl), VECTOR (Pos ctrl)	Can be changed: T	Calculated: -	Access level: 1
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 4010, 4015
	P-Group: Closed loop position control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source for the function "activate position actual value preprocessing, negative corrective value (edge)".		
	0/1 signal: The corrective value available through CI: p2513 is negated and activated.		
Index:	[0] = Closed-loop position control [1] = Encoder 1 [2] = Encoder 2 [3] = Encoder 3		
Dependency:	Refer to: p2502, p2513, r2684		

p2810[0...1]		BI: AND logic operation inputs / AND inputs

Dependency:		Refer to: p2816			

p2900[0...n]	CO: Fixed value 1 [%] / Fixed value 1 [%]		
SERVO, VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Free function blocks Not for motor type: - Min -10000.00 [%]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: PERCENT Max 10000.00 [%]	Access level: 3 Func. diagram: 1021 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets a fixed percentage.		
Dependency:	Refer to: p2901, p2930		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The value can be used to interconnect a scaling function (e.g. scaling of the main setpoint)		
p2901[0...n]	CO: Fixed value 2 [%] / Fixed value 2 [%]		
SERVO, VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Free function blocks Not for motor type: - Min -10000.00 [%]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: PERCENT Max 10000.00 [%]	Access level: 3 Func. diagram: 1021 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets a fixed percentage.		
Dependency:	Refer to: p2900, p2930		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The value can be used to interconnect a scaling function (e.g. scaling of the supplementary setpoint)		
r2902[0...14]	CO: Fixed values [%] / Fixed values [%]		
SERVO, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Free function blocks Not for motor type: - Min - [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max - [%]	Access level: 1 Func. diagram: 1021 Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Signal sources for frequently used percentage values.		
Index:	[0] = Fixed value +0 % [1] = Fixed value +5 % [2] = Fixed value +10 % [3] = Fixed value +20 % [4] = Fixed value +50 % [5] = Fixed value +100 % [6] = Fixed value +150 % [7] = Fixed value +200 % [8] = Fixed value -5 % [9] = Fixed value -10 % [10] = Fixed value -20 % [11] = Fixed value -50 % [12] = Fixed value -100 % [13] = Fixed value -150 % [14] = Fixed value -200 %		
Dependency:	Refer to: p2900, p2901, p2930		
Note:	The signal sources can, for example, be used to interconnect scalings.		

p2930[0...n]	CO: Fixed value M [Nm] / Fixed value M [Nm]		
SERVO, VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Free function blocks Not for motor type: REL Min -100000.00 [Nm]	Calculated: - Dynamic index: DDS, p0180 Units group: 7_1 Scaling: p2003 Max 100000.00 [Nm]	Access level: 3 Func. diagram: 1021 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [Nm]
Description:	Sets a fixed value for torque.		
Dependency:	Refer to: p2900, p2901		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The value can, for example, be used to interconnect a supplementary torque.		

p2930[0...n]	CO: Fixed value F [N] / Fixed value F [N]		
SERVO (Lin)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Free function blocks Not for motor type: REL Min -100000.00 [N]	Calculated: - Dynamic index: DDS, p0180 Units group: 8_1 Scaling: p2003 Max 100000.00 [N]	Access level: 3 Func. diagram: 1021 Unit selection: p0505 Expert list: 1 Factory setting 0.00 [N]
Description:	Sets a fixed value for force.		
Dependency:	Refer to: p2900, p2901		
Notice:	A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.		
Note:	The value can, for example, be used to interconnect a supplementary force.		

p3016	MotId torque constant identified / kT ident		
SERVO	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: ASM, REL, FEM Min 0.00 [Nm/A]	Calculated: CALC_MOD_ALL Dynamic index: - Units group: 28_1 Scaling: - Max 100.00 [Nm/A]	Access level: 3 Func. diagram: - Unit selection: p0100 Expert list: 1 Factory setting 0.00 [Nm/A]
Description:	Torque constant for the synchronous motor determined by the motor data identification. This torque constant can be changed after the identification and accepted in p0316 with p1910/p1960 = -3.		
Dependency:	Refer to: p0316, r0334, r1937, p1960

Description:	P gain of the flux controller for an induction motor determined by the motor data identification. This P gain can be changed after the identification and accepted in p1590 with p1910/p1960 = -3.		
Dependency:	Refer to: p1590, p1910		
p3081	Motld flux controller integral time identified / Flux ctrl Tn ident		
SERVO	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor identification Not for motor type: PEM, REL Min 0 [ms]	Calculated: CALC_MOD_ALL Dynamic index: - Units group: - Scaling: - Max 10000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Integral time of the flux controller for an induction motor determined by the motor data identification. This integral time can be changed after the identification and accepted in p1592 with p1910/p1960 = -3.		
Dependency:	Refer to: p1592, p1910		

p3082 MotId current controller P gain identified / I_ctrl Kp ident

SERVO	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Motor identification	Units group: 18_1	Unit selection: p0505
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.000 [V/A]	Max 100000.000 [V/A]	Factory setting 0.000 [V/A]

Description: P gain of the current controller determined by the motor data identification.

This P gain can be changed after the identification and accepted in p1715 with p1910/p1960 = -3.

Dependency: Refer to: p1715, p1910

p3083 MotId current controller integral time identified / I_ctrl Tn ident

SERVO	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Motor identification	Units group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 1000.00 [ms]	Factory setting 0.00 [ms]

Description: Integral time of the current controller determined by the motor data identification.

This integral time can be changed after the identification and accepted in p1717 with p1910/p1960 = -3.

Dependency: Refer to: p1717, p1910

p3088 MotId Motor model changeover speed operation with encoder ident. / MotMod n_chgSnsorI

SERVO	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Motor identification	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00000 [rpm]	Max 210000.00000 [rpm]	Factory setting 0.00000 [rpm]

Description: Changeover speed for the motor model with encoder determined by the motor data identification.

This changeover speed can be changed after the identification and accepted in p1752 with p1910/p1960 = -3.

Dependency: Refer to: p1752, p1910

p3088 MotId Motor model changeover velocity operat. with encod. ident. / v_chg Ident encod

SERVO (Lin)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Motor identification	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00000 [m/min]	Max 1000.00000 [m/min]	Factory setting 0.00000 [m/min]

Description: Changeover velocity for the motor model with encoder determined by the motor data identification.

This changeover velocity can be changed after the identification and accepted in p1752 with p1910/p1960 = -3.

Dependency: Refer to: p1752, p1910

p3100	RTC time stamp mode / RTC t_stamp mode		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the mode for the time stamp p3100 = 0: Time stamp, operating hours p3100 = 1: Time stamp, UTC format		
Note:	RTC: Real Time Clock UTC: Universal Time Coordinates The UTC time started, according to the definition on 01.01.1970 at 00:00:00 and is output in days and milliseconds.		
p3101[0...1]	RTC set UTC time / RTC set UTC		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned32 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 4294967295	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Setting the UTC time. This means that the drive system is synchronized to the time specified by the time master. To start p3101[1] must be written to followed by p3101[0]. After writing to p3101[0], the UTC time is accepted. p3101[0]: Milliseconds p3101[1]: Days

Description:

Displays the status of NAMUR signal bit bar.

The faults or alarms are assigned to the appropriate signaling/message classes and influence a specific message bit.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Fault drive converter data electronics / software error	Yes	No	-
01	Line supply fault	Yes	No	-
02	DC link overvoltage	Yes	No	-
03	Fault drive converter power electronics	Yes	No	-
04	Drive converter overtemperature	Yes	No	-
05	Ground fault	Yes	No	-
06	Motor overload	Yes	No	-
07	Bus error	Yes	No	-
08	External safety-relevant shutdown	Yes	No	-
09	Mot encoder fault	Yes	No	-
10	Error internal communications	Yes	No	-
11	Infeed fault	Yes	No	-
15	Other faults	Yes	No	-

r3114.9...11 CO/BO: Messages status word global / Msg ZSW global

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the global status word for messages.
The appropriate bit is set if at least one message is present at the drive objects.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	09	Alarm present	Yes	No	8065
	10	Fault present	Yes	No	8060
	11	Safety message present	Yes	No	-

Note: The status bits are displayed with delay.

r3115[0...63] Fault drive object initiating / F DO initiating

All objects	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dynamic index: -	Func. diagram: 1750, 8060
	P-Group: Messages	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the drive object number of the initiating drive object for this fault as integer number.
Value = 63:

The fault was initiated by the drive object itself.

Dependency: Refer to: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120, r3122

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

p3116 BI: Acknowledgement automatically suppressed / Ackn suppress

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 8060
	P-Group: Messages	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the automatic acknowledgement on the device drive object.
BI: p3116 = 1 signal
Faults present are not automatically acknowledged on the device drive object. Local device faults are not forwarded.
BI: p3116 = 0 signal
Faults present are automatically acknowledged on the device drive object. Local device faults are forwarded to the first active drive object.

Dependency: Refer to: p2102, p2103, p2104, p2105, p3981

Note: When selecting a standard telegram, the BICO interconnection for control signal STW1.10 (master control by PLC) is automatically established.

p3117				
Change safety message type / Ch. SI mess type				
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Unsigned32 P-Group: Messages Not for motor type: - Min 0 Max 1	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0	
Description:	Sets the re-parameterization of all safety messages for faults and alarms. The relevant message type during changeover is selected by the firmware. 0: Safety messages are not re-parameterized 1: Safety messages are re-parameterized			
Note:	A change only becomes effective after a POWER ON.

	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the suppression of r2139.3 "Fault present" for certain fault responses.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	08	Suppression of fault response ENCODER	On	Off	-
	10	Suppression of fault response NONE	On	Off	-
Dependency:	Refer to: p0491, r2139				
Note:	Depending on the suppression of a fault reaction in this parameter, r2139.1 "Acknowledgement required" is set when at least one fault occurs.				
	Re bit 08:				
	The suppression is only effective if p0491 = 1.				

p3201[0...n]	Excitation current outside the tolerance threshold value / I_exc n Tol thresh		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: ASM, PEM, REL Min 0.1 [%]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0 [%]
Description:	Sets the threshold value for the "excitation current outside tolerance" message for the excitation current monitoring. If the absolute value of the difference between the excitation current setpoint and actual value (r1641 - r1626) exceeds the threshold value and the hysteresis is longer than the selected delay time, then fault F07913 is output. This fault is withdrawn when the threshold voltage is undershot.		
Dependency:	Refer to: r1626, r1641, p3202, p3203 Refer to: F07913		
Note:	The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).		
p3202[0...n]	Excitation current outside the tolerance hysteresis / I_exc n Tol hyst		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: ASM, PEM, REL Min 0.1 [%]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0 [%]
Description:	Sets the hysteresis for the "excitation current outside tolerance" message for the excitation current monitoring.		
Dependency:	Refer to: p3201, p3203 Refer to: F07913		
Note:	The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).		
p3203[0...n]	Excitation current outside the tolerance delay time / I_exc n Tol t_del		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: ASM, PEM, REL Min 0.0 [s]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 10.0 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.0 [s]
Description:	Sets the delay time for the "excitation current outside tolerance" message for the excitation current monitoring.		
Dependency:	Refer to: p3201, p3202 Refer to: F07913		
Note:	The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).		
p3204[0...n]	Flux outside the tolerance threshold value / Flux n tol thresh		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Messages Not for motor type: ASM, PEM, REL Min 0.1 [%]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 100.0 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0 [%]
Description:	Sets the threshold value for the "flux outside the tolerance" message for the flux monitoring. If the absolute value of the difference between the flux setpoint and actual value (r0083 - r0084) falls below the threshold value with hysteresis longer than the selected delay time, then fault F07914 is output. This fault is withdrawn when the threshold voltage is undershot.		
Dependency:	Refer to: r0083, r0084, p3205, p3206 Refer to: F07914		

Note: The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

VECTOR	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Units group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PEM, REL	Scaling: -	Expert list: 1
	Min 0.01 [Arms]	Max 10000.00 [Arms]	Factory setting 1.00 [Arms]
Description:	Sets the threshold value for the zero current signal for the zero current monitoring. If the absolute current falls below the threshold value then r2199.6 is set to 1 after the delay time has expired. The bit is reset if the threshold value and the hysteresis are exceeded again.		
Dependency:	Refer to: r2199, p3208, p3209		
Note:	The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).		

p3208[0...n]	Zero current signal hysteresis / I_0_sig hyst		
VECTOR	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Units group: 6_2	Unit selection: p0505
	Not for motor type: ASM, PEM, REL	Scaling: -	Expert list: 1
	Min 0.01 [Arms]	Max 10000.00 [Arms]	Factory setting 1.00 [Arms]
Description:	Sets the hysteresis for the zero current signal for the zero current monitoring.		
Dependency:	Refer to: p3207, p3209		
Note:	The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).		
p3209[0...n]	Zero current signal delay time / I_0_sig t_del		
VECTOR	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Messages	Units group: -	Unit selection: -
	Not for motor type: ASM, PEM, REL	Scaling: -	Expert list: 1
	Min 0.00 [s]	Max 10.00 [s]	Factory setting 0.02 [s]
Description:	Sets the delay time for the zero current signal for the zero current monitoring.		
Dependency:	Refer to: p3207, p3208		
Note:	The monitoring function is only carried out for separately-excited synchronized motors (p0300 = 5). The monitoring is only carried out for speeds less than the speed threshold in p2161 (r2199.0 = 1).		
p3233[0...n]	Torque actual value filter, time constant / M_act_filt T		
SERVO (Extended sig), VECTOR (Extended sig)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: 8013
	P-Group: Messages	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0 [ms]	Max 1000000 [ms]	Factory setting 0 [ms]
Description:	Sets the time constant of the PT1 element to smooth the torque actual value. The smoothed actual torque is compared with the threshold values and is only used for messages and signals.		
p3235	Phase failure signal motor monitoring time / Ph_fail t_monit		
SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Messages	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0 [ms]	Max 2000 [ms]	Factory setting 320 [ms]
Description:	Sets the monitoring time for phase failure detection of the motor.		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	Monitoring is only effective for blocksize and booksize power units. The function can be switched out with p3235 = 0. For vector drives: The monitoring is automatically deactivated during the flying restart operation for a motor that is still rotating.		

p3236[0...n]		Speed threshold 7 / n_thresh val 7			
VECTOR	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3		
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: 8012		
	P-Group: Messages	Units group: 3_1	Unit selection: p0505		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min 0.00 [rpm]	Max 3000.00 [rpm]	Factory setting 100.00 [rpm]		
Description:	Sets the speed threshold value for the signal "speed deviation model/external" (BO: r2199.7).				
Dependency:	Refer to: r1443, r2169, r2199, p3237				
p3237[0...n]		Hysteresis speed 7 / n_hysteresis 7			
VECTOR	Can be changed: U, T	Calculated: CALC_MOD_LIM_REF	Access level: 3		
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: 8012		
	P-Group: Messages	Units group: 3_1	Unit selection: p0505		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min 0.00 [rpm]	Max 200.00 [rpm]	Factory setting 2.00 [rpm]		
Description:	Sets the hysteresis speed for the signal "speed deviation model/external" (BO: r2199.7).				
Dependency:	Refer to: r2199, p3236				
p3238[0...n]		OFF delay n_act_motor model = n_act external / t_del n_a = n_ext			
VECTOR	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: 8012		
	P-Group: Messages	Units group: -	Unit selection: -		
	Not for motor type: REL	Scaling: -	Expert list: 1		
	Min 0.0 [s]	Max 100.0 [s]	Factory setting 3.0 [s]		
Description:	Sets the OFF delay for the signal "speed deviation model/external in tolerance" (BO: r2199.7). The smoothed actual speed of the motor model r2169 is compared with the speed measured externally r1443 (threshold value p3236).				
Dependency:	Refer to: p3236, p3237				
p3290		Variable signaling function start / Var sig start			
SERVO	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned8	Dynamic index: -	Func. diagram: 5301		
	P-Group: -	Units group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min -	Max -	Factory setting 0010 bin		
Description:	Settings for start/stop and the comparison type for the variable signaling function.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activate function	Active	Not active	-
	01	Comparison with sign	With sign	Without sign	-

p3291	CI: Variable signaling function signal source / Var sig S_src		
SERVO	Can be changed: U, T Data type: Unsigned32 / Integer16 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 5301 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the variable signaling function.		
Dependency:	Refer to: p3292, p3293		
Note:	Re p3291 = 1: In this case, the signal source is defined using p3292 and p3293.		

p3292	Variable signaling function signal source address / Var sig S_src addr		
SERVO	Can be changed: U, T Data type: Unsigned32 P-Group: - Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 4 Func. diagram: 5301 Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the address of the signal source for the variable signaling function.		
Dependency:	Refer to: p3291		
Caution:	If an incorrect address and data type are set, then this can cause the software to crash.		

Note: This parameter should only be set for p3291 = 1.

p3293	Variable signaling function signal source data type / Var sig S_src type		
SERVO	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 7	Access level: 4 Func. diagram: 5301 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the data type of the signal source for the variable signaling function.		
Value:	0: Unknown 1: U8, Unsigned8 2: I8, Signed8 3: U16, Unsigned16 4: I16, Signed16 5: U32, Unsigned32 6: I32, Signed32 7: Float, FloatingPoint32		

Dependency: Refer to: p3291

Caution: If an incorrect address and data type are set, then this can cause the software to crash.

Note: This parameter should only be set for p3291 = 1.

r3294	BO: Variable signaling function output signal / Var sig outp_sig		
SERVO	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned8	Dynamic index: -	Func. diagram: 5301
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the output signal for the variable signaling function.		
Dependency:	Refer to: p3290, p3291, p3295, p3296, p3297, p3298		

p3295	Variable signaling function threshold value / Var sig thresh_val		
SERVO	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 5301
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-340.28235E36	340.28235E36	0.000
Description:	Sets the threshold value for the variable signaling function.		

p3296	Variable signaling function hysteresis / Var sig hyst		
SERVO	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 5301
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.000	340.28235E36	0.000
Description:	Sets the hysteresis for the variable signaling function.		

p3297	Variable signaling function pickup delay / Var sig t_pickup		
SERVO	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 5301
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	0 [ms]
Description:	Sets the pickup delay for the variable signaling function.		
Notice:	Values that do not comply with the following condition are treated just like value 0: Pickup delay (p3297) >= sampling time (p3299)		
Note:	For a value of 0, the pickup delay is disabled. The output signal is set if the condition for the 1 signal is fulfilled for longer than the selected time.		

p3298	Variable signaling function dropout delay / Var sig t_dropout		
SERVO	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 5301
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0 [ms]	10000 [ms]	0 [ms]
Description:	Sets the dropout delay for the variable signaling function.		
Notice:	Values that do not comply with the following condition are treated just like value 0: Dropout delay (p3298) >= sampling time (p3299)		

Note: For a value of 0, the dropout delay is disabled.
The output signal is reset if the condition for the 0 signal is fulfilled for longer than the selected time.

p3299	Variable signaling function, sampling time / Var sig t_sample		
SERVO	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 5301
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.000 [ms]	4.000 [ms]	4.000 [ms]
Description:	Sets the sampling time for the variable signaling function.		
Notice:	The following must apply for the setting: Sampling time (p3299) ≤ pickup delay (p3297), dropout delay (p3298)		
Note:	Only the following values can be set: 1.000, 2.000, 3.000, 4.000		

p3400	Infeed configuration word / INF config_word				
A_INF, S_INF	Can be changed: T	Calculated: -		Access level: 2	
	Data type: Unsigned16	Dynamic index: -		Func. diagram: 8940	
	P-Group: Closed-loop control	Units group: -		Unit selection: -	
	Not for motor type: -	Scaling: -		Expert list: 1	
	Min	Max		Factory setting	
	-	-		1010 bin	
Description:	Sets the configuration word of the infeed.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Smart Mode	On	Off	-
	01	Flat-Top Mode	On	Off	-
	03	Vdc controller	On	Off	-
	05	Line supply voltage sensing with VSM	On	Off	-
Dependency:	Refer to: p0210				
Note:	Re bit 00: In the Smart Mode, the DC link voltage is not controlled - however, infeed can still regenerate. The magnitude of DC link voltage depends on the current line supply voltage and the DC link load. For drive units belonging to the 400 V voltage class, for a drive unit supply voltage (p0210) greater than 415 V, infeed is always operated in the Smart Mode. This means that the 660 V limit can be maintained for the steady-state DC link voltage (p0280) up to a line supply voltage of 480 V. Re bit 01: If the Flat Top Mode is deactivated, switching losses are higher. This means that the full power is no longer continuously available. For p3400.0 = 1 or p1810.15 =1, this bit is not effective. Re bit 03: If the Vdc controller is switched out, overvoltage or undervoltage conditions occur in the DC link if no other voltage regulating component is located in the DC link. For p3400.0 = 1, this bit is not effective. Re bit 05: If a VSM is detected when commissioning the system, this bit is automatically set. When the bit is set, the line supply voltage input of the VSM must be connected (connected at the line side of line reactor). VSM: Voltage Sensing Module				

r3402 Infeed internal state / INF state int

A_INF, S_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dynamic index: -	Func. diagram: 8832, 8932
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	12	-
Description:	Displays the internal status of the infeed module.		
Value:	0: Initialization 1: Fault 2: No ON command 3: Offset measurement running 4: ON delay active 5: Precharg. running 6: Pulse enable missing 7: Synchronization running 8: Voltage ramp-up active 9: Operation 10: Shutdown running 11: Identification running 12: Transformer magnetization running		

r3402 Infeed status internal BIC / INF state int

B_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: Integer16	Dynamic index: -	Func. diagram: 8932
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	6	-
Description:	Displays the internal status of the infeed module.		
Value:	0: Initialization 1: Fault 2: No ON command 3: Offset measurement running 4: ON delay active 5: Precharg. running 6: Operation		

r3405.0...7 CO/BO: Status word infeed / INF ZSW

A_INF, S_INF, SERVO (Tech_ctrl)	Can be changed: -	Calculated: -	Access level: 2		
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 8828, 8928		
	P-Group: Closed-loop control	Units group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status word of the infeed.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Smart Mode active	Yes	No	-
	01	Vdc-ctrl active	Yes	No	-
	02	Phase failure detected	Yes	No	-
	03	Current limit reached	Yes	No	-
	04	Infeed operates in generator/motor mode	Regenerative mode	Motor mode	-
	05	Motor mode inhibited	Yes	No	-
	06	Generator mode inhibited	Yes	No	-
	07	DC link undervoltage alarm threshold undershot	Yes	No	-

Note:

Re bit 00:
Smart Mode is activated with p3400.0.

Re bit 01:
The DC link voltage closed-loop control is activated with parameters p3400.3 and p3513.

Re bit 02:
When phase failure is detected the bit is set and alarm A06205 is output.
The bit is reset for the following events:
- the infeed had reached the normal operating state again after a phase failure has been bypassed/buffered (p3402 = 9).
- the pulse enable is withdrawn due to a fault or powering down with OFF1/OFF2.

Re bit 03:
The present current limit is displayed in r0067.

Re bit 04:
An active current setting r0078 >= 0 means infeed operation in motor mode; an active current setting r0078 < 0 means regenerative operation in generator mode.

Re bit 05:
The motor mode inhibit is activated with p3532.

Re bit 06:
The generator mode inhibit is activated with p3533.

Re bit 07:
The alarm threshold is dependent on r0296 and the setting in p0279.

r3405.7 CO/BO: Status word infeed / INF ZSW

B_INF	Can be changed: - Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -

r3405.1 CO/BO: Status word DC-link control / UDC ZSW

VECTOR (Tech_ctrl)	Can be changed: - Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
--------------------	--	--	---

Description: Displays the status word for DC-link voltage control.

Bit field:	<table border="0" style="width: 100%;"> <tr> <th style="text-align: left;">Bit</th> <th style="text-align: left;">Signal name</th> <th style="text-align: left;">1 signal</th> <th style="text-align: left;">0 signal</th> <th style="text-align: left;">FP</th> </tr> <tr> <td>01</td> <td>Vdc-ctrl active</td> <td>Yes</td> <td>No</td> <td>-</td> </tr> </table>	Bit	Signal name	1 signal	0 signal	FP	01	Vdc-ctrl active	Yes	No	-		
Bit	Signal name	1 signal	0 signal	FP									
01	Vdc-ctrl active	Yes	No	-									

Note:

Re bit 01:
DC-link voltage control is disabled and enabled with p3513.

p3409	Infeed line frequency setting / INF f_line_mode		
A_INF, S_INF	Can be changed: T Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the mode to detect the line supply frequency.		
Value:	0: Line supply frequency setting 50/60 Hz off 1: Line supply frequency setting 50/60 Hz on		
Dependency:	Refer to: p0211, p0284, p0285 Refer to: A06350, A06351, F06500		
Note:	For p3409 = 1, the following applies: After operation has been enabled, the rated line supply frequency (p0211) is automatically set to a value of 50 Hz or 60 Hz corresponding to the currently measured frequency. This means that the parameter value of p0211 is, under certain circumstances, changed. For p3409 = 0, the following applies: The system does not change parameter p0211.		
p3410	Infeed identification method / INF Ident_type		
A_INF, S_INF	Can be changed: C2(1), T Data type: Integer16 P-Group: Closed-loop control Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 5	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 5
Description:	Sets the line and DC link parameter identification routine for the infeed module.		
Value:	0: Identification (Id) off 1: Activate identification (Id) 2: Set controller settings 3: Save identification and controller settings 4: Save identification and controller settings with L adaptation 5: Reset, save Id and controller setting with L adaptation		
Dependency:	Refer to: r3411, r3412, r3414, p3415, p3416, p3417, p3421, p3422, p3424, p3555, p3560, p3614 Refer to: A06400		
Notice:	For p3410 = 1, 3, 4, 5, alarm A06400 is output and designates that the selected identification will take place the next time that the pulses are enabled.		
Note:	When p3410 = 1 an identification run for the total inductance and DC link capacitance is initiated when the pulses are next enabled. The results are displayed in r3411 and r3412. If a Voltage Sensing Module (VSM) is connected, then the line inductance (r3414) is also measured. The infeed then goes into the ready for switching on state. For p3410 = 2, the data (r3411, r3412 and r3414) determined during the identification run (p3410 = 1) are transferred into p3421, p3422 and p3424. The control loop parameters are suitably scaled to achieve a rugged controller setting (p3425); the fast controller response (p3555[2]) and the current actual value smoothing (p3614) are preset. Calculations for the controller are then repeated. The user must save the new parameters in a non-volatile fashion in order to permanently select the new controller setting. When p3410 = 3 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is recalculated. All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.		

When p3410 = 4 an identification run for the inductance and DC link capacitance is initiated when the pulses are next enabled. Data determined during the identification (r3411, r3412, r3414) are used, as described under p3410 = 2 for the setting of p3421, p3422, p3424, p3425, p3555 as well as p3614, and the controller is recalculated. The line inductance identification is then repeated, if p3415[1] > p3514[0]. If the inductance measured the second time is lower than the first, the parameters are written to the current controller adaptation (p3620, p3622).. All of the parameters for the infeed module are then automatically stored in a non-volatile memory. The infeed continues to operate without any interruption with the new controller parameters.

For p3410 = 5, the same measurements and write operations are always carried out as for p3410 = 4. However, for the first identification run, initially the controller setting is reset by setting p3421 = p0223 + p0225, p3424 = p0225, p3422 = p0227 and p3425[.] = 100 %. Further, before the measurements are carried out, a brief identification run is executed to coarsely set the controller.

p3410 is automatically set to 0 after an identification run has been completed.

r3411[0...1] Infeed identified inductance / INF L ident			
A_INF, S_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min - [mH]	Max - [mH]	Factory setting - [mH]
Description:	Displays the identified total inductance. The value corresponds to the total inductance between the rigid line supply and the infeed input terminals.		
Index:	[0] = Run 1 [1] = Run 2		
Dependency:	Refer to: p3410		
Note:	The value measured in the first identification run is displayed in r3411[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421. The value measured in the second identification run (for p3410 = 4, 5) is displayed in r3411[1] - this value is used to set the current controller adaptation (p3622). For the inductance value of the line reactor, r3411 - r3414 applies.		
r3412[0...1] Infeed DC link capacitance identified / INF C_DClk ident			
A_INF, S_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min - [mF]	Max - [mF]	Factory setting - [mF]
Description:	Displays the identified total DC link capacitance.		
Index:	[0] = Run 1 [1] = Run 2		
Dependency:	Refer to: p3410		
Note:	The value measured in the first identification run (for p3410 = 1, 3, 4, 5) is displayed in r3412[0]. For p3410 = 1, 3, this value is transferred to p3422. The DC link capacitance is not measured at the second identification run. The total DC link capacitance of a DC link group comprises the sum of the sub-capacitances of all motor/infeed modules and the additional DC link capacitors.		

r3414[0...1]	Infeed, line supply inductance identified / INF t_line ident		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [mH]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [mH]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [mH]
Description:	Displays the identified line supply inductance. The value corresponds to the total inductance between the stiff line supply and the connection point of the Voltage Sensing Module (VSM).		
Index:	[0] = Run 1 [1] = Run 2		
Dependency:	Refer to: p3410		
Notice:	The value is only automatically determined for the line supply identification (p3410 > 0), if operation with a Voltage Sensing Module is selected (p3400.5 = 1). Otherwise, r3414 = 0 is displayed.		
Note:	The value measured in the first identification run is displayed in r3414[0] (for p3410 = 1, 3, 4, 5). This value is transferred to p3421. The value measured in the second identification run is displayed in r3414[1] (for p3410 = 4, 5). For the inductance value of the line reactor, r3411 - r3414 applies.		
p3415[0...1]	Infeed excitation current L identification / INF I_exc L_Ident		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 1.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 75.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20.00 [%]
Description:	Sets the magnitude of the excitation frequency for the L identification. The setting is made as a percentage of the maximum power unit current (r0209).		
Index:	[0] = Run 1 [1] = Run 2		
Dependency:	Refer to: p3410, r3411, p3421, p3620, p3622		
Notice:	To correctly identify the current level (p3410 = 4, 5) depending on the reactor inductance, the following must apply: p3415[0] < p3415[1] For A_INF booksize units, the following applies: The interrelationship between the reactor inductance and the current magnitude should be measured. Generally, the factory setting of p3415[0] and p3415[1] should be kept. For chassis units and S_INF booksize units, the following applies: Generally, there is only a very low inter-relationship between the reactor inductance and the current magnitude. This means that for the factory setting p3415[0] = p3415[1] = 20 %, i.e. run 2 is not executed.		
Note:	The reactive current for identification run 1 is set in p3415[0] (basic controller setting). The reactive current for identification run 2 is set in p3415[1] (adaptation of the current controller when reducing the reactor inductance with increasing current magnitude).		

p3416	Infeed excitation amplitude C identification / INF exc_amp C_Id		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.10 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 20.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2.00 [%]
Description:	Sets the level of the excitation frequency for identification of the total DC link capacitance. The amplitude is indicated as a percentage of the DC voltage setpoint ($V_{dc} = p0210 * p3510$).		
Dependency:	Refer to: p3410, r3412, p3422		
p3417	Infeed excitation frequency C identification / INF f_exc C_ID		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 10.00 [Hz]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 200.00 [Hz]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 50.00 [Hz]
Description:	Sets the level of the excitation frequency for identification of the total DC link capacitance.		
Dependency:	Refer to: p3410, r3412, p3422		
p3421	Infeed inductance / INF L		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.001 [mH]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2000.000 [mH]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000 [mH]
Description:	Sets the total effective inductance for the closed-loop current control from the sum of the line supply inductance and inductance of the line reactor. This parameter is preset to the sum of p0223 and p0225.		
Dependency:	Refer to: p0223, p0225, p3410, p3425, p3614, p3622		
Note:	The controller setting is derived from this value and p3425. The value can be automatically determined using the identification run (p3410). For a parallel circuit, the value corresponds to the inductance of a power unit. For the inductance value of the line reactor, p3421 - p3424 applies.		
p3422	Infeed DC link capacitance / INF C_DCL		
A_INF, S_INF, SERVO (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.20 [mF]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2000.00 [mF]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2.00 [mF]
Description:	Sets the DC link capacitance for the closed-loop voltage control. This value is preset with p0227.		
Dependency:	Refer to: p0227, p3410, p3425		
Note:	The controller setting is derived from this value and p3425. A suitable value can be automatically determined using the identification run (p3410).		

p3422 DC-link capacitance, total / C_DC tot

VECTOR (Tech_ctrl)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.20 [mF]	Max 2000.00 [mF]	Factory setting 2.00 [mF]
Description:	Sets the total DC link capacitance for closed-loop voltage control. The capacitance of one power unit is pre-assigned to this value. The value should be adapted according to the number of power units.		
Note:	The controller setting for the DC-link voltage controller is derived from this value.		

p3424 Infeed, line supply inductance / INF L_line

A_INF, S_INF	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.001 [mH]	Max 1000.000 [mH]	Factory setting 0.001 [mH]
Description:	Sets the line supply inductance. This parameter is preset with p0225.		
Dependency:	Refer to: p0223, p0225, p3410, p3425, p3622		
Note:	The controller setting is derived from this value and p3425. The value can be automatically determined using the identification (p3410) if operation with a Voltage Sensing Module is selected. Otherwise, p3424 is set to p3421 - p0223.		

p3425[0...1] Infeed control loop parameter scaling / INF par scal

A_INF, S_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 1.00 [%]	Max 1000.00 [%]	Factory setting 100.00 [%]
Description:	Sets the scaling factors for controller parameters p3421, p3422 and p3424.		
Index:	[0] = Scaling, inductance [1] = Scaling, capacitance		
Dependency:	Refer to: p3410, p3421, p3422, p3424, p3614		
Note:	p3425 is automatically set to the optimum value when setting the control parameters using the line supply data identification p3410 >= 2. As the line supply inductance (p3424) increases in comparison to the total inductance (p3421), lower values must be selected for p3425. This means that the control is adapted to weak line supplies with high relative short-circuit voltage u_k or high line supply inductance (also refer to p3614). The scaled control loop parameters become effective for closed-loop control, i.e. the products $p3421 * p3425[0]$ and $p3422 * p3425[1]$ represent the controller setting.		

p3440	Smart Mode configuration / Smart Mode config																							
A_INF, S_INF	Can be changed: T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0001 bin																					
Description:	Sets the configuration of the Smart Mode.																							
Bit field:	<table> <tr> <th>Bit</th><th>Signal name</th><th>1 signal</th><th>0 signal</th><th>FP</th></tr> <tr> <td>00</td><td>Soft Pulse Mode</td><td>On</td><td>Off</td><td>-</td></tr> <tr> <td>01</td><td>Feedback control</td><td>On</td><td>Off</td><td>-</td></tr> <tr> <td>02</td><td>Deselect automatic line identification after POWER ON</td><td>Yes</td><td>No</td><td>-</td></tr> </table>	Bit	Signal name	1 signal	0 signal	FP	00	Soft Pulse Mode	On	Off	-	01	Feedback control	On	Off	-	02	Deselect automatic line identification after POWER ON	Yes	No	-			
Bit	Signal name	1 signal	0 signal	FP																				
00	Soft Pulse Mode	On	Off	-																				
01	Feedback control	On	Off	-																				
02	Deselect automatic line identification after POWER ON	Yes	No	-																				
Note:	Re bit 00: When the pulsed mode for Smart Mode is deactivated, when regenerating, higher phase current gradients occur. Re bit 01: When feedback control is activated, the transistors are only activated for feedback. This reduces switching losses and the DC-link voltage reaches higher values (higher output voltage for the motors). In Version v04.30.xx a value of 1 is permissible for this bit for S120combi units only. Re bit 02: When automatic line identification is selected, the inductance and DC-link capacitance values are calculated on the first pulse enable after each POWER ON and saved in p3448[0...1]. In the case of manual input of p3448[0...1], automatic line identification must be deselected. In Version v04.30.xx a value of 1 is permissible for this bit for S120 combi units only.																							
p3441[0...1]	Smart Mode Vdc ctrl Kp/Tn / SLM Vdc_ctrl Kp/Tn																							
A_INF, S_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]																					
Description:	Sets the standardized proportional gain (index 0) and the integral time (index 1) for the DC-link voltage controller (Vdc controller) in Smart Mode.																							
Index:	[0] = Proportional gain [1] = Integral time																							
Note:	A value of 100% corresponds to the basic setting derived from loop control parameters (p0115, p3409, p3448[1]).																							
p3442[0...1]	Smart Mode smoothing times / SLM t_smooth																							
A_INF, S_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 20.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 0.25 [ms] [1] 1.00 [ms]																					
Description:	Sets the time constant for PT1 filtering of the DC-link voltage for the Vdc controller (index 0) and the monitored DC-link load current (index 1) in Smart Mode.																							
Index:	[0] = DC-link voltage actual value (r3445) [1] = Monitored DC-link load current (r3446[2])																							
Dependency:	Refer to: r3445, r3446																							

p3443[0...1]	Smart Mode line commutation current threshold values / SLM line com I_thr		
A_INF, S_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 100.00 [%] [1] 200.00 [%]
Description:	Sets the current threshold values for the deactivation (index 0) and activation (index 1) of line commutation in Smart Mode.		
Index:	[0] = Deactivating [1] = Activating		
Note:	A value of 100% corresponds to the minimum feedback load current derived from the loop control parameters (p0210, p0211, p3409, p3448[0], p3432) without infeed components. To avoid frequent changeovers in operation close to the changeover point, the value for activation (index 1) must be significantly higher than the value for deactivation (index 0).		
p3444[0...1]	Smart Mode voltages / SLM voltages		
A_INF, S_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 105.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 90.00 [%] [1] 100.50 [%]
Description:	Sets the minimum line voltage for regenerative feedback or the DC-link voltage setpoint in Smart Mode.		
Index:	[0] = Minimum line voltage for feedback [1] = DC-link voltage setpoint		
Note:	Re index 0: A value of 100% corresponds to the supply voltage set in p0210. If the minimum line voltage is undershot, feedback is deactivated to prevent the DC-link voltage decaying in the event of a significant system voltage dip. Re index 1: A value of 100% corresponds to the rectified value of the current line voltage. The value must be greater than or equal to 100%.		
r3445[0...1]	Smart Mode voltages display / SLM voltages disp		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [V]	Calculated: - Dynamic index: - Units group: 5_2 Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Displays the various voltages in Smart Mode.		
Index:	[0] = DC link voltage smoothed [1] = DC-link voltage setpoint		
Dependency:	Refer to: r0070, p3442		
Note:	Re index 0: Displays the DC-link voltage actual value measured and smoothed with p3442[0]. The smoothed value is used for the DC-link voltage controller (Vdc controller) in Smart Mode. The DC-link voltage is also available unsmoothed (r0070). Re index 1: Displays the DC-link voltage setpoint for the DC-link voltage controller (Vdc controller) in Smart Mode.		

r3446[0...2]	Smart Mode currents / SLM currents		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: - Units group: 6_4 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the various current values in Smart Mode.		
Index:	[0] = DC-link current setpoint [1] = Vdc controller I component [2] = Monitored DC-link load current		
Note:	Re index 0: Displays the DC-link current setpoint requested by the DC-link voltage controller (Vdc controller) in Smart Mode. Re index 1: Displays the I component of the DC-link voltage controller (Vdc controller). Re index 2: Displays the monitored DC-link load current.		
r3447	Smart Mode OFF angle / SLM phi_OFF		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°]	Calculated: - Dynamic index: - Units group: - Scaling: p2005 Max - [°]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [°]
Description:	Displays the OFF angle requested by the DC-link voltage controller (Vdc controller) in Smart Mode.		
Note:	A value = 30 ° deactivates feedback. A value = 0 ° requests maximum feedback (line commutation).		
p3448[0...1]	Smart Mode effective inductance/DC-link capacitance / SLM L/C effect		
A_INF, S_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 10.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10000.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 110.00 [%] [1] 100.00 [%]
Description:	Sets the effective inductance or DC-link capacitance in Smart Mode.		
Index:	[0] = Effective inductance with ref. to p0223 [1] = Effective DC-link capacitance with ref. to p0227		
Notice:	p3448[0] is used in the calculation of the reference value of p3443 and in the controller models. p3448[1] is used in the calculation of the reference value of p3441 and in the controller models. When automatic line identification is selected (p3440.2 = 0), the following applies: - the inductance and DC-link capacitance values are calculated on the first pulse enable after each POWER ON and saved in p3448[0...1]. - values entered manually are overwritten after the next POWER ON. When automatic line identification is deselected (p3440.2 = 1), the following applies: - the inductance and DC-link capacitance values have to be entered manually.		

Note:

Re index 0:
A value of 100% corresponds to the inductance parameterized in p0223.
For a parallel circuit, the value corresponds to the inductance of a power unit.

Re index 1:
A value of 100% corresponds to the capacitance parameterized in p0227.
The value includes the capacitances of all modules connected on the DC link.

r3452 Infeed PLL status / INF PLL status

A_INF, S_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 bin	0111 bin	-

Description: Displays the status of the line supply PLL.

Value:

0:	Initialization running
1:	Error when synchronizing
2:	Line analysis
3:	Calculation line data
4:	Pulse enable missing
5:	PLL calculation
6:	Final status controlled / Smart Mode
7:	Reserved

p3458[0...1] Infeed PLL smoothing time / INF PLL t_smooth

A_INF, S_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.0 [ms]	1000.0 [ms]	[0] 23.1 [ms] [1] 9.1 [ms]

Description: Sets the smoothing time for the line supply PLL.

Index:

[0]	= Encoderless operation line supply frequency smoothing time
[1]	= VSM operation line supply frequency smoothing time

Note: It may be necessary to reduce the smoothing time for weak line supplies with high frequency fluctuations. There is otherwise a risk of brief orientation errors and the infeed could fail.

r3460 Infeed PLL system deviation / INF PLL ctrl_dev

A_INF, S_INF	Can be changed: -	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]

Description: Displays the PLL system deviation.

r3461	Infeed PLL system deviation after filtering / INF PLL ctrl_devSm		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [°]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [°]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [°]
Description:	Displays the PLL system deviation after filtering.		
Dependency:	Refer to: p3458		
p3463	Infeed, line angle change, phase failure detection / INF phi ph_fail		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -180.0 [°]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 180.0 [°]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 15.0 [°]
Description:	If the line supply angle (angle between the line supply phases) suddenly changes by this value, then a phase failure is assumed. The pulses are then inhibited for 10 ms.		
Dependency:	Refer to: A06205		
r3467[0...1]	CO: Infeed current alpha/beta line filter / INF I a/b filter		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [A]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [A]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [A]
Description:	Displays the line current at the input terminals of the line filter in alpha/beta components.		
Index:	[0] = Alpha [1] = Beta		
r3468[0...1]	CO: Infeed voltage alpha/beta line filter / INF V a/b filter		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [V]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the line supply voltage at the input terminals of the line filter in alpha/beta components.		
Index:	[0] = Alpha [1] = Beta		
Note:	The input terminals of the line filter form, for infeeds, the connection point of the Voltage Sensing Module (VSM) to measure the line supply voltage. For operation with VSM (p3400.5 = 1), the following applies: The voltage measured values r3661 and r3662, transformed into the alpha/beta system are displayed in r3468. For encoderless operation without VSM (p3400.5 = 0), the following applies: The estimated values of the voltages from the line supply model of the PLL transformed into the alpha/beta system are displayed in r3468.		

p3469[0...n]	Latch delay time correction, zero crossover detection / t_latch corr PLL		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -10000.0 [μs]	Calculated: - Dynamic index: PDS, p0120 Units group: - Scaling: - Max 10000.0 [μs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.0 [μs]
Description:	Calibration value for the RC filter of the zero crossover detection of the line supply voltage in the power unit. When p3469 = 0, a new calibration is performed the next time identification is carried out with p3410 = 4 or 5.		
Note:	The calibration value is stored in the EEPROM of the power unit because it is a characteristic of the power unit.		
r3470	Infeed active current filter / INF I_act filter		
A_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Arms]	Calculated: - Dynamic index: - Units group: 6_2 Scaling: - Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the active current requirement due to the line filter.		
Dependency:	Refer to: r0038, p0221, p0222		
Note:	With respect to the line supply, the sum of the active currents of the power unit (p0078) and line filter (p3470) are effective. The active current demand of the line filter is taken into account when calculating the power factor (r0038). The magnitude of the line filter active current depends on the capacitance (p0221) and the resistance (p0222) of the line filter.		
r3471	Infeed reactive current filter / INF I_reactiveFilt		
A_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Arms]	Calculated: - Dynamic index: - Units group: 6_2 Scaling: - Max - [Arms]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the reactive current requirement as a result of the line filter. The reactive current requirement of a line filter is covered by the controlled infeed/regenerative feedback so that the converter always operates with a power factor of 1 compared to the line.		
Dependency:	Refer to: r0038, r0075, r0076, p0221		
Note:	With respect to the line supply, the sum of the reactive currents of the power unit (p0076) and line filter (p3471) are effective. The reactive current requirement of the line filter is taken into account when calculating the power factor (r0038). The amount of the reactive current depends on the capacitance (p0221) of the line filter that is automatically parameterized when a line filter is selected (p0220). If the line phases are reversed and the line voltage therefore has a negative orientation (r0066 < 0), it should be noted that the sign of the reactive current is reversed.		

p3472[0...4]	Line supply PLL line supply voltage smoothing time / Line PLL V_I t_{sm}		
A_INF, S_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 1.0 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 30000.0 [ms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 200.0 [ms] [1] 100.0 [ms] [2] 5000.0 [ms] [3] 8.0 [ms] [4] 8.0 [ms]
Description:	Sets the smoothing time of the line supply voltage for the line supply PLL.		
Index:	[0] = Encoderless operation line supply voltage smoothing time [1] = VSM operation line supply voltage smoothing time [2] = Detection line supply undervoltage smoothing time [3] = Detection line supply overvoltage smoothing time [4] = Detection line supply voltage step smoothing time		
Dependency:	Refer to: p3400		
Note:	For the pre-control of the line supply voltage, a smoothed value of the line supply voltage is used in the closed-loop control. p3472[0]: Sets the PT1 time constant to smooth the line supply voltage for operation without VSM (p3400.5 = 0). p3472[1]: Sets the PT1 time constant to smooth the line supply voltage for operation with VSM (p3400.5 = 1). p3472[2]: Sets the smoothing time constant to slowly detect a line supply undervoltage (F6100). p3472[3]: Sets the smoothing time constant to quickly detect line supply undervoltages for phase failure (A6205). p3472[4]: Sets the smoothing time constant to quickly adapt the line supply pre-control for line supply voltage steps (p0286).		
p3480	Infeed modulation depth limit / INF mod_depth lim		
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 50.0 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 110.0 [%]	Access level: 3 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 97.0 [%]
Description:	Sets the maximum steady-state modulation depth. When this limit is reached, the DC link voltage is boosted to maintain the control margin. This means that the control reserve is maintained.		
Dependency:	Refer to: p3481, r3485		
p3481	Infeed standby controller dynamic response / INF res_ctrl dyn		
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.0 [ms]	Access level: 4 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting 7.5 [ms]
Description:	Sets the dynamic response of the reserve controller for the modulation depth. As the smoothing time increases, the response of the DC link voltage tracking becomes slower.		
Dependency:	Refer to: p3480, r3485		

r3485	Infeed standby controller output / INF res_ctrl outp		
A_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [V]	Calculated: - Dynamic index: - Units group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 8940 Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Displays the reserve controller output for the modulation depth. The DC link voltage is increased by this voltage value - the summed setpoint for the DC link voltage is output in r0088. The summed setpoint is limited to the maximum steady-stage DC link voltage (p0280).		
Dependency:	Refer to: p3480, p3481		
p3490	Infeed OFF command delay time / INF t_del OFF		
A_INF, B_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000000.0 [ms]	Access level: 2 Func. diagram: 8732, 8832, 8932 Unit selection: - Expert list: 1 Factory setting 0.0 [ms]
Description:	Sets the delay time for the ON/OFF1 command of the infeed. After ON/OFF1 = 0 the infeed remains in operation for the specified time		
Dependency:	Refer to: p0840		
Notice:	The ON/OFF1 command of the infeed can be interrupted.		
Note:	This parameter is only relevant if a Motor Module and the infeed are controlled by the same OFF command. In this case, the delay time and the stop ramp time of the motor can be coordinated with one another.		
p3491	Infeed I-offset measurement monitoring time / INF I_offs t_monit		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 65000 [ms]	Access level: 4 Func. diagram: 8832, 8932 Unit selection: - Expert list: 1 Factory setting 2000 [ms]
Description:	Sets the monitoring time for the current-offset measurement of the power unit. The time is started with the normal end of the measurement. If the measurement is invalid and if no valid measurement can be taken within the monitoring period (phase currents too high), an appropriate message is generated.		
Note:	Set this parameter to 0 to allow variations in the delay when running-up.		
p3492	Infeed, line supply undervoltage delay time / INF V_line t_del		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0 [s]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 300 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [s]
Description:	Sets the delay time for shutdown due to a line supply undervoltage condition (A06100). After the fault occurs, the power unit is only tripped (shut down) after this delay has expired. If the fault is removed during this design time, then the power unit is not tripped (shut down).		
Dependency:	Refer to: p0283 Refer to: F06100		

Note: The degree of ruggedness of the infeed with respect to fluctuations in the line supply voltage can be increased by parameterizing this delay value.
However, the following should be noted:

- the infeed power decreases proportionally (linearly) with the line supply voltage.
- when other components are connected, for low line supply voltage, operating faults or damage can occur. In this case, the specifications of the connected electrical components should always be carefully observed.

p3508 Infeed step-up factor maximum / Step-up factor max

A_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 1.60	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3.00	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.60
--------------	--	---	--

Description: Sets the maximum permissible step-up factor for the power unit used in conjunction with the line filter parameterized in p0220[0].

Dependency: Refer to: p0210, p0220, p3510

Note: The maximum step-up factor determines the maximum ratio between the DC link voltage setpoint (p3510) and the unit supply voltage (p0210).
The input of the DC link voltage setpoint (p3510) is limited corresponding to the permissible step-up factor (p3508):
 $p3510 \leq p0210 * p3508$.
 Presetting values:
 380 ... 480 V booksize units without Active Interface Module: 1.60
 380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2.00
 380 ... 480 V chassis units: 2.00
 500 ... 690 V chassis units: 2.00
 Maximum values:
 380 ... 480 V booksize units without Active Interface Module: 1.60
 380 ... 480 V booksize units with Active Interface Module (p0220 = 41 ... 45): 2.00
 380 ... 480 V chassis units: 2.00
 500 ... 690 V chassis units: 2.00
 When the filter setting (p0220) is changed, then the setting of the maximum step-up factor (p3508) is also automatically adapted.

p3510 Infeed DC link voltage setpoint / INF Vdc setp

A_INF, SERVO (Tech_ctrl)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 100.00 [V]	Calculated: - Dynamic index: - Units group: 5_2 Scaling: p2001 Max 1600.00 [V]	Access level: 2 Func. diagram: 1774, 8940 Unit selection: p0505 Expert list: 1 Factory setting 600.00 [V]
-------------------------------------	---	--	---

Description: Sets the setpoint for the DC link voltage.

Dependency: Refer to: p0210, p0280, p3400, p3508, p3511

Warning: Before increasing the voltage limit for pulsed operation of a controlled booksize infeed with line supply voltages p0210 > 415 V it should be checked whether the motors connected to the DC link are specified for the higher motor voltages.
The warning information associated with p0210 must be carefully observed.

Note: When the Smart Mode is activated (p3400.0 = 1) the DC link voltage is not regulated, i.e. the value entered here is in this case not effective.

The permissible range of the DC link voltage depends on the parameterized unit supply voltage (p0210) and the permissible, maximum continuous DC link voltage (p0280).

In voltage-controlled operation (p3400.0 = 0) the following applies:

$p3510 \geq 1.42 \cdot p0210$ and
 $p3510 \leq p3508 \cdot p0210$ and
 $p3510 \leq p0280$.

In the Smart Mode (p3400.0 = 1) the following applies:

The setpoint p3510 for the DC link voltage control is inactive. In order to permit an adapted display, deviating from voltage-controlled operation, the lower limit p3510 is $\geq 1.2 \cdot p0210$.

Description:	Sets the filter time for power pre-control.		
Dependency:	Refer to: p3520		

p3530 Infeed current limit motoring / INF I_limit mot

A_INF	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 8940
	P-Group: Closed-loop control	Units group: 6_2	Unit selection: p0505
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 1.00 [Arms]	Max 100000.00 [Arms]	Factory setting 10000.00 [Arms]
Description:	Sets the motoring limit for the active line current. The currently effective current limit is displayed in r0067[0].		
Dependency:	Refer to: r0067, p3532		
Caution:	If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power. Operating faults of the infeed can occur due to the resulting DC link undervoltage.		
Notice:	For self-commutated infeeds, the DC link voltage decreases if more power is drawn from the DC link by the connected load than can be supplied by the line because of the power unit maximum current or a limit in p3530. If the DC link voltage decreases down to the rectified value, then the complete current - necessary to cover the required active power - flows, uncontrolled into the rectifier circuit via the diodes. This is the reason that, for physical reasons, the value in p3530 cannot act as current limit that is always maintained. The value forms a current threshold from which point onwards the DC link energy is used as buffer for brief power fluctuations.		

p3531 Infeed current limit regenerative / INF I_limit regen			
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -100000.00 [Arms]	Calculated: - Dynamic index: - Units group: 6_2 Scaling: - Max -1.00 [Arms]	Access level: 3 Func. diagram: 8940 Unit selection: p0505 Expert list: 1 Factory setting -10000.00 [Arms]
Description:	Sets the limit for the active line supply current when regenerating. The currently effective current limit is displayed in r0067[1].		
Dependency:	Refer to: r0067, p3533		
Caution:	If this limit is selected lower than the maximum current permissible for the power unit (r0067), the infeed can no longer provide its full controlled power. This can result in an overvoltage condition in the DC link.		
Notice:	For self-commutated infeeds, the DC link voltage increases if more power is input to the DC link through the connected source than can be fed to the line because of the maximum power unit current or a limit in p3531 If the DC link voltage exceeds the permissible threshold (p0297), defined by the hardware, then the unit is tripped due to overvoltage. The value in p3531 represents a current limit that is always maintained - however, this can result in overvoltage conditions in the DC link. The value in p3531 represents a current limit from which point onwards the capacitance of the DC link can be used as buffer for brief power fluctuations.		

p3532 BI: Infeed, inhibit motoring / INF mot mode inhib			
A_INF	Can be changed: T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 8920 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for inhibiting the motor mode of the infeed.		
Dependency:	Refer to: r3405, p3530		
Notice:	If the motor mode is inhibited although power is withdrawn from the DC link, then the DC link voltage drops to the rectified value. In this state, the DC link is post-charged through the diodes and motoring power is fed to the power unit in spite of the motoring inhibit. The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The inhibit only becomes active after operation has been enabled and the Vdc has been ramped up (r0863.0 = 1).		

p3533 BI: Infeed, inhibit generator mode / INF gen mode inhib			
A_INF, S_INF	Can be changed: T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 8820, 8920 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to inhibit the generator mode of the infeed.		
Dependency:	Refer to: r3405, p3531		
Notice:	The DC link voltage will increase if generator mode is inhibited even though power is being regenerated into the DC link. The parameter may be protected as a result of p0922 or p2079 and cannot be changed.		
Note:	The inhibit only becomes active after operation has been enabled and the Vdc has been ramped up (r0863.0 = 1).		

r3534	Infeed line filter maximum current / INF filter I_max		
A_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min - [Arms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [Arms]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Arms]
Description:	Displays the maximum permissible current for the line filter set using p0220[0].		
Dependency:	Refer to: p0220		
Note:	The currently effective maximum current for the power unit is displayed in r0067. The value in r0067 is obtained as minimum of the current limits in r0209, p3530 ... r3534.		
r3554	Infeed Vdc controller integral component / INF Vdc_ctr I_comp		
A_INF, SERVO (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Arms]	Calculated: - Dynamic index: - Units group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 2 Func. diagram: 8940 Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the integral action component of the DC link voltage controller (Vdc controller).		
r3554	Vdc controller integral component / Vdc_ctr I_comp		
VECTOR (Tech_ctrl)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Arms]	Calculated: - Dynamic index: - Units group: 6_2 Scaling: p2002 Max - [Arms]	Access level: 2 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [Arms]
Description:	Displays the integral action component of the DC link voltage controller (Vdc controller).		
p3555[0...5]	Infeed Vdc controller integral component fast intervention / Vdc_ctr I-compFast		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 200.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 2.00 [%] [1] 102.00 [%] [2] 0.00 [%] [3] 5.00 [%] [4] 100.00 [%] [5] 0.00 [%]
Description:	Sets the fast Vdc controller intervention for a step-like decrease of the DC link voltage due to a high motor load of the infeed. The Vdc controller fast intervention is deactivated for p3555[5] = 0 % or p3560 < 100% or p0225 > 0.5 * p0223. For a line supply and DC link identification (p3410 >= 2) the level of the fast controller intervention (p3555[2]) is automatically adapted to the line supply inductance.		

Recommend.:	Precise system knowhow is required when correctly changing this parameter! - generally, the fast controller intervention is used to improve the control behavior for high-speed load changes. The function can therefore always be deactivated with p3555[5] = 0 % if no peak load duty cycles are required in the application. - using p3555[0], the calculation of the modulation depth is determined in the case of high system deviations also when the controller intervention is deactivated. This is the reason that p3555[0] should generally not be changed.
Index:	[0] = Intervention threshold 1: Vdc deviation from the setpoint [1] = Intervention threshold 2: Vdc difference to the rectified value [2] = Fast intervention automatic scaling [3] = Fast intervention pre-control [4] = Fast intervention timeout [5] = Fast intervention manual scaling
Note:	p3555[0]: Vdc system deviation as a percentage of the setpoint of the DC link voltage (first condition to initiate fast controller intervention). The threshold is also used to internally change over the modulation depth calculation for high system deviations and should therefore generally not be changed! p3555[1]: Vdc threshold as a percentage of the rectified value of the current line supply voltage (second condition to initiate the fast controller intervention). Both threshold conditions must be fulfilled to initiate the controller intervention. p3555[2]: Percentage overall level of the fast intervention (scaling factor). For a line supply identification with p3410 >= 2, the factor is automatically adapted or, for weak line supplies with a high inductance, set to 0. p3555[3]: Percentage correction of the pre-control for a fast voltage dip (dead time compensation). p3555[4]: Percentage minimum time between controller interventions (100% corresponds to 100 ms). If high load change frequencies occur with the application, the minimum time between two controller interventions can be reduced using p3555[4]. p3555[5]: Percentage overall level of the fast intervention (scaling factor). With p3555[5] = 0, the fast controller intervention is inhibited. For weak line supplies with a high inductance, it makes sense to deactivate the fast intervention.

	Not for motor type: -	Scaling: -	Expert list: 1
	Min 40 [ms]	Max 1000 [ms]	Factory setting 100 [ms]
Description: Sets the ramp time for the DC link voltage (Vdc) when powering up and powering down.			
Powering up (pulses enabled, r0898.3 = 1):			
During this time, the DC link voltage is increased from the rectifier value after pre-charging to the voltage setpoint (p3510, p3511). The voltage setpoint is increased, when necessary, so that the modulation depth reserve (p3481) is maintained. The reactive current is set to the value 0 while ramping.			
Powering down (inhibit pulses, r0898.3 = 0):			
During this time, the DC link voltage is reduced to the rectified value ($\sqrt{2}$ * line supply voltage). The reactive current value is set to the value 0 when the ramp starts.

p3610	Infeed reactive current fixed setpoint / INF I_reactv F_set		
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -10000.0 [Arms]	Calculated: - Dynamic index: - Units group: 6_2 Scaling: - Max 10000.0 [Arms]	Access level: 2 Func. diagram: 1774, 8946 Unit selection: p0505 Expert list: 1 Factory setting 0.0 [Arms]
Description:	Sets the fixed setpoint for the reactive current. The permissible maximum absolute value for the reactive current is the device rated current r0207. The following applies: $ p3610 \leq r0207$		
Dependency:	Refer to: r0029, r0075, r0076		
Notice:	If the line phases are reversed and the line voltage therefore has a negative orientation ($r0066 < 0$), it should be noted that the sign of the reactive current is also reversed. The negated value of p3610 is effective in display parameters r0029, r0075, r0076 as appropriate.		
Note:	p3610 < 0: Inductive reactive current is produced, i. e. the current follows the voltage. p3610 > 0: Capacitive reactive current is produced, i. e. the current leads the voltage. This definition applies to 3AC voltage systems both with positive rotational orientation ($r0066 > 0$) and for negative rotational orientation ($r0066 < 0$).		
p3611	CI: Infeed reactive current supplementary setpoint / INF I_reactv Z_set		
A_INF	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: p2002 Max -	Access level: 2 Func. diagram: 8946 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the supplementary setpoint of the reactive current.		
p3614	Infeed current actual value filter smoothing time / INF I_act t_sm		
A_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2.000 [ms]	Access level: 3 Func. diagram: 8950 Unit selection: - Expert list: 1 Factory setting 0.000 [ms]
Description:	Sets the time constant for the PT1 filtering of the active current actual value and reactive current actual value.		
Note:	The PT1 filter with a clock cycle dead time can be used to stabilize the closed-loop current control for extremely weak line supplies with higher relative short-circuit voltage u_k . The current actual value filter is deactivated with $p3614 = 0$. For an automatic controller setting with $p3410 \geq 2$, the current actual value filter is automatically preset.		
p3615	Infeed current controller P gain / INF I_ctrl Kp		
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [%]	Access level: 2 Func. diagram: 8946 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the normalized P gain for closed-loop current control of the infeed.		
Note:	A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3422).		

p3617	Infeed current controller integral time / INF I_ctrl Tn

r3619	Infeed reactive current controller integral component / INF I_reactv_ctrTn		
A_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [Vrms]	Calculated: - Dynamic index: - Units group: 5_1 Scaling: p2001 Max - [Vrms]	Access level: 2 Func. diagram: 8946 Unit selection: p0505 Expert list: 1 Factory setting - [Vrms]
Description:	Displays the integral action component of the reactive current controller.		
p3620	Infeed current controller adaptation lower application threshold / INF I_adptLowThrsh		
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 40.00 [%]
Description:	Sets the switch-in threshold for the current controller adaptation. The value refers to the maximum power unit current (r0209). From the starting threshold onwards, the inductance value (p3421) used for current control is reduced linearly as a function of the current value. The inductance value for the maximum power unit current is therefore $p3421 * p3622$.		
Dependency:	Refer to: p3410, p3415, p3622		
Note:	The parameter can be set automatically using the line supply identification (p3410 = 4, 5) (also refer to p3622). Pre-requisite for a reliable measurement of p3622 is that the current magnitude for run 2 (p3415[1]) is at least 10 % higher than the current magnitude for run 1 of the line supply identification. Otherwise, the measurement result is rejected. In the case of a correct measurement, p3620 is set to 80% of the current magnitude for run 1 (p3415[0]). For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415. For booksize power units, p3620 and p3622 are automatically adapted with the then valid default setting of the line identification p3415.		

p3622	Infeed current controller adaptation reduction factor / INF I_adapt factor		
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: REL Min 0.01 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 85.00 [%]
Description:	Sets the inductance of the line reactor at the maximum power unit current (r0209) as a percentage of the inductance (p3421) at the application threshold (p3620).		
Dependency:	Refer to: p3410, p3415, p3620		
Note:	The parameter for a line supply identification (p3410 = 4, 5) automatically optimized, if the following applies: p3415[1] - p3415[0] > 10%. Otherwise, the measurement result is rejected. For chassis power units, it is generally not necessary to adapt p3620 and p3622 to the characteristics of the line supply. However, when required, the current controller adaptation can be optimized by selecting suitable current magnitudes for p3415. For booksize power units, p3620 and p3622 are automatically adapted with the then valid default setting of the line identification p3415.		
p3624[0...1]	Infeed harmonics controller order / INF harm_ctr order		
A_INF	Can be changed: T Data type: Unsigned16 P-Group: Closed-loop control Not for motor type: - Min 5	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 13	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 5 [1] 7
Description:	Sets the Order of the line harmonics for the current harmonics controller. p3624[0]: Order of the line harmonics for the first harmonics controller. p3624[1]: Order of the line harmonics for the second harmonics controller.		
Dependency:	Refer to: p3625, r3626		
Note:	Harmonics in the line supply voltage can cause harmonics in the converter current. These types of current harmonics can be reduced by activating additional controller modules. Example: For a 50 Hz line supply harmonics at 250 Hz in the phase currents can be reduced by activating a harmonic controller with Order 5 (p3624[0] = 5).		
p3625[0...1]	Infeed harmonics controller scaling / INF harm_ctrl scal		
A_INF	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.0 [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 300.0 [%]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.0 [%]
Description:	Sets the gain of the harmonics controller. p3625[0]: Gain of the first harmonics controller p3625[1]: Gain of the second harmonics controller 0 %: Controller is deactivated 100 %: Controller is activated with default gain setting		
Dependency:	Refer to: p3624, r3626		
Note:	The harmonics controller corrects the power unit voltages so that the line-side current harmonics are reduced. The order of a current harmonic, that is to be dampened using a harmonics controller, is defined using p3624.		

r3626[0...1] Infeed harmonics control output / INF harm_ctrl outp

r3632 Infeed input voltage Vsd (active component) / INF V_inp Vsd

A_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 1774, 8946, 8950
	P-Group: Closed-loop control	Units group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the voltage Vsd (active component) at the 3-phase line supply input of the power unit.		

r3633 Infeed input voltage Vsq (reactive component) / INF V_inp Vsq

A_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 1774, 8946, 8950
	P-Group: Closed-loop control	Units group: 5_1	Unit selection: p0505
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [Vrms]	- [Vrms]	- [Vrms]
Description:	Displays the voltage Vsq (reactive component) at the 3-phase line supply input of the power unit.		

r3635 CO: Infeed input voltage angle / INF V_inp angle

A_INF	Can be changed: -	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 8950
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]
Description:	Displays the angle of the input voltage (relative to the line angle).		

p3660	VSM input line supply voltage, voltage scaler / VSM inp V_scaler		
A_INF, S_INF	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 100000.00 [%]	Access level: 3 Func. diagram: 9880 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets the voltage scaler for the Voltage Sensing Module (VSM).		
Note:	When the 690 V input is used (X522) without voltage scaler, 0 % should be entered. When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered. Example: 1000 V line supply voltage, voltage scaling, 10:1 --> voltage at the VSM input is 100 V --> p3660 = 10 * 100 % = 1000 %		
p3660[0...n]	VSM input line supply voltage, voltage scaler / VSM inp V_scaler		
VECTOR	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: p0150 Units group: - Scaling: PERCENT Max 100000.00 [%]	Access level: 3 Func. diagram: 9880 Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets the voltage scaler for the Voltage Sensing Module (VSM).		
Note:	When the 690 V input is used (X522) without voltage scaler, 0 % should be entered. When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered. Example: 1000 V line supply voltage, voltage scaling, 10:1 --> voltage at the VSM input is 100 V --> p3660 = 10 * 100 % = 1000 %		
r3661	CO: VSM input line supply voltage u1 - u2 / VSM inp u1-u2		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [V]	Calculated: - Dynamic index: - Units group: 5_3 Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 8850, 8950, 9880 Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Displays the voltage between phases L1 and L2.		
Dependency:	Refer to: r0025, r0072, p3660		
Note:	X521.1 or X522.1: Connection of L1 X521.2 or X522.2: Connection of L2 X521.3 or X522.3: Connection of L3 The absolute voltage value (3-ph. AC) resulting from the phase voltages is displayed unsmoothed in r0072[1] and smoothed in r0025[1].		

r3661[0...n]	CO: VSM input line supply voltage u1 - u2 / VSM inp u1-u2			
VECTOR	Can be changed: -	Calculated: -	Access level: 3

	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Modules (VSM).		
Dependency:	Refer to: p3670		
Note:	10 V input 2: Terminals X520.3 and X520.4		
p3676	VSM line filter capacitance alarm threshold / VSMfilt C A_thresh		
A_INF, S_INF	Can be changed: T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [%]	100.00 [%]	0.00 [%]
Description:	Sets the alarm threshold for the change of the capacitance of the line filter. The monitoring of the filter capacitance is deactivated with p3676 = 0.00 %.		
Dependency:	Refer to: p3670 Refer to: A06250		
Note:	Prerequisites for monitoring the filter capacitance: The phase currents must be measured at two capacitors of the line filter. To do this, CTs should be connected at the 10 V inputs of the VSM.		

r3677[0...2]	CO: VSM line filter capacitance / VSM filt C		
A_INF, S_INF	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [μF]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [μF]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [μF]
Description:	Displays the capacitance of the line filter (for a star circuit configuration).		
Index:	[0] = Phase U [1] = Phase V [2] = Phase W		
Dependency:	Refer to: p3676		
Note:	Prerequisite: The monitoring of the filter capacitance is activated.		
p3678[0...1]	Filter monitoring threshold values / Filt.monit.thresh.		
A_INF (Line transf)	Can be changed: C2(1) Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10000.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 0.00 [%] [1] 0.00 [%]
Description:	Sets the threshold values for filter monitoring. Voltage threshold value monitoring refers to p0210. Current threshold value monitoring refers to the nominal filter current. Nominal filter current = $2 * PI * p0211 * 3 * p0221[0] * p0210 * \sqrt{2} / \sqrt{3}$		
Index:	[0] = Voltage threshold value monitoring [1] = Current threshold value monitoring		
Dependency:	Refer to: r3671, r3672, r7310, r7311 Refer to: F06855		
Note:	A setting value of 0.0 deactivates filter monitoring. Recommended setting for activation: Voltage threshold value: 3.0% Current threshold value: 500%		
p3679[0...1]	Filter monitoring minimum times / Filt.monit.min.t		
A_INF (Line transf)	Can be changed: C2(1) Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 200.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 20.00 [ms] [1] 0.50 [ms]
Description:	Sets the minimum times for filter monitoring. If the set threshold values are exceeded for at least the set time, a fault is set.		
Index:	[0] = Voltage threshold value monitoring [1] = Current threshold value monitoring		

p3680	BI: Braking Module internal inhibit / BM int inhib		
B_INF	Can be changed: T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to inhibit the internal Braking Module. 1 signal: The Braking Module is inhibited. 0 signal: The Braking Module is enabled.		
Dependency:	Refer to: A06904		
Caution:	When the Braking Module is inhibited, no energy can be dissipated in the braking resistor.		
			
p3681	BI: Activating Braking Module internal DC link fast discharge / BM intDCdischg act		
B_INF	Can be changed: T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to activate the DC link fast discharge for an internal braking module. The DC link fast discharge is started later with delay time (p3682) when the following conditions apply: - BI: p3681 = 1 signal. - an external line contactor is opened via r0863.1 "energize contactor". The DC link fast discharge is interrupted when the following conditions apply: - BI: p3681 = 0 signal. - ON command for the infeed.		
Recommend.:	The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults could occur when pre-charging (e.g. F300027).		
Dependency:	Refer to: p3682 Refer to: F30027		
p3682	Braking Module internal DC link fast discharge delay time / BM int DC dischg t		
B_INF	Can be changed: C1(3), T Data type: Unsigned32 P-Group: Communications Not for motor type: - Min 500 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 4294967295 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1000 [ms]
Description:	Sets the delay time for switching in the DC link fast discharge for an internal Braking Module.		
Dependency:	Refer to: p3681		

p3683	Braking Module internal activation threshold brake chopper / BM int chop level		
B_INF	Can be changed: C2(1) Data type: FloatingPoint32 P-Group: Converter Not for motor type: - Min 110.00 [V]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 780.00 [V]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 760.00 [V]
Description:	Sets the activation threshold for the brake chopper.		
Note:	The activation threshold is only effective if the "Reduced device supply voltage" function (p212.0 = 1) has been activated!		
r3685	BO: Digital Braking Module: Pre-alarm I2t shutdown / Dig BM A I2t shutd		
B_INF	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	The binector output uses a 1 signal to indicate that 80 % of the highest permissible I2t value has been reached in the Braking Module.		
Dependency:	Refer to: A06905		
r3686	BO: Digital Braking Module Fault / Dig BM Fault		
B_INF	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	The binector output uses a 1 signal to indicate an overcurrent fault or an I2t shutdown in the Braking Module.		
Dependency:	Refer to: F06906		
r3687	BO: Digital Braking Module pre-alarm overtemperature / Dig BM A overtemp		
B_INF	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	The binector output uses a 1 signal to indicate an overtemperature condition at the connected temperature sensor of the braking resistor.		
r3688	BO: Digital Braking Module fault overtemperature / Dig BM F overtemp		
B_INF	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	The binector output uses a 1 signal to indicate that the highest permissible overtemperature at the connected temperature sensor has been reached and has caused a trip (shutdown).		
Dependency:	Refer to: F06908		

r3689 BO: Digital Braking Module Vce fault / Dig BM Uce fault

B_INF	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: The binector output uses a 1 signal to indicate that there is a Vce fault in the Digital Braking Module.

Dependency: Refer to: F06909

p3700 APC configuration / APC config

SERVO (APC)	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 7012
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: REL	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the configuration for APC (Advanced Positioning Control).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activating APC	Yes	No	-
	01	APC acceleration sensor	Yes	No	-
	08	Activating pulse de-coupling	Yes	No	-

Note: Re bit 00:

For a 1 signal, the acceleration filter output is added to the speed setpoint.

For a 0 signal, the value 0 is added. This must be used to evaluate the filter frequency characteristics.

Re bit 08:

For bit 0 = 1 and activated pulse de-coupling (bit 8 = 1), the speed of the direct measuring system (p3701) selected for APC is used as the actual value for the closed-loop speed control.

p3701 APC enc sel / APC enc sel

SERVO (APC)	Can be changed: C1(4)	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Data sets	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	2	3	2

Description: Sets the number of the encoder used for for APC (Advanced Positioning Control).

Value:
2: Encoder 2
3: Encoder 3

Note: Encoder 1 is the motor encoder and cannot be used for APC as APC requires a load measuring system.

An encoder used for APC is, regarding its fault messages, treated just like a motor encoder - this means that its fault messages are assigned to the drive.

SERVO (APC)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [rpm]	Calculated: CALC_MOD_CON Dynamic index: DDS, p0180 Units group: 3_1 Scaling: - Max 210000.00 [rpm]	Access level: 2 Func. diagram: 7012 Unit selection: p0505 Expert list: 1 Factory setting 210000.00 [rpm]
Description:	Sets the speed limit for APC (Advanced Positioning Control).		
Dependency:	Refer to: p3779		
p3779[0...n]	APC velocity limit monitoring time / APC v_limit t		
SERVO (APC, Lin)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed-loop control Not for motor type: REL Min 0 [ms]	Calculated: CALC_MOD_CON Dynamic index: DDS, p0180 Units group: - Scaling: - Max 1000000 [ms]	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the monitoring time to limit the output for APC (Advanced Positioning Control). This monitoring time is started after the selected limit value (p3778) has been exceeded. A corresponding fault is output if the limit value is not undershot before this time expires.		
Dependency:	Refer to: p3778 Refer to: F07425		

p3779[0...n]	APC speed limit monitoring time / APC n_limit t		
SERVO (APC)	Can be changed: U, T Data type: Unsigned32 P-Group: Closed-loop control Not for motor type: REL Min 0 [ms]	Calculated: CALC_MOD_CON Dynamic index: DDS, p0180 Units group: - Scaling: - Max 1000000 [ms]	Access level: 2 Func. diagram: 7012 Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the monitoring time to limit the output for APC (Advanced Positioning Control). This monitoring time is started after the selected limit value (p3778) has been exceeded. A corresponding fault is output if the limit value is not undershot before this time expires.		
Dependency:	Refer to: p3778 Refer to: F07425		
p3784[0...n]	BI: Sync-line-drive external increase voltage / Sync ext V incr		
VECTOR	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dynamic index: CDS, p0170 Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the signal source to increase the voltage for external line-drive synchronization. BI: p3784 = 1 signal: The voltage is increased.		
Note:	Only SINAMICS GM150.		
p3785[0...n]	BI: Sync-line-drive external decrease voltage / Sync ext V decr		
VECTOR	Can be changed: T Data type: Unsigned32 / Binary P-Group: Functions Not for motor type: - Min -	Calculated: - Dynamic index: CDS, p0170 Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the signal source to decrease the voltage for external line-drive synchronization. BI: p3785 = 1 signal: The voltage is lowered.		
Note:	Only SINAMICS GM150.		
p3800[0...n]	Sync-line-drive activation / Sync act		
VECTOR	Can be changed: T Data type: Integer16 P-Group: Functions Not for motor type: - Min 0	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 1	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the activation for the line-drive synchronization.		
Value:	0: Sync-line-drive deactivated 1: Sync-line-drive activated VSM-INT		
Dependency:	Refer to: p3801, p3802		

Note: When the ground fault monitoring initiates a fault for overlapping synchronizing the threshold value p0287[1] for the Motor Module and the associated infeed must be appropriately increased (e.g. p0287[1] = 100 %).
 For p3800 = 1, the following applies:
 The INTERNAL voltage actual values are used for synchronization. The effects that a (sine-wave) filter - that is connected between the Motor Module and motor - has on the voltage actual values are taken into account (theoretically) by appropriately selecting p0230.
 VSM: Voltage Sensing Module

p3801[0...n]	Sync-line-drive, drive object number / Sync DO_No				
VECTOR	Can be changed: T		Calculated: -	Access level: 2	
	Data type: Unsigned16		Dynamic index: DDS, p0180	Func. diagram: 7020	
	P-Group: Functions		Units group: -	Unit selection: -	
	Not for motor type: -		Scaling: -	Expert list: 1	
	Min		Max	Factory setting	
	1		62	1	
Description:	Sets the drive object number of the Voltage Sensing Module (VSM) used for the line-drive synchronization.				
Dependency:	Refer to: p3800, p3802				
Notice:	The current controller sampling time p0115[0] of the drive object with the VSM used for synchronization must be identical to the current controller sampling time of the drive of the drive used to perform line synchronization.				
Note:	VSM: Voltage Sensing Module The setting p3801 = 1 is always possible (no VSM selected).				

p3802[0...n]	BI: Sync-line-drive enable / Sync enable				
VECTOR	Can be changed: T		Calculated: -	Access level: 2	
	Data type: Unsigned32 / Binary		Dynamic index: CDS, p0170	Func. diagram: 7020	
	P-Group: Functions		Units group: -	Unit selection: -	
	Not for motor type: -		Scaling: -	Expert list: 1	
	Min		Max	Factory setting	
	-		-	0	
Description:	Sets the signal source to switch in/switch out for the line-drive synchronization. BI: p3802 = 1 signal: The line-drive synchronization is switched in.				
Dependency:	Refer to: p3800, p3801				

r3803.0	CO/BO: Sync-line-drive control word / Sync STW				
VECTOR	Can be changed: -		Calculated: -	Access level: 2	
	Data type: Unsigned32		Dynamic index: -	Func. diagram: -	
	P-Group: Functions		Units group: -	Unit selection: -	
	Not for motor type: -		Scaling: -	Expert list: 1	
	Min		Max	Factory setting	
	-		-	-	
Description:	Displays the control word for the line-drive synchronization.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Sync-line-drive selected	Yes	No	-
Note:	Re bit 00: For a 1 signal, p3800 > 0 is set.				

r3804	CO: Sync-line-drive target frequency / Sync f_target		
VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min - [Hz]	Calculated: - Dynamic index: - Units group: - Scaling: p2000 Max - [Hz]	Access level: 2 Func. diagram: 3030, 7020 Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the target frequency for the line-drive synchronization.		
Dependency:	Refer to: A07941		
r3805	CO: Sync-line-drive frequency difference / Sync f_diff		
VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min - [Hz]	Calculated: - Dynamic index: - Units group: - Scaling: p2000 Max - [Hz]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the frequency difference between the measured target frequency and output frequency of the gating unit of the closed-loop control for line-drive synchronization.		
p3806[0...n]	Sync-line-drive frequency difference threshold value / Sync f_diff thresh		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [Hz]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 1.00 [Hz]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting 0.10 [Hz]
Description:	Sets the threshold value of the frequency difference to activate the closed-loop phase control for line-drive synchronization. The closed-loop phase control is activated (r3819.6 = 1), if the frequency difference is less than the threshold value.		
r3808	CO: Sync-line-drive phase difference / Sync phase diff		
VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min - [°]	Calculated: - Dynamic index: - Units group: - Scaling: p2005 Max - [°]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting - [°]
Description:	Displays the phase difference between the measured target phase and phase of the gating unit of the closed-loop control for line-drive synchronization.		
p3809[0...n]	Sync-line-drive phase setpoint / Sync phase setp		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min -180.00 [°]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 179.90 [°]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting 0.00 [°]
Description:	Sets the phase setpoint for the line-drive synchronization.		

p3811[0...n]	Sync-line-drive frequency limiting / Sync f_lim		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [Hz]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 1.00 [Hz]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting 0.20 [Hz]
Description:	Sets the frequency limiting of the phase controller output for the line-drive synchronization.		
r3812	CO: Sync-line-drive correction frequency / Sync f_corr		
VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min - [Hz]	Calculated: - Dynamic index: - Units group: - Scaling: p2000 Max - [Hz]	Access level: 2 Func. diagram: 3080, 7020 Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the correction frequency for the line-drive synchronization.		
p3813[0...n]	Sync-line-drive phase synchronism threshold value / Sync Ph_sync thrsh		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 1.00 [°]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 20.00 [°]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting 2.00 [°]
Description:	Sets the threshold value of the phase synchronism for the line-drive synchronization. A prerequisite for synchronism is achieved if the phase difference is lower than the threshold value.		
Note:	Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.		
r3814	CO: Sync-line-drive voltage difference / Sync V_diff		
VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min - [Vrms]	Calculated: - Dynamic index: - Units group: - Scaling: p2001 Max - [Vrms]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the voltage difference between the measured target voltage and output voltage of the gating unit of the closed-loop control for line-drive synchronization.		
p3815[0...n]	Sync-line-drive voltage difference threshold value / Sync V_diff thresh		
VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Functions Not for motor type: - Min 0.00 [%]	Calculated: CALC_MOD_LIM_REF Dynamic index: DDS, p0180 Units group: - Scaling: - Max 20.00 [%]	Access level: 2 Func. diagram: 7020 Unit selection: - Expert list: 1 Factory setting 10.00 [%]
Description:	Sets the threshold value of the voltage difference for the line-drive synchronization. A prerequisite for synchronism is reached if the voltage difference is less than the threshold value.		

Note: Synchronism is reached ($r3819.2 = 1$), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.
For voltage manipulated quantity margin (reserve) of the drive converter, the amplitude difference (r3814) between the setpoint and actual value is controlled (corrected) to zero.

r3819.0...7 CO/BO: Sync-line-drive status word / Sync ZSW					
VECTOR	Can be changed: -		Calculated: -	Access level: 2	
	Data type: Unsigned32		Dynamic index: -	Func. diagram: 7020	
	P-Group: Functions		Units group: -	Unit selection: -	
	Not for motor type: -		Scaling: -	Expert list: 1	
	Min	Max	Factory setting		
	-	-	-		
Description:	Displays the status word for the line-drive synchronization.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Sync-line-drive enabled	Yes	No	-
	02	Sync-line-drive synchronism reached	Yes	No	-
	03	Sync-line-drive synchronizing error	Yes	No	-
	05	Sync-line-drive frequency measurement active	Yes	No	-
	06	Sync-line-drive phase control active	Yes	No	-
	07	Sync-line-drive without drive	Yes	No	-

p3820[0...n] Friction characteristic, value n0 / Friction n0			
SERVO, VECTOR (n/M)	Can be changed: T	Calculated: CALC_MOD_LIM_REF	Access level: 2
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: 7010

0

Description: Setting for the friction characteristic record.

After the next power-on command, the friction characteristic is automatically recorded.

Value:
0: Friction characteristic record deactivated
1: Friction char record activated for all directions
2: Friction char record activated for positive direction
3: Friction char record activated for negative direction**Dependency:** When selecting the friction characteristic measurement, the drive data set changeover is suppressed.

For linear drives (refer to r0108 bit 12) it is not permissible to carry out the friction characteristic measurement for mechanical systems that limit travel.

Danger:

For drives with a mechanical system that limit the distance moved, it must be ensured that during recording, the friction characteristic is not reached. If this is not the case, then it is not permissible that the measurement is carried out.

Notice:

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note:

When the friction characteristic record is active, it is not possible to save the parameters (p0971, p0977).

When the friction characteristic record is active (p3845 > 0), it is not possible to change p3820 ... p3829, p3830 ... p3839 and p3842.

When recording the friction characteristic, in addition to the friction, the motor losses are also determined (e.g. iron losses, eddy current losses and remagnetizing losses). A differentiation is not made between these individual loss components. We recommend that a motor temperature sensor is used because torque deviations can also be emulated/mapped on the characteristic due to the thermal influence.

p3846[0...n]	Friction characteristic record ramp-up/ramp-down time / Frict rec t_RFG		
SERVO, VECTOR (n/M)	Can be changed: T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 0.000 [s]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 999999.000 [s]	Access level: 2 Func. diagram: 7010 Unit selection: - Expert list: 1 Factory setting 10.000 [s]
Description:	Sets the ramp-up/ramp-down time of the ramp-up/ramp-down function generator to automatically record the friction characteristic. The drive is accelerated from standstill (setpoint = 0) up to the maximum speed/velocity (p1082) in this time.		
Dependency:	Refer to: p3845		
p3847[0...n]	Friction characteristic record warm-up time / Frict rec t_warm		
SERVO, VECTOR (n/M)	Can be changed: T Data type: FloatingPoint32 P-Group: Functions Not for motor type: REL Min 0.000 [s]	Calculated: - Dynamic index: DDS, p0180 Units group: - Scaling: - Max 3600.000 [s]	Access level: 2 Func. diagram: 7010 Unit selection: - Expert list: 1 Factory setting 0.000 [s]
Description:	Sets the warm-up time. For an automatic trace (record) to start, the highest selected speed (p3829) is approached and this time is held. After this, the measurement is started with the highest speed.		
Dependency:	Refer to: p3829, p3845		
p3860	Number of Braking Modules connected in parallel / BM qty par_cct		
A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)	Can be changed: C2(2) Data type: Unsigned8 P-Group: Converter Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 8	Access level: 3 Func. diagram: 9951 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of Braking Modules connected in parallel in a DC link.		
Note:	The parameter can only be written to if the infeed is in the commissioning mode (p0010 = 2).		
r3861.0...7	BO: Braking Module inhibit/acknowledgement / BM inhib/ackn		
A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)	Can be changed: - Data type: Unsigned32 P-Group: Commands Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 9951 Unit selection: - Expert list: 1 Factory setting -
Description:	Signal to energize terminal X21.1 "inhibit/acknowledgement" on the Braking Module. This binector output is used as signal source to interconnect to a digital output. For "booksize" formats the digital output must be connected to terminal X21.1 and for "chassis" formats the digital output must be connected to terminal X21.3 of the particular Braking Module.		

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Inhibit/acknowledge Braking Module 1	High	Low	-
	01	Inhibit/acknowledge Braking Module 2	High	Low	-
	02	Inhibit/acknowledge Braking Module 3	High	Low	-
	03	Inhibit/acknowledge Braking Module 4	High	Low	-
	04	Inhibit/acknowledge Braking Module 5	High	Low	-
	05	Inhibit/acknowledge Braking Module 6	High	Low	-
	06	Inhibit/acknowledge Braking Module 7	High	Low	-
	07	Inhibit/acknowledge Braking Module 8	High	Low	-

Warning:

Check that binector outputs BO: r3861.n are connected correctly and that the appropriate digital outputs are wired correctly.

If the interconnection/wiring is incorrect, the software could execute a different (incorrect) function via binector outputs BO: r3861.n if the Braking Module develops a fault.

p3862	Braking Module DC link fast discharge delay time / BM DC-dischg t_del		
A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)	Can be changed: C1(3), T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 9951
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	500 [ms]	4294967295 [ms]	1000 [ms]
Description:	Sets the delay time for switching in the DC link fast discharge.		
Dependency:	Refer to: p3863, r3864		
Note:	The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.		

p3863	BI: Activating Braking Module DC link fast discharge / BM DC-dischg act		
A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 9951
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Sets the signal source to activate the DC link fast discharge. The DC link fast discharge is started later with delay time (p3862) when the following conditions apply: - BI: p3863 = 1 signal. - an external line contactor is opened via r0863.1 "energize contactor". The DC link fast discharge is interrupted when the following conditions apply: - BI: p3863 = 0 signal. - ON command for the infeed.		
Recommend.:	The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults could occur when pre-charging (e.g. F30027).		
Dependency:	Refer to: r3864 Refer to: F30027		
Note:	The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.		

r3864.0...7 BO: Braking Module DC link fast discharge / BM DC link dischg

A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 9951
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Signal to control (energize) terminal X21.2 "DC link fast discharge" on the Braking Module.
This binector output is used as signal source to interconnect to a digital output. The digital output must be connected to terminal X21.2 of the particular Braking Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Fast discharge Braking Module 1	High	Low	-
	01	Fast discharge Braking Module 2	High	Low	-
	02	Fast discharge Braking Module 3	High	Low	-
	03	Fast discharge Braking Module 4	High	Low	-
	04	Fast discharge Braking Module 5	High	Low	-
	05	Fast discharge Braking Module 6	High	Low	-
	06	Fast discharge Braking Module 7	High	Low	-
	07	Fast discharge Braking Module 8	High	Low	-

Dependency: Refer to: p3863
Refer to: F30027

Warning:

It must be carefully ensured that the binector outputs BO: p3864.n are correctly interconnected and also that the appropriate digital outputs are correctly connected up.
If the interconnection/connection is incorrect, in the case of an active DC link fast discharge, the software could execute another function (incorrect function) via binector outputs BO: p3864.n or could also permanently control the DC link fast discharge even if the line contactor is closed.

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3865[0...7] BI: Braking Module pre-warning I*t shutdown / BM I*t shutdown

	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the signal "pre-alarm I*t shutdown (X21.3) of the Braking Module.
BI: p3865[0...7] = 0 signal --> no pre-alarm, I*t shutdown
BI: p3865[0...7] = 1 signal --> pre-alarm I*t shutdown (A06901)

Dependency: Refer to: A06901

Note: The pre-alarm I*t shutdown is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3866[0...7]		BI: Braking Module fault / BM fault		
A_INF (Brk Mod ext), B_INF (Brk Mod ext), S_INF (Brk Mod ext)	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 9951	
	P-Group: -	Units group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source for the "fault" signal of the Braking Module (X21.4 for "booksize" formats and X21.3 for "chassis" formats). BI: p3866[0...7] = 0 signal --> fault (A06900) BI: p3866[0...7] = 1 signal --> No fault For a 1 signal, an acknowledgement via BO: r3861 is automatically carried out at certain time intervals.			
Dependency:	Refer to: A06900			

p3870		Long stator configuration / Long stator config			
SERVO	Can be changed: U, T	Calculated: -	Access level: 3		
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -		
	P-Group: -	Units group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min	Max	Factory setting		
	-	-	0000 bin		
Description:	Sets the configuration when operating a long stator motor.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Activate long stator help functions	Active	Inactive	-
	01	Suppress Gx_ZSW.14	Active	Inactive	-
Dependency:	Refer to: p3871, p3872, p3873, p3874, r3875, p3876, p3878, p3879				
Notice:	The following restrictions apply to this function: - it is not permissible to change over the drive data set. - the encoder/drive may not be parked using a PROFIBUS telegram. - a maximum of 4 drives may be connected to the Control Unit. - it is not permissible to commute with the zero mark (p0404).				
Note:	Re bit 00: All of the help functions for long stator motors can be enabled/disabled using this bit. Re bit 01: When the bit is set, bit 14 (parking encoder active) is set to 0 in the encoder status word GX_ZSW independent of whether the encoder is parked or not.				

p3871		BI: Set long stator signal source commutation angle (p3872) / Set S_src com_ang		
SERVO	Can be changed: T	Calculated: -	Access level: 3	
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: -	
	P-Group: -	Units group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	-	-	0	
Description:	Sets the signal source to set the commutation angle available via connector input p3872.			
Dependency:	Refer to: p3870, p3872, p3873, p3874, r3875, p3876, p3878, p3879			
Danger:	Setting an incorrect commutation angle can result in instability in the closed-loop control and in turn injure personnel or cause damage to the machine!			
				
Note:	Setting takes place for a 0/1 signal edge.			

p3872			
SERVO	CI: Long stator signal source commutation angle / S_src com_angle		
	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dynamic index: -	Func. diagram: -

Description:	Sets the commutation angle 2 for long stator motors.		
Dependency:	Refer to: p3870, p3871, p3872, p3873, p3874, r3875, p3876, p3878		
p3900	Completion of quick commissioning / Compl_quick_comm		
A_INF, B_INF, S_INF	Can be changed: C2(1) Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Exits the quick commissioning (p0010 = 1) with automatic calculation of all of the parameters that depend on the entries made during the quick commissioning. p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 are re-established and all of the dependent filter and closed-loop control parameters are calculated (corresponding to p0340 = 1). p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 and the calculations corresponding to p0340 = 1. p3900 = 3 only includes the end of quick commissioning.		
Value:	0: No quick parameterization 1: Quick parameterization after parameter reset 2: Quick param. (only) for controller par. and reset for BICO par 3: Completion of quick commissioning		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	When the calculations have been completed, p3900 and p0010 are automatically reset to a value of 0.		

p3900 Completion of quick commissioning / Compl quick_comm			
SERVO	Can be changed: C2(1) Data type: Integer16 P-Group: Displays, signals Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Exits quick commissioning (p0010 = 1) with automatic calculation of all parameters of all existing drive data sets that depend on the entries made during quick commissioning. p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1). p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1. p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1.		
Value:	0: No quick parameterization 1: Quick parameterization after parameter reset 2: Quick parameterization (only) for BICO and motor parameters 3: Quick parameterization for motor parameters (only)		
Notice:	After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.		
Note:	When the calculations have been completed, p3900 and p0010 are automatically reset to a value of 0. When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens catalog motor are not overwritten. If a catalog motor has not been selected (see p0300), then the following parameters are reset with p3900 > 0 in order to restore the situation that applied when commissioning the drive for the first time: for induction motors p0320, p0352, p0353, p0604, p0605, p0626 ... p0628. for synchronous motors p0326, p0327, p0352, p0353, p0391 ... p0393, p0604, p0605.		

p3900 Completion of quick commissioning / Compl quick_comm			
VECTOR	Can be changed: C2(1) Data type: Integer16 P-Group: Displays, signals Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Exits quick commissioning (p0010 = 1) with automatic calculation of all parameters of all existing drive data sets that depend on the entries made during quick commissioning. p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1). p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1. p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1.		
Value:	0: No quick parameterization 1: Quick parameterization after parameter reset 2: Quick parameterization (only) for BICO and motor parameters 3: Quick parameterization for motor parameters (only)		

- Notice:** After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.
- Note:** When the calculations have been completed, p3900 and p0010 are automatically reset to a value of 0.
When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens catalog motor are not overwritten.
If a catalog motor has not been selected (see p0300), then the following parameters are reset with p3900 > 0 in order to restore the situation that applied when commissioning the drive for the first time:
for induction motors p0320, p0352, p0353, p0362 ... p0369, p0391 ... p0393, p0604, p0605, p0626 ... p0628.
for synchronous motors p0326, p0327, p0352, p0353, p0391 ... p0393, p0604, p0605.

p3901[0...n]		Power unit EEPROM Vdc offset calibration / PU EEPROM Vdc_offs			
B_INF, VECTOR	Can be changed:	C1, C2(1), T	Calculated: -	Access level: 3	
	Data type:	FloatingPoint32	Dynamic index:	PDS, p0120	Func. diagram: -
	P-Group:	-	Units group:	-	Unit selection: -
	Not for motor type:	-	Scaling:	-	Expert list: 1
	Min	-40.0 [V]	Max	40.0 [V]	Factory setting
Description:		Differential voltage for calibrating the offset for DC-link voltage measurement.			
Dependency:		Refer to: r0192, p0212			
Caution:		Incorrect use of the calibration can have a negative impact on the closed-loop control. The parameter influences the upper and lower voltage detection.			
					
Note:		Parameter entries are directly saved in the DRIVE-CLiQ component involved.			
		The parameter is only effective in the case of booksize power units if r0192 bit 22 and p0212 bit 0 are set.			

r3925[0...n]		Identification final display / Ident final_disp			
SERVO	Can be changed: -		Calculated: -		Access level: 3

	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the actual value at the digital inputs.
This means that the actual input signal can be checked at terminal DI x or DI/DO x prior to switching from the simulation mode (p4095.x = 1) to terminal mode (p4095.x = 0). The input signal at terminal DI x or DI/DO x is displayed in bit x of r4021.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X522.1)	High	Low	9660
	01	DI 1 (X522.2)	High	Low	9660
	02	DI 2 (X522.3)	High	Low	9660
	03	DI 3 (X522.4)	High	Low	9660
	08	DI/DO 0 (X521.1)	High	Low	9661
	09	DI/DO 1 (X521.2)	High	Low	9661
	10	DI/DO 2 (X521.3)	High	Low	9662
	11	DI/DO 3 (X521.4)	High	Low	9662

Note: If a DI/DO is parameterized as output (p4028.x = 1), then r4021.x = 0 is displayed.
DI: Digital input
DI/DO: Bidirectional digital input/output

Description: Sets the signal source for digital output DO 0 (X481.5) of the Terminal Board 30 (TB30).

Note: DO: Digital output

p4030	BI: TM15DI/DO signal source for terminal DI/DO 0 / TM15D S_src DI/DO0		
TM15DI_DO	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 9400 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for terminal DI/DO 0 (X520.2) of Terminal Module 15 (TM15).		
Note:	Prerequisite: The DI/DO must be set as an output (p4028.0 = 1). DI/DO: Bidirectional digital input/output		
p4030	BI: TM31 signal source for terminal DO 0 / TM31 S_src DO 0		
TM31	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: 1840, 9556 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the digital output DO 0 (X542.1, X542.2, X542.3) of Terminal Module 31 (TM31). Digital output 0 of TM31 is a relay output. If the signal at the binector input p4030 is low, then terminal COM 0 (X542.2) is connected to NC 0 (X542.1). This connection also matches the mechanical quiescent setting of the relay. If the signal at the binector input p4030 is high, then terminal COM 0 (X542.2) is connected to NO 0 (X542.3).		
Note:	DO: Digital output NC: Normally Closed contact NO: Normally Open contact

	Not for motor type: -	Scaling: -	Expert list: 1	
	Min	Max	Factory setting	
	0	1	0	
Description:	Sets the limit for the total output voltage of terminals X541.1, X541.2, X541.3 and X541.4 (DI/DO 8 ... 11) of Terminal Module 31 (TM31).			
Value:	0: 0.1 A total current limit DI/DO 8 ... 11 1: 1.0 A total current limit DI/DO 8 ... 11			
Dependency:	Refer to: p4028			
Warning:	Since the sum of the output currents at terminals X541.1, X541.2, X541.3 and X541.4 is limited, an overcurrent or short circuit at one output terminal can cause a dip in the signal at the other terminals.

Description:	Sets the type of analog inputs of Terminal Module 31 (TM31). p4056[x] = 0, 4 correspond to a voltage input (r4052, p4057, p4059 are displayed in V). p4056[x] = 2, 3, 5 correspond to a current input (r4052, p4057, p4059 are displayed in mA). In addition, the associated switch S5 must be switched. For a voltage input, S5.1 or S5.2 must be switched to setting "V". For a current input, S5.1 or S5.2 must be switched to setting "I" (load resistor = 250 ohm is switched in).		
Value:	0: Unipolar voltage input (0 V ... +10 V) 2: Unipolar current input (0 mA ... +20 mA) 3: Unipolar current input monitored (+4 mA ... +20 mA) 4: Bipolar voltage input (-10 V ... +10 V) 5: Bipolar current input (-20 mA ... +20 mA)		
Index:	[0] = AI 0 (X521.1/X521.2, S5.0) [1] = AI 1 (X521.3/X521.4, S5.1)		
Warning:	The maximum voltage difference between the analog input terminals AI+, AI- and the ground of the TM31 (X520.6, X530.3) may not exceed 35 V. For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 15 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.		
Notice:	For use as voltage input, switch S500 must be set to 0 for the input involved. Switch S500 is located on the front panel of the TM31 above terminal block X521.		
Note:	When changing p4056, the parameters of the scaling characteristic (p4057, p4058, p4059, p4060) are overwritten with the following default values: For p4056 = 0, 4, p4057 is set to 0.0 V, p4058 to 0.0 %, p4059 to 10.0 V and p4060 to 100.0 %. For p4056 = 2, 5, p4057 is set to 0.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %. For p4056 = 3, p4057 is set to 4.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

r4076[0...1] TB30 analog outputs, type / TB30 AO type

TB30	Can be changed: -	Calculated: -	Access level: 1
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 4	Max 4	Factory setting -
Description:	Displays the type of analog outputs of the Terminal Board 30 (TB30).		
Value:	4: Voltage output (-10 V ... +10 V)		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		

p4076[0...1] TM31 analog outputs, type / TM31 AO type

TM31	Can be changed: U, T	Calculated: -	Access level: 1
	Data type: Integer16	Dynamic index: -	Func. diagram: 9572
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 4	Factory setting 4
Description:	Sets the type of analog outputs of Terminal Module 31 (TM31). p4076[x] = 1, 4 correspond to a voltage output (p4074, p4078, p4080, p4083 are displayed in V). p4076[x] = 0, 2, 3 correspond to a current output (p4074, p4078, p4080, p4083 are displayed in mA).		
Value:	0: Current output (0 mA ... +20 mA) 1: Voltage output (0 V ... +10 V) 2: Current output (+4 mA ... +20 mA) 3: Current output (-20 mA ... +20 mA) 4: Voltage output (-10 V ... +10 V)		

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: Refer to: p4077, p4078, p4079, p4080

Note: When changing p4076, the parameters of the scaling characteristic (p4077, p4078, p4079, p4080) are overwritten with the following default values:

For p4076 = 0, 3, p4077 is set to 0.0 %, p4078 to 0.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

For p4076 = 1, 4, p4077 is set to 0.0 %, p4078 to 0.0 V, p4079 to 100.0 % and p4080 to 10.0 V.

For p4076 = 2, p4077 is set to 0.0 %, p4078 to 4.0 mA, p4079 to 100.0 % and p4080 to 20.0 mA.

p4077[0...1] TB30 analog outputs, characteristic value x1 / TB30 AO char x1

TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 9106
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	0.00 [%]

Description: Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30).

The scaling characteristic for the analog outputs is defined using 2 points.

This parameter specifies the x coordinate (percentage) of the 1st value pair of the characteristic.

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

Note: The parameters for the characteristic do not have a limiting effect.

p4077[0...1] TM31 analog outputs, characteristic value x1 / TM31 AO char x1

TM31	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 9572
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-1000.00 [%]	1000.00 [%]	0.00 [%]

Description: Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31).

The scaling characteristic for the analog outputs is defined using 2 points.

This parameter specifies the x coordinate (percentage) of the 1st value pair of the characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The unit of this parameter (V or mA) depends on the analog input type.

Refer to: r4076, p4076

Notice: This parameter is automatically overwritten when the analog output type is changed (p4076).

Note: This parameter is automatically overwritten if p4076 (type of analog output) is changed.

The parameters for the characteristic do not have a limiting effect.

p4078[0...1] TB30 analog outputs, characteristic value y1 / TB30 AO char y1

TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 9106
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-11.000 [V]	11.000 [V]	0.000 [V]

Description: Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30).

The scaling characteristic for the analog outputs is defined using 2 points.

This parameter specifies the y coordinate (output voltage in V) of the 1st value pair of the characteristic.

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

Note: The parameters for the characteristic do not have a limiting effect.

p4078[0...1] TM31 analog outputs, characteristic value y1 / TM31 AO char y1			
TM31	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -20.000 [V]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 20.000 [V]	Access level: 2 Func. diagram: 9572 Unit selection: - Expert list: 1 Factory setting 0.000 [V]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Module 31 (TM31). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the y coordinate (output voltage in V or output current in mA) of the 1st value pair of the characteristic.		
Index:	[0] = AO 0 (X522.1, X522.2, X522.3) [1] = AO 1 (X522.4, X522.5, X522.6)		
Dependency:	The unit of this parameter (V or mA) depends on the analog input type. Refer to: r4076, p4076		
Notice:	This parameter is automatically overwritten when the analog output type is changed (p4076).		
Note:	This parameter is automatically overwritten if p4076 (type of analog output) is changed. The parameters for the characteristic do not have a limiting effect.		

p4079[0...1] TB30 analog outputs, characteristic value x2 / TB30 AO char x2			
TB30	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -1000.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [%]	Access level: 2 Func. diagram: 9106 Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30). The scaling characteristic for the analog outputs is defined using 2 points. This parameter specifies the x coordinate (percentage) of the 2nd value pair of the characteristic.		
Index:	[0] = AO 0 (X482.5/X482.6) [1] = AO 1 (X482.7/X482.8)		
Note:	The parameters for the characteristic do not have a limiting effect.

Description: Sets the signal source for terminal DI/DO 23 (X522.9) of Terminal Module 15 (TM15).

Note: Prerequisite: The DI/DO must be set as an output (p4028.23 = 1).
DI/DO: Bidirectional digital input/output

r4094.0...23	BO: TM15 digital inputs status inverted raw data internal / TM15 DI st raw dat		
TM15DI_DO	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the inverted status of the raw data of the digital inputs of the Terminal Module 15 (TM15).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI/DO 0 (X520.2)	High	Low	-
	01	DI/DO 1 (X520.3)	High	Low	-
	02	DI/DO 2 (X520.4)	High	Low	-
	03	DI/DO 3 (X520.5)	High	Low	-
	04	DI/DO 4 (X520.6)	High	Low	-
	05	DI/DO 5 (X520.7)	High	Low	-
	06	DI/DO 6 (X520.8)	High	Low	-
	07	DI/DO 7 (X520.9)	High	Low	-
	08	DI/DO 8 (X521.2)	High	Low	-
	09	DI/DO 9 (X521.3)	High	Low	-
	10	DI/DO 10 (X521.4)	High	Low	-

11	DI/DO 11 (X521.5)	High	Low	-
12	DI/DO 12 (X521.6)	High	Low	-
13	DI/DO 13 (X521.7)	High	Low	-
14	DI/DO 14 (X521.8)	High	Low	-
15	DI/DO 15 (X521.9)	High	Low	-
16	DI/DO 16 (X522.2)	High	Low	-
17	DI/DO 17 (X522.3)	High	Low	-
18	DI/DO 18 (X522.4)	High	Low	-
19	DI/DO 19 (X522.5)	High	Low	-
20	DI/DO 20 (X522.6)	High	Low	-
21	DI/DO 21 (X522.7)	High	Low	-
22	DI/DO 22 (X522.8)	High	Low	-
23	DI/DO 23 (X522.9)	High	Low	-

Notice: The raw data of the digital inputs is directly displayed (e.g. without any debounce).

Note: Should only used for internal Siemens purposes (alternative r4022, r4023).

p4095 TB30 digital inputs, simulation mode / TB30 DI sim_mode

TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 1790, 9100
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the simulation mode for the digital inputs of the Terminal Board 30 (TB30).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X481.1)	Simulation	Terminal eval.	-
	01	DI 1 (X481.2)	Simulation	Terminal eval.	-
	02	DI 2 (X481.3)	Simulation	Terminal eval.	-
	03	DI 3 (X481.4)	Simulation	Terminal eval.	-

Dependency: The setpoint for the input signals is specified using p4096.

Refer to: p4096

Note: This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital input

p4095 TM15DI/DO digital inputs, simulation mode / TM15D DI sim_mode

TM15DI_DO	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 9400, 9401, 9402
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the simulation mode for the digital inputs of Terminal Module 15 (TM15).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI/DO 0 (X520.2)	Simulation	Terminal eval.	-
	01	DI/DO 1 (X520.3)	Simulation	Terminal eval.	-
	02	DI/DO 2 (X520.4)	Simulation	Terminal eval.	-
	03	DI/DO 3 (X520.5)	Simulation	Terminal eval.	-
	04	DI/DO 4 (X520.6)	Simulation	Terminal eval.	-
	05	DI/DO 5 (X520.7)	Simulation	Terminal eval.	-
	06	DI/DO 6 (X520.8)	Simulation	Terminal eval.	-
	07	DI/DO 7 (X520.9)	Simulation	Terminal eval.	-
	08	DI/DO 8 (X521.2)	Simulation	Terminal eval.	-
	09	DI/DO 9 (X521.3)	Simulation	Terminal eval.	-
	10	DI/DO 10 (X521.4)	Simulation	Terminal eval.	-
	11	DI/DO 11 (X521.5)	Simulation	Terminal eval.	-
	12	DI/DO 12 (X521.6)	Simulation	Terminal eval.	-

13	DI/DO 13 (X521.7)	Simulation	Terminal eval.	-
14	DI/DO 14 (X521.8)	Simulation	Terminal eval.	-
15	DI/DO 15 (X521.9)	Simulation	Terminal eval.	-
16	DI/DO 16 (X522.2)	Simulation	Terminal eval.	-
17	DI/DO 17 (X522.3)	Simulation	Terminal eval.	-
18	DI/DO 18 (X522.4)	Simulation	Terminal eval.	-
19	DI/DO 19 (X522.5)	Simulation	Terminal eval.	-
20	DI/DO 20 (X522.6)	Simulation	Terminal eval.	-
21	DI/DO 21 (X522.7)	Simulation	Terminal eval.	-
22	DI/DO 22 (X522.8)	Simulation	Terminal eval.	-
23	DI/DO 23 (X522.9)	Simulation	Terminal eval.	-

Dependency: The setpoint for the input signals is specified using p4096.

Refer to: p4096

Warning:

A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while the Terminal Module is being activated or deactivated.

Note:

This parameter is not saved when data is backed-up (p0971, p0977).

DI/DO: Bidirectional digital input/output

p4095 TM31 digital inputs, simulation mode / TM31 DI sim_mode

TM31	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 1840, 9550, 9552, 9560, 9562
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the simulation mode for the digital inputs of Terminal Module 31 (TM31).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X520.1)	Simulation	Terminal eval.	-
	01	DI 1 (X520.2)	Simulation	Terminal eval.	-
	02	DI 2 (X520.3)	Simulation	Terminal eval.	-
	03	DI 3 (X520.4)	Simulation	Terminal eval.	-
	04	DI 4 (X530.1)	Simulation	Terminal eval.	-
	05	DI 5 (X530.2)	Simulation	Terminal eval.	-
	06	DI 6 (X530.3)	Simulation	Terminal eval.	-
	07	DI 7 (X530.4)	Simulation	Terminal eval.	-
	08	DI/DO 8 (X541.2)	Simulation	Terminal eval.	-
	09	DI/DO 9 (X541.3)	Simulation	Terminal eval.	-
	10	DI/DO 10 (X541.4)	Simulation	Terminal eval.	-
	11	DI/DO 11 (X541.5)	Simulation	Terminal eval.	-

Dependency: The setpoint for the input signals is specified using p4096.

Refer to: p4096

Warning:

A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while the Terminal Module is being activated or deactivated.

Note:

This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital input

DI/DO: Bidirectional digital input/output

p4095 TM41 digital inputs, simulation mode / TM41 DI sim_mode

TM41	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the simulation mode for the digital inputs of Terminal Module 41 (TM41).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X522.1)	Simulation	Terminal eval.	9660
	01	DI 1 (X522.2)	Simulation	Terminal eval.	9660
	02	DI 2 (X522.3)	Simulation	Terminal eval.	9660
	03	DI 3 (X522.4)	Simulation	Terminal eval.	9660
	08	DI/DO 0 (X521.1)	Simulation	Terminal eval.	9661
	09	DI/DO 1 (X521.2)	Simulation	Terminal eval.	9661
	10	DI/DO 2 (X521.3)	Simulation	Terminal eval.	9662
	11	DI/DO 3 (X521.4)	Simulation	Terminal eval.	9662

Dependency: The setpoint for the input signals is specified using p4096.
Refer to: p4096

Warning: A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while the Terminal Module is being activated or deactivated.

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital input
DI/DO: Bidirectional digital input/output

p4096 TB30 digital inputs, simulation mode setpoint / TB30 DI sim setpt

TB30	Can be changed: U, T	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 1790, 9100
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the setpoint for the input signals in the simulation mode of the digital inputs of the Terminal Board 30 (TB30).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	DI 0 (X481.1)	High	Low	-
	01	DI 1 (X481.2)	High	Low	-
	02	DI 2 (X481.3)	High	Low	-
	03	DI 3 (X481.4)	High	Low	-

Dependency: The simulation of a digital input is selected using p4095.
Refer to: p4095

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital input

Description:	Sets the setpoint for the input voltage in the simulation mode of the analog inputs of Terminal Board 30 (TB30).		
Index:	[0] = AI 0 (X482.1/X482.2) [1] = AI 1 (X482.3/X482.4)		
Dependency:	The simulation of an analog input is selected using p4097. Refer to: p4097		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		

p4098[0...1] TM31 analog inputs simulation mode setpoint / TM31 AI sim setp			
TM31	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -20.000	Calculated: - Dynamic index: - Units group: - Scaling: - Max 20.000	Access level: 2 Func. diagram: 9566, 9568 Unit selection: - Expert list: 1 Factory setting 0.000
Description:	Sets the setpoint for the input value in simulation mode of the analog inputs of Terminal Module 31 (TM31).		
Index:	[0] = AI 0 (X521.1/X521.2, S5.0) [1] = AI 1 (X521.3/X521.4, S5.1)		
Dependency:	The simulation of an analog input is selected using p4097. If AI x is parameterized as voltage input (p4056), then the setpoint is a voltage in V. If AI x is parameterized as current input (p4056), then the setpoint is a current in mA. Refer to: r4056, p4056, p4097		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		
p4098[0] TM41 analog input, simulation mode setpoint / TM41 AI sim setp			
TM41	Can be changed: U, T Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min -20.000 [V]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 20.000 [V]	Access level: 2 Func. diagram: 9663 Unit selection: - Expert list: 1 Factory setting 0.000 [V]
Description:	Sets the setpoint for the input value in simulation mode of the analog input of Terminal Module 41 (TM41).		
Index:	[0] = AI 0 (X523.1/X523.2)		
Dependency:	The simulation of the analog input is selected using p4097. If AI x is parameterized as voltage input (p4056), then the setpoint is a voltage in V. If AI x is parameterized as current input (p4056), then the setpoint is a current in mA. Refer to: p4097		
Note:	This parameter is not saved when data is backed-up (p0971, p0977). AI: Analog Input		
p4099[0...2] TB30 inputs/outputs, sampling time / TB30 I/O t_sample			
TB30	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 1790, 9100 Unit selection: - Expert list: 1 Factory setting [0] 4000.00 [µs] [1] 4000.00 [µs] [2] 4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of the Terminal Board 30 (TB30).		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Analog outputs (AO)		
Dependency:	The parameter can only be modified for p0009 = 3, 29. The sampling times can only be set as an integer multiple of the basic sampling time (r0110, r0111). Refer to: p0009, r0110, r0111		

Note: The modified sampling time is not effective until the drive unit is powered up again.
For clock cycle synchronous PROFIBUS operation, the TB30 hardware (e.g. A/D converter) is operated with the PROFIBUS clock cycle (r2064[1]). This clock cycle is also kept after the PROFIBUS connection has been exited up to the next time that the Control Unit is powered down. In this case, a faster sampling time than the PROFIBUS clock cycle is not practical in p4099[0...2].

p4099			
TM15 inputs/outputs, sampling time / TM15 I/O t_sample			
TM15	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 31.25 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 500.00 [µs]	Access level: 3 Func. diagram: 1780 Unit selection: - Expert list: 1 Factory setting 125.00 [µs]
Description:	The sampling time of the Terminal Module 15 (TM15) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached. An entry is not possible using p4099. At power on, p4099 is correctly set to the resulting sampling time.		
p4099			
TM15DI/DO inputs/outputs, sampling time / TM15D I/O t_sampl			
TM15DI_DO	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 1781, 9400 Unit selection: - Expert list: 1 Factory setting 4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of Terminal Module 15 (TM15).		
Dependency:	The parameter can only be modified for p0009 = 3, 29. Refer to: p0009, r0110, r0111		
Note:	- the modified sampling time is not effective until the drive unit is powered up again. - parameter p4099[0] must never equal zero.		
p4099			
TM17 inputs/outputs, sampling time / TM17 I/O t_sample			
TM17	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 31.25 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 500.00 [µs]	Access level: 3 Func. diagram: 1782 Unit selection: - Expert list: 1 Factory setting 125.00 [µs]
Description:	The sampling time of the Terminal Module 17 (TM17) is determined by the DRIVE-CLiQ clock cycle of the line to which the component is attached. An entry is not possible using p4099. At power on, p4099 is correctly set to the resulting sampling time.		
p4099[0...2]			
TM31 inputs/outputs, sampling time / TM31 I/O t_sample			
TM31	Can be changed: C1(3) Data type: FloatingPoint32 P-Group: Commands Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 5000.00 [µs]	Access level: 3 Func. diagram: 1840, 9550 Unit selection: - Expert list: 1 Factory setting 4000.00 [µs]
Description:	Sets the sampling time for the inputs and outputs of Terminal Module 31 (TM31).		
Index:	[0] = Digital inputs/outputs (DI/DO) [1] = Analog inputs (AI) [2] = Analog outputs (AO)		

- Dependency:** The parameter can only be modified for p0009 = 3, 29.
The sampling times can only be set as an integer multiple of the basic sampling time (r0110, r0111).
Refer to: p0009, r0110, r0111
- Notice:** The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).
- Note:** - the modified sampling time is not effective until the drive unit is powered up again.
- parameter p4099[0] must never equal zero.

p4099[0...3] TM41 inputs/outputs, sampling time / TM41 I/O t_sample

TM41	Can be changed: C1(3)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 1842, 9660
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [µs]	5000.00 [µs]	[0] 4000.00 [µs]
			[1] 4000.00 [µs]
			[2] 0.00 [µs]
			[3] 125.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 41 (TM41).

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Not present
[3] = Incremental encoder emulation

Dependency: The parameter can only be modified for p0009 = 3, 29.
Refer to: p0009, r0110, r0111
Refer to: F35228

Note: - the value of the sampling time of the incremental encoder emulation p4099[3] can be preset in both operating modes (p4400). The next time that the system boots, the validity of the value is checked. For an invalid value, fault F35228 is output and p4099[3] is automatically set to the correct value. The modified parameter must then be saved and POWER ON carried out. If necessary, the sampling time can be checked again, taking into account any other TM41s located on the same DRIVE-CLiQ line.
- the modified sampling time is not effective until the drive unit is powered up again.
- if there are several TM41s located on a DRIVE-CLiQ line, the same sampling time in p4099[3] must be set for all components.
- the sampling time of a TM41 in SINAMICS mode (p4400 = 1) must be the same as that of the emulated encoder.
- the sampling time of a TM41 in SIMOTION mode (p4400 = 0) is determined by the topology used
- parameter p4099[0] must never equal zero.

p4100[0...3] TM120 temperature evaluation, sensor type / TM120 sensor type

TM120	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dynamic index: -	Func. diagram: 9606
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4	1

Description: Sets the temperature evaluation of Terminal Module 120 (TM120).

This means that the temperature sensor type is selected and the evaluation is switched in.

Value: 0: Evaluation disabled
1: PTC thermistor
2: KTY84
4: Bimetallic NC contact

Index: [0] = Temperature sensor channel 1
[1] = Temperature sensor channel 2
[2] = Temperature sensor channel 3
[3] = Temperature sensor channel 4

Note: The temperature sensor is connected to the following terminals:

Channel 1: X521.2(+) and X521.1(-)

Channel 2: X521.4(+) and X521.3(-)

Channel 3: X521.6(+) and X521.5(-)

Channel 4: X521.8(+) and X521.7(-)

p4100 TM31 temperature evaluation, sensor type / TM31 temp sens_typ			
TM31	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dynamic index: -	Func. diagram: 9576, 9577

	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min - [Ohm]	Max - [Ohm]	Factory setting - [Ohm]
Description:	Displays the actual resistance value of the temperature sensor connected at Terminal Module 120 (TM120).		
Index:	[0] = Temperature sensor channel 1 [1] = Temperature sensor channel 2 [2] = Temperature sensor channel 3 [3] = Temperature sensor channel 4		
Note:	The maximum measurable resistance value is approx. 1700 Ohm. The temperature sensor is connected to the following terminals: Channel 1: X521.2(+) and X521.1(-) . Channel 2: X521.4(+) and X521.3(-) . Channel 3: X521.6(+) and X521.5(-) . Channel 4: X521.8(+) and X521.7(-) .		

r4101 TM31 temperature evaluation, sensor resistance / TM31 temp R_sensor			
TM31	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 9576, 9577
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: PERCENT	Expert list: 1
	Min - [Ohm]	Max - [Ohm]	Factory setting - [Ohm]
Description:	Displays the actual resistance value of the temperature sensor connected at Terminal Module 31 (TM31).		
Note:	The maximum measurable resistance value is approx. 1700 Ohm. The temperature sensor is connected at terminals X522.7(+) and X522.8(-).		

p4102[0...7]		TM120 temperature evaluation fault/alarm threshold / TM120 TempThresh	
TM120	Can be changed: T Data type: Integer16 P-Group: - Not for motor type: - Min -48 [°C]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 251 [°C]	Access level: 1 Func. diagram: 9576 Unit selection: - Expert list: 1 Factory setting 251 [°C]
Description:	Sets the fault/alarm threshold for the temperature evaluation of Terminal Module 120 (TM120). Temperature actual value 1 > p4102[0] --> alarm A35211 is output. Temperature actual value 1 > p4102[1] --> fault F35207 is output. Temperature actual value 2 > p4102[2] --> alarm A35212 is output. Temperature actual value 2 > p4102[3] --> fault F35208 is output. Temperature actual value 3 > p4102[4] --> alarm A35213 is output. Temperature actual value 3 > p4102[5] --> fault F35209 is output. Temperature actual value 4 > p4102[6] --> alarm A35214 is output. Temperature actual value 4 > p4102[7] --> fault F35210 is output.		
Index:	[0] = Sensor 1 alarm threshold [1] = Sensor 1 fault threshold [2] = Sensor 2 alarm threshold [3] = Sensor 2 fault threshold [4] = Sensor 3 alarm threshold [5] = Sensor 3 fault threshold [6] = Sensor 4 alarm threshold [7] = Sensor 4 fault threshold		
Dependency:	Refer to: p4103		
Warning:	Fault F35207-F352010 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.		
			
Note:	A value > 250 °C deactivates the alarm or fault. The temperature sensor is connected to the following terminals: Channel 1: X521.2(+) and X521.1(-) . Channel 2: X521.4(+) and X521.3(-) . Channel 3: X521.6(+) and X521.5(-) . Channel 4: X521.8(+) and X521.7(-) .		

p4102[0...1]		TM31 temperature evaluation fault/alarm threshold / TM31 temp thresh	
TM31	Can be changed: T Data type: Integer16 P-Group: - Not for motor type: - Min -48 [°C]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 251 [°C]	Access level: 1 Func. diagram: 9576 Unit selection: - Expert list: 1 Factory setting [0] 100 [°C] [1] 120 [°C]
Description:	Sets the fault/alarm threshold for the temperature evaluation of Terminal Module 31 (TM31). Temperature actual value > p4102[0] --> alarm A35211 is output. Alarm A35211 remains present until the temperature actual value (r4105) falls below the corresponding value (p4102[0] hysteresis). Temperature actual value > p4102[1] --> fault F35207 is output. Fault F35207 remains present until the temperature actual value (r4105) falls below the corresponding value (p4102[1] hysteresis) and the fault has been acknowledged. The hysteresis value is 5 °C and cannot be changed by the user.		
Index:	[0] = Alarm threshold [1] = Fault threshold		

Dependency: Refer to: r4104

Warning: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

Note: A value > 250 °C deactivates the alarm or fault.
The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

p4103[0...3] TM120 temperature evaluation timer / TM120 temp t_timer

TM120	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 600.000 [ms]	Access level: 1 Func. diagram: 9576 Unit selection: - Expert list: 1 Factory setting 0.000 [ms]
-------	---	---	---

Description: Timer for the fault output of the temperature evaluation of Terminal Module 120 (TM120).
This timer is started when the temperature alarm threshold (p4102[0,2,4,6]) is exceeded.
If the timer expires before the temperature in the meantime falls below the alarm threshold, the fault F35207-F35210 is output.
If the temperature fault threshold (p4102[1,3,5,7]) is prematurely exceeded before the timer has expired, then fault F35207-F35210 is immediately output.
As long as the temperature of the TM120 has still not exceeded the fault threshold and the alarm threshold has again been undershot, the fault can be acknowledged.

Index:
 [0] = Temperature sensor channel 1
 [1] = Temperature sensor channel 2
 [2] = Temperature sensor channel 3
 [3] = Temperature sensor channel 4

Dependency: Refer to: r4104

Warning: Fault F35207-F35210 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.

Note: With p4103 = 0 ms, the timer is deactivated and only the fault threshold is effective.

p4103 TM31 temperature evaluation timer / TM31 temp t_timer

TM31	Can be changed: U, T Data type: FloatingPoint32 P-Group: Motor Not for motor type: - Min 0.000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 600.000 [ms]	Access level: 1 Func. diagram: 9576 Unit selection: - Expert list: 1 Factory setting 0.000 [ms]
------	---	---	---

Description: Timer for the fault output of the temperature evaluation of Terminal Module 31 (TM31).
This timer is started when the temperature alarm threshold (p4102[0]) is exceeded.
If the timer expires before the temperature in the meantime falls below the alarm threshold, the fault F35207 is output.
If the temperature fault threshold (p4102[1]) is prematurely exceeded before the timer has expired, then fault F35207 is immediately output.
As long as the temperature of the TM31 has still not exceeded the fault threshold and the alarm threshold has again been undershot, the fault can be acknowledged.

Dependency: Refer to: r4104

Warning: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

Note: With p4103 = 0 ms, the timer is deactivated and only the fault threshold is effective.

r4104.0...7 BO: TM120 temperature evaluation, status / TM120 temp status

TM120	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 1840, 9576
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status for the temperature evaluation of Terminal Module 120 (TM120).
This displays whether the temperature actual value has exceeded the fault/alarm threshold.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Temperature alarm threshold sensor 1 exceeded	Yes	No	-
	01	Temperature fault threshold sensor 1 exceeded	Yes	No	-
	02	Temperature alarm threshold sensor 2 exceeded	Yes	No	-
	03	Temperature fault threshold sensor 2 exceeded	Yes	No	-
	04	Temperature alarm threshold sensor 3 exceeded	Yes	No	-
	05	Temperature fault threshold sensor 3 exceeded	Yes	No	-
	06	Temperature alarm threshold sensor 4 exceeded	Yes	No	-
	07	Temperature fault threshold sensor 4 exceeded	Yes	No	-

Dependency: Refer to: p4102

r4104.0...1 BO: TM31 temperature evaluation, status / TM31 temp status

TM31	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 1840, 9576
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status for the temperature evaluation of Terminal Module 31 (TM31).
This displays whether the temperature actual value has exceeded the fault/alarm threshold.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Temperature alarm threshold exceeded	Yes	No	-
	01	Temperature fault threshold exceeded	Yes	No	-

Dependency: Refer to: p4102

r4105[0...3] CO: TM120 temperature evaluation, actual value / TM120 temp act val

TM120	Can be changed: -	Calculated: -	Access level: 1
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 1840, 9576
	P-Group: Terminals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: TEMP	Expert list: 1
	Min	Max	Factory setting
	- [°C]	- [°C]	- [°C]

Description: Displays the actual temperature value of the temperature evaluation of Terminal Module 120 (TM120).

Index:
[0] = Temperature sensor channel 1
[1] = Temperature sensor channel 2
[2] = Temperature sensor channel 3
[3] = Temperature sensor channel 4

Dependency:	For sensor type PTC (p4100 = 1) and bimetal (p4100 = 4), the following applies: - below the nominal response temperature, r4105 = -50 °C. - above the nominal response temperature, r4105 = 250 °C. For sensor type KTY84-130 (p4100 = 2), the following applies: - the displayed value corresponds to the temperature actual value. Refer to: p4100
Note:	For an invalid temperature actual value, (e.g. a short-circuit at the sensor input), r4105 = -300 °C is displayed. The temperature sensor is connected to the following terminals: Channel 1: X521.2(+) and X521.1(-) . Channel 2: X521.4(+) and X521.3(-) . Channel 3: X521.6(+) and X521.5(-) . Channel 4: X521.8(+) and X521.7(-) .

r4105	CO: TM31 temperature evaluation, actual value / TM31 temp actValue		
TM31	Can be changed: - Data type: FloatingPoint32 P-Group: Terminals Not for motor type: - Min - [°C]	Calculated: - Dynamic index: - Units group: - Scaling: TEMP Max - [°C]	Access level: 1 Func. diagram: 1840, 9576 Unit selection: - Expert list: 1 Factory setting - [°C]
Description:	Displays the actual temperature value of the temperature evaluation of Terminal Module 31 (TM31).		
Dependency:	For sensor type PTC (p4100 = 1), the following applies: - below the nominal response temperature, r4105 = -50 °C. - above the nominal response temperature, r4105 = 250 °C. For sensor type KTY84-130 (p4100 = 2), the following applies: - the displayed value corresponds to the temperature actual value. Refer to: p4100		
Note:	For an invalid temperature actual value, (e.g. a short-circuit at the sensor input), r4105 = -300 °C is displayed. The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

	-	-	-

Description: Displays the edge mode for digital input 0 ... 7 of Terminal Module 15 (TM15).
Assignment of the digital inputs to the bits:

DI 0: r4211.1 ... 0

DI 1: r4211.3 ... 2

DI 2: r4211.5 ... 4

DI 3: r4211.7 ... 6

DI 4: r4211.9 ... 8

DI 5: r4211.11 ... 10

DI 6: r4211.13 ... 12

DI 7: r4211.15 ... 14

Possible edge modes:

Bit x, y = 0, 0 --> no edge detection

Bit x, y = 0, 1 --> rising - rising edge

Bit x, y = 1, 0 --> falling - falling edge

Bit x, y = 1, 1 --> rising - falling edge or falling - rising edge

Note: DI: Digital input

Description: Is used to synchronize the timer of Terminal Module 15 (TM15) with the system time of the DP master.
 Bit 12 ... 15:
 After synchronization with the DP master, the module sends its sign-of-life in the form of a counter.
 Bit 0:
 This SYNC signal is set if the module has aligned its time to the system time of the DP master.
 Bit 9:
 This bit is set if a fault has occurred on the module (r0945).

Description: Displays the time when detecting the 1st and 2nd edge for digital input 23 of Terminal Module 15 (TM15).
The two times are specified as 8 bit values with a resolution of 64 µs.

Note: DI: Digital input

p4400 TM41 incremental encoder emulation operating mode / Enc_emulat mode

TM41	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: 9674, 9676
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0

Description: Sets the operating mode for the incremental encoder emulation.

Value:
0: SIMOTION
1: SINAMICS

Note: A change only becomes effective after the next boot.
Re value = 0:
Incremental encoder emulation using speed setpoint (p1155).
Re value = 1:
Incremental encoder emulation using encoder position actual value (p4420).

p4401 TM41 incremental encoder emulation mode / Enc_emulat mode

TM41	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 9674, 9676
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0011 bin

Description: Sets the mode for the incremental encoder emulation.
This parameter is used to configure the zero mark output at X520.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Zero mark enable	Yes	No	9674
	01	Zero marks synchronized with zero position of absolute encoders	Yes	No	9674

Note:

When the TM41 is operated in the SINAMICS mode (p4400 = 1), the following applies:

A new zero mark search is initiated by switching in the zero mark at the TM41. The zero mark is output at the TM41 as soon as it was synchronized with the encoder interconnected at connector input p4420.

For p4401.1 = 1, the following applies:

The zero pulse is output at X520 when the absolute encoder passes the zero position of the absolute position (modulo converted) in its absolute position.

For p4401.1 = 0, the following applies:

The zero pulse is output at X520 compatible with previous firmware versions. The zero pulse is output precisely when the TM41 (modulo converted) passes the position it was in when the 24 V supply was switched on.

r4402.0...2**CO/BO: TM41 incremental encoder emulation, status / Enc_emulat status**

TM41

Can be changed: -	Calculated: -	Access level: 3
Data type: Unsigned16	Dynamic index: -	Func. diagram: 9674, 9676
P-Group: Closed-loop control	Units group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	-

Description:

Displays the status of the incremental encoder emulation on Terminal Module 41 (TM41).

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Zero mark enabled	Yes	No	-
01	Tracks A/B enabled	Yes	No	-
02	Interface encoder emulation enabled	Yes	No	-

r4403**Incremental encoder emulation mode active / Enc_emul mode act**

TM41

Can be changed: -	Calculated: -	Access level: 3

Can be changed: C2(4)	Calculated: -	Access level: 3
Data type: Unsigned16	Dynamic index: -	Func. diagram: -
P-Group: Encoder	Units group: -	Unit selection: -
Not for motor type: -	Scaling: -	Expert list: 1
Min	Max	Factory setting
-	-	0001 bin

Description:

Sets the controller option for incremental encoder emulation on Terminal Module 41 (TM41).

p4404.0 = 1:

Control with minimum following error (pre-control active) for synchronous position and synchronous zero-mark emulation

p4404.1 = 1:

In the case of TTL encoders, the control response improves at slow velocities.

p4404.0 = p4404.1 = 0

Control with fixed following error.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Pre-control	Active	Inactive	-
01	Pre-control with adaptation for TTL encoder	Active	Inactive	-

Danger:

The option p4404.1 = 1 is only effective if TM41 DAC is being used.

If the possibility of a TM41 DAC (new) being replaced by a TM41 SAC (old) cannot be excluded, this option should not be set.

Note:

The parameter is only effective in the "SINAMICS" operating mode (p4400 = 1).

TM41 SAC: order no. = 6SL3055-0AA00-3PA0

TM41 DAC: order no. = 6SL3055-0AA00-3PA1

p4420		CI: TM41 incremental encoder emulation position actual value / Enc_emul s_act	
TM41	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer32	Dynamic index: -	Func. diagram: 9676
	P-Group: Setpoints	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting 0
Description:	Sets the signal source for the incremental encoder emulation position actual value.		
Recommend.:	The following BICO interconnection should be preferably set: CI: p4420 = r0479		
Dependency:	Refer to: p4400, r4403		
Notice:	General conditions for incremental encoder emulation can be found in the following literature: SINAMICS S120 Function Manual Drive Functions		
Note:	The parameter is not effective in the SIMOTION operating mode (p4400 = 0). Prerequisites for the signal source: For the incremental encoder emulation, an encoder is required that supplies precisely one zero mark per revolution. The following BICO interconnection should be preferably set: CI: p4420 = r0479. An encoder actual value (r0479) can only be interconnected once on a TM41. The zero mark of the incremental encoder is output at the encoder interface after successful internal, automatic synchronization. If an absolute encoder is connected to the TM41, then a zero mark is always output at the zero revolution at the encoder interface of the TM41. The same behavior applies even if no encoder parameter is interconnected.		

p4421	TM41 incremental encoder emulation deadtime compensation / Enc_emul t_dead		
TM41	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 9676
	P-Group: Setpoints	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -10.00	Max 10.00	Factory setting 0.00
Description:	Sets the deadtime compensation for incremental encoder emulation. This factor defines the multiplier in which the encoder position setpoint of the incremental encoder emulation is shifted depending on the velocity.		
Dependency:	For p4421 = 0, the deadtime compensation for the position actual value is switched out. For p4421 <> 0, the deadtime compensation is taken into account as follows: New actual value = actual value via CI: p4420 + delta s * p4421 delta s: Position change per sampling time (4099[3]), internally smoothed Refer to: p4400		
Note:	The parameter is not effective in the SIMOTION operating mode (p4400 = 0).		

p4422	TM41 position actual value inversion / TM41 s_act inv		
TM41	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: 9676 Unit selection: - Expert list: 1 Factory setting 0
Description:	Setting to invert the position actual value for Terminal Module 41 (TM41). 0 -> Position actual value (CI: p4420) is evaluated as normal. 1 -> Position actual value (CI: p4420) is processed inverted.		
Dependency:	Refer to: p4420		
p4423	TM41 standstill adaptation / TM41 ststl_adapt		
TM41	Can be changed: C2(4) Data type: Unsigned16 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2000	Access level: 3 Func. diagram: 9676 Unit selection: - Expert list: 1 Factory setting 4
Description:	Sets standstill adaptation on Terminal Module 41 (TM41). p4423 is used to specify the number of clock cycles (one clock cycle = p4099[3]) used for encoder standstill detection. Once this time has elapsed, any potential deviation is compensated when adaptation is active. Parameter value = 0: adaptation inactive Parameter value > 0: adaptation active		
Dependency:	Refer to: r4403, p4404, p4420		
Danger:	The option p4404.1 = 1 is only effective if TM41 DAC is being used. If the possibility of a TM41 DAC (new) being replaced by a TM41 SAC (old) cannot be excluded, this option should not be set. TM41 SAC: order no. = 6SL3055-0AA00-3PA0 TM41 DAC: order no. = 6SL3055-0AA00-3PA1		
			
Note:	The parameter is only effective in the SINAMICS operating mode (p4400 = 1). The parameter value must be assigned a value of 4 or more to ensure that the system functions properly. This parameter is only relevant in the following cases: - TTL encoder is available - the controller option "Pre-control with adaptation for TTL encoder" has been activated (p4404.1 = 1)		
p4426	Incremental encoder emulation, pulses for zero mark / Enc_emul pulses ZM		
TM41	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 8192	Access level: 3 Func. diagram: 9674 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets pulse number to output the zero mark for the incremental encoder simulation/emulation. Example: p0408 = 2048 (encoder pulses) p4426 = 512 (pulses for the zero mark) --> Position direction: The zero mark is output after 512 pulses. --> Negative direction: The zero mark is output after 1536 pulses.		
Dependency:	Refer to: p0408		
Note:	The pulses for the zero mark (p4426) must be less than the encoder pulse number (p0408). For p4400 = 1, this parameter has no effect.		

p4600[0...n]	Motor temperature sensor 1 sensor type / Temp_sens 1 type		
SERVO, VECTOR	Can be changed: C2(3), U, T	Calculated: -	Access level: 2

	P-Group: Motor	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	32	0

Description: Sets the sensor type of the third temperature sensor for the motor temperature monitoring.

Value:

- 0: No sensor
- 10: PTC fault
- 11: PTC alarm
- 12: PTC alarm & timer
- 20: KTY84
- 30: Bimetallic NC contact fault
- 31: Bimetallic NC contact alarm
- 32: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
Terminals for PTC triplet and bimetallic: X200.3, X200.4
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

p4603[0...n] Motor temperature sensor 4 sensor type / Temp_sens 4 type

SERVO, VECTOR	Can be changed: C2(3), U, T	Calculated: -	Access level: 2
	Data type: Integer16	Dynamic index: EDS, p0140	Func. diagram: 8016
	P-Group: Motor	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	32	0

Description: Sets the sensor type of the fourth temperature sensor for the motor temperature monitoring.

Value:

- 0: No sensor
- 10: PTC fault
- 11: PTC alarm
- 12: PTC alarm & timer
- 20: KTY84
- 30: Bimetallic NC contact fault
- 31: Bimetallic NC contact alarm
- 32: Bimetallic NC contact alarm & timer

Dependency: Refer to: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 10.
Terminals for PTC triplet: X200.5, X200.6
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [%]	- [%]	- [%]
Description:	Displays the functional reserve of the encoder selected via p4650. 0 ... 25 %: The function limit has been reached. A service is recommended. 26 ... 100 %: The encoder is working in the specified range.		
Index:	[0] = Incremental [1] = Reserved [2] = Abs track [3] = Code conn		
Dependency:	Refer to: p4650		

Note: Value = 999 means:
 - the component specified in p4650 is not connected
 - the encoder does not support the display of the functional reserve

p4660	Sensor module filter bandwidth / SMx f_BW		
ENCODER	Can be changed: - Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00 [kHz]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 20000.00 [kHz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [kHz]
Description:	Sets the filter bandwidth for Sensor Modules SMx10 (resolver) and SMx20 (sin/cos encoder). The value set on the Sensor Module is displayed in r4661. The Sensor Module hardware only supports the following values: - 0: The Sensor Module's default is used. - 50 kHz - 170 kHz - 500 kHz - Unlimited - only the bandwidth of the Op Amp is effective.		
Dependency:	Refer to: r4661		
Note:	A value of zero is displayed if an encoder is not present.		

p4660[0...2]	Sensor module filter bandwidth / SMx f_BW		
SERVO, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min 0.00 [kHz]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 20000.00 [kHz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [kHz]
Description:	Sets the filter bandwidth for Sensor Modules SMx10 (resolver) and SMx20 (sin/cos encoder). The value set on the Sensor Module is displayed in r4661. The Sensor Module hardware only supports the following values: - 0: The Sensor Module's default is used. - 50 kHz - 170 kHz - 500 kHz - Unlimited - only the bandwidth of the Op Amp is effective.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: r4661		
Note:	A value of zero is displayed if an encoder is not present.		

r4661	Sensor Module filter bandwidth display / SMx f_BW disp		
ENCODER	Can be changed: - Data type: FloatingPoint32 P-Group: Encoder Not for motor type: - Min - [kHz]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [kHz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [kHz]
Description:	Displays the effective filter bandwidth for Sensor Modules SMx10 (resolver) and SMx20 (sin/cos encoder). The bandwidth of the filter is set using p4660.		

Dependency: Refer to: p4660

Note: A value of zero is displayed if an encoder is not present.

r4661[0...2] Sensor Module filter bandwidth display / SMx f_BW disp

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min - [kHz]	Max - [kHz]	Factory setting - [kHz]

Description: Displays the effective filter bandwidth for Sensor Modules SMx10 (resolver) and SMx20 (sin/cos encoder).
The bandwidth of the filter is set using p4660.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: Refer to: p4660

Note: A value of zero is displayed if an encoder is not present.

p4670[0...n] Analog sensor configuration / Ana_sens config

ENCODER, SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: Unsigned32	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting 0000 bin

Description: Sets the configuration for evaluation on the analog sensor.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	06	Set velocity to 0	Yes	No	-
	09	Fault/Alarm messages	Alarm	Fault	-
	10	Chann B act	Yes	No	-
	11	Chann A act	Yes	No	-
	13	Commutation angle constant	Yes	No	-

Notice:
Re bit 06:
Setting the bit sets the velocity actual value (r0061) permanently to 0.
Re bit 13:
Setting the bit sets the commutation angle permanently to the commutation angle offset (p0431).

Note:
Re bit 09:
A setting of bit = 0 will trigger a fault for the relevant channel if the actual value is invalid.
A setting of bit = 1 will trigger an alarm for the relevant channel if the actual value is invalid.
Re bit 10, 11:
If both channels are activated, the actual value is generated from the mean value of both channels. If a channel fails (actual value invalid), it is not included when the mean value is generated.

p4671[0...n] Analog sensor input / Ana_sens inp

ENCODER, SERVO, VECTOR	Can be changed: C2(4)	Calculated: -	Access level: 4
	Data type: Integer16	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 3	Factory setting 0

Description: Sets the input circuit for the analog sensor.

Value:

- 0: Differential
- 1: Single-ended A, B
- 2: Single-ended A*, B*
- 3: Single-ended A, B sensitive

Note:

p4671 = 0:
The two signals on a track are evaluated differentially.

p4671 = 1:
Only the non-inverted signal on a track is evaluated.

p4671 = 2:
Only the inverted signal on a track is evaluated.

p4671 = 3:
Only the non-inverted signal on a track (high resolution) is evaluated.

p4672[0...n] Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0

ENCODER, SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -10.0000 [V]	Max 10.0000 [V]	Factory setting 0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.
At this voltage channel A supplies an actual value of zero.

p4673[0...n] Analog sensor channel A voltage per encoder period / Ana_sens A U/per

ENCODER, SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -10.0000 [V]	Max 10.0000 [V]	Factory setting 6.0000 [V]

Description: Sets the output voltage range to be mapped for the connected analog sensor.
The voltage range is determined by the following parameters:

- p4672 (voltage at actual value 0)
- p4673 (voltage per encoder period)

Note: The minimum actual value which can be mapped is equal to p4672 - p4673/2.
The maximum actual value which can be mapped is equal to p4672 + p4673/2.

p4674[0...n] Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0

ENCODER, SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -10.0000 [V]	Max 10.0000 [V]	Factory setting 0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.
At this voltage channel B supplies an actual value of zero.

p4675[0...n]		Analog sensor channel B voltage per encoder period / Ana_sens B U/per

	P-Group: -	Units group: -		Unit selection: -	
	Not for motor type: -	Scaling: -		Expert list: 1	
	Min -10.0000 [V]	Max 10.0000 [V]		Factory setting 6.0000 [V]	
Description:	Sets the output voltage range to be mapped for the connected analog sensor. The voltage range is determined by the following parameters: - p4674 (voltage at actual value 0) - p4675 (voltage per encoder period)				
Note:	The minimum actual value which can be mapped is equal to p4674 - p4675/2. The maximum actual value which can be mapped is equal to p4674 + p4675/2.				

p4676[0...n]		Analog sensor range limit threshold / Ana_sens lim thr			
ENCODER, SERVO, VECTOR	Can be changed: U, T	Calculated: -		Access level: 4	
	Data type: FloatingPoint32	Dynamic index: EDS, p0140		Func. diagram: -	
	P-Group: -	Units group: -		Unit selection: -	
	Not for motor type: -	Scaling: -		Expert list: 1	
	Min 0.0 [%]	Max 100.0 [%]		Factory setting 100.0 [%]	
Description:	Sets the threshold for limit monitoring of the absolute actual value on the analog sensor. If this threshold is overshoot by the actual value of a channel, a corresponding fault/alarm (p4670.9) is output.				
Dependency:	Refer to: p4673, p4675				

p4677[0...n]		Analog sensor LVDT configuration / Ana_sens LVDT conf			
ENCODER, SERVO, VECTOR	Can be changed: C2(4)	Calculated: -		Access level: 4	
	Data type: Unsigned32	Dynamic index: EDS, p0140		Func. diagram: -	
	P-Group: Encoder	Units group: -		Unit selection: -	
	Not for motor type: -	Scaling: -		Expert list: 1	
	Min -	Max -		Factory setting 0000 bin	
Description:	Sets the configuration for LVDT mode on the analog sensor.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	LVDT ON	Yes	No	-
	01	Track B excitation	Yes	No	-
	02	Fixed value amplitude	Yes	No	-
	03	Fixed value amplitude and phase	Yes	No	-

p4680[0...n]		Zero mark monitoring tolerance permissible / ZM_monit tol perm			
ENCODER, SERVO, VECTOR	Can be changed: C2(4)	Calculated: -		Access level: 3	
	Data type: Unsigned32	Dynamic index: EDS, p0140		Func. diagram: -	
	P-Group: Encoder	Units group: -		Unit selection: -	
	Not for motor type: -	Scaling: -		Expert list: 1	
	Min 0	Max 1000		Factory setting 4	
Description:	Sets the permissible tolerance in encoder pulses for the zero mark distance in the context of zero mark monitoring. Causes fault F3x100 to appear less frequently.				
Dependency:	Refer to: p0430 Refer to: F31100				
Note:	The parameter is activated using p0430.21 = 1 (zero mark tolerance).				

p4681[0...n]	Zero mark monitoring, tolerance window limit 1 positive / ZM tol lim 1 pos		
ENCODER, SERVO, VECTOR	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 1000	Factory setting 2
Description:	Sets the positive tolerance window in encoder pulses for limit 1 for the zero mark monitoring. If the deviation is less than this limit, the PPR is not corrected. If it is higher than this limit, fault F3x131 is triggered. If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (r4688). The accumulator can be deactivated using p0437.7.		
Dependency:	Refer to: p0437, p4688 Refer to: F31131		
Note:	This monitoring is activated by setting p0437.2 = 1 (position actual value correction). The positive limit describes additional pulses due to EMC.		
p4682[0...n]	Zero mark monitoring, tolerance window limit 1 negative / ZM tol lim 1 neg		
ENCODER, SERVO, VECTOR	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Integer32	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -1001	Max 0	Factory setting -1001
Description:	Sets the negative tolerance window in encoder pulses for limit 1 for the zero mark monitoring. If the deviation is less than this limit, the PPR is not corrected. If it is higher than this limit, fault F3x131 is triggered. If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (r4688). The accumulator can be deactivated using p0437.7.		
Dependency:	Refer to: p0437, p4681, p4688 Refer to: F31131		
Note:	This monitoring is activated by setting p0437.2 = 1 (position actual value correction). For a set value = -1001, the negated value of p4681 is effective. The negative limit describes the pulses lost due to a covered glass panel in the incremental encoder.		
p4683[0...n]	Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos		
ENCODER, SERVO, VECTOR	Can be changed: C2(4)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: EDS, p0140	Func. diagram: -
	P-Group: Encoder	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 100000	Factory setting 0
Description:	Sets the positive tolerance window in encoder pulses for limit 2 for the zero mark monitoring. If the zero mark deviation is higher than the tolerance set in p4681 and p4682 and fault F3x131 is re-parameterized to alarm (A) or no message (N), the accumulator p4688 is compared with this parameter and, if applicable, alarm A3x422 is output for 5 seconds.		
Dependency:	Refer to: p0437, p4681, p4682, p4688 Refer to: F31131, A31422		
Note:	Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).		

p4684[0...n]	Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg		
ENCODER, SERVO, VECTOR	Can be changed: C2(4) Data type: Integer32 P-Group: Encoder Not for motor type: - Min -100001	Calculated: - Dynamic index: EDS, p0140 Units group: - Scaling: - Max 0	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -100001
Description:	Sets the negative tolerance window in encoder pulses for limit 2 for the zero mark monitoring. If the zero mark deviation is higher than the tolerance set in p4681 and p4682 and fault F3x131 is re-parameterized to alarm (A) or no message (N), the accumulator p4688 is compared with this parameter and, if applicable, alarm A3x422 is output for 5 seconds.		
Dependency:	Refer to: p0437, p4683, p4688 Refer to: F31131, A31422		
Note:	Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction). For a set value = -100001, the negated value of p4683 is effective.		
p4685[0...n]	Speed actual value mean value generation / n_act mean val		
ENCODER, SERVO, VECTOR	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dynamic index: EDS, p0140 Units group: - Scaling: - Max 20	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the number of current controller clock cycles for mean value generation of the speed actual value.		
Note:	Value = 0, 1: No mean value generation. Higher values also mean higher dead times for the speed actual value.		
p4686[0...n]	Zero mark minimum length / ZM min length		
ENCODER, SERVO, VECTOR	Can be changed: C2(4) Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min 0	Calculated: - Dynamic index: EDS, p0140 Units group: - Scaling: - Max 10	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the minimum length for the zero mark.		
Dependency:	Refer to: p0425, p0437		
Note:	The value for the minimum length of the zero mark must be set less than p0425. The parameter is activated using p0437.1 = 1 (zero mark edge detection).		
p4688	CO: Zero mark monitoring, differential pulse count / ZM diff_pulse qty		
ENCODER	Can be changed: T Data type: Integer32 P-Group: - Not for motor type: - Min -2147483648	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2147483647	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Displays the number of differential pulses for the zero mark monitoring that have accumulated. If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (p4688).		
Dependency:	Refer to: p4681, p4682, p4683, p4684		
Note:	The display can only be reset to zero.		

p4688[0...2]	CO: Zero mark monitoring, differential pulse count / ZM diff_pulse qty		
SERVO, VECTOR	Can be changed: T Data type: Integer32 P-Group: - Not for motor type: - Min -2147483648	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2147483647	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Displays the number of differential pulses for the zero mark monitoring that have accumulated. If fault F3x131 is re-parameterized to alarm (A) or no message (N), the encoder pulses which have not been corrected are added to the accumulator (p4688).		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: p4681, p4682, p4683, p4684		
Note:	The display can only be reset to zero.		
r4689	CO: Squarewave encoder, diagnostics / Sq-wave enc diag		
ENCODER	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the encoder status according to PROFIdrive for a squarewave encoder.		
Dependency:	Refer to: A31422		
Note:	In the case of alarm A3x422 being output, this parameter is set for 100 ms.		
r4689[0...2]	CO: Squarewave encoder, diagnostics / Sq-wave enc diag		
SERVO, VECTOR	Can be changed: - Data type: Unsigned32 P-Group: Encoder Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the encoder status according to PROFIdrive for a squarewave encoder.		
Index:	[0] = Encoder 1 [1] = Encoder 2 [2] = Encoder 3		
Dependency:	Refer to: A31422		
Note:	In the case of alarm A3x422 being output, this parameter is set for 100 ms.		
p4690	SMI spare part component number / SMI comp_no		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: T Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 399	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the component number for the SMI/DQI for which motor and/or encoder data should be saved, deleted or downloaded.		
Dependency:	Refer to: p4691, p4692, p4693		

Note: DQI: DRIVE-CLiQ Sensor Integrated
SMI: SINAMICS Sensor Module Integrated

p4691 Save/download SMI spare part data / Save/DL SMI data

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 38	Factory setting 0

Description: Setting for the saving/downloading/deletion of motor and/or encoder data for the component specified in p4690 (SMI/DQI).
A backup of this data can be saved to non-volatile memory. The backup procedure is performed automatically as part of the function for saving to non-volatile memory (p0977 = 1 or "Copy RAM to ROM"). If a part is replaced, the backup can be reloaded.

Procedure:

p4690 = set component number

p4691 = 1, 2, 30: Set the required procedure (save/download/delete).

p4691 = 9, 10, 36: Feedback signal on successful completion of the procedure.

p4691 = 11... 21, 37, 38: Error vales if the procedure could not be executed successfully.

Value:

- 0: Inactive
- 1: Save SMI data
- 2: Download SMI data
- 9: SMI data downloaded and POWER ON required for component
- 10: SMI data backup complete
- 11: SMI data backup for selected component not found
- 12: Selected component not available or not connected
- 13: Insufficient memory space for backup
- 14: Format of saved data is incompatible
- 15: Transfer fault during data download
- 16: Transfer fault during data backup
- 17: Data backup does not match parameterized encoder/motor
- 18: Data backup directory not permissible
- 19: Component already contains data
- 20: Component does not contain any data
- 21: Component is not an SMI or a DQI
- 30: Delete SMI data
- 35: Confirmation of SMI data delete required
- 36: SMI data deleted and POWER ON required for component
- 37: Access level not sufficient for delete
- 38: Delete SMI data not permitted for component

Dependency: Refer to: p4690, p4692, p4693

Notice: Once SMI data has been deleted or downloaded successfully, the component has to be powered off.

Note: SMI: SINAMICS Sensor Module Integrated

DLQ encoder: DRIVE-CLiQ encoder

Help for error value = 11:

- Save the data for the original SMI on the memory card.
- Use an SMI with a suitable hardware version.

Help for error value = 12:

- Set the correct component number or connect the component.

Help for error value = 13:

- Use a memory card with more memory space.

Help for error value = 14:

- Create a data backup on the memory card corresponding to the SMI type.

Help for error value = 15:

- Check the DRIVE-CLiQ wiring for the component.

- Help for error value = 16:
- Check the DRIVE-CLiQ wiring for the component.
- Help for error value = 17:
- Save the data for the original SMI on the memory card.
- Help for error value = 18:
- Set parameter p4693 to an appropriate value.
- Help for error value = 19:
- Perform an SMI delete or use a blank SMI.
- Help for error value = 20:
- Use an SMI card that is not blank.
- Help for error value = 21:
- Set the correct component number (p4690).
- Help for error value = 35:
- Reset parameter p4691 to 30.
- Help for error value = 37:
- Set the access level to Expert or higher.
- Help for error value = 38:
- Set the correct component number (p4690 >= 200).

p4692 Save SMI spare part data of all SMIs / Save SMI data			
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: T	Calculated: -	Access level: 1
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 29	Factory setting 0
Description:	Setting to back up the data of all SMIs and DQIs featured in the target topology.		
Value:	0: Inactive 1: Save data of all SMIs and DQIs 10: Save all data successful 13: Insufficient memory space for backup 16: Transfer fault during data backup 20: Component does not contain any data 29: Not all components from target topology saved		
Note:	SMI: SINAMICS Sensor Module Integrated p4692 = 10: Automatic on successful completion of backup procedure. p4692 = 13, 16, 20, 29: Error vales if the procedure could not be executed successfully. The procedure must be repeated if the data save operation was interrupted (e.g. if the power supply voltage failed). Help for error value = 13: - Use a memory card with more memory space. Help for error value = 16: - check the DRIVE-CLiQ connection. Help for error value = 20: - Use an SMI card that is not blank. Help for error value = 29: - Check and correct the target and actual topologies for the SMIs. - Repeat the save procedure.		

p4693[0...1] SMI spare part data backup directory / SMI dat_bkup dir			
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: T Data type: Unsigned16 P-Group: Displays, signals Not for motor type: - Min 0 Max 399	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the directory for downloading and saving data. Example: The SMI has the component number 5 and the SMI data (motor/encoder data) is to be stored in subdirectory C205. --> p4690 = 5, p4693[0] = 205, p4691 = 1		
Index:	[0] = Subdirectory selection [1] = Reserved		
Dependency:	Refer to: p4691, r4694		
Notice:	If p4693[0] is not equal to 0 and p4693[0] is not equal to p4690, the following applies: - Only a number > 200 may be selected for the subdirectory when saving. - In the case of downloads, a selection for the subdirectory may only be made for an SMI with a component number > 200 (preliminary component number) (p4690 > 200).		
Note:	SMI: SINAMICS Sensor Module Integrated Re index 0: This index is used to select the subdirectory for saving and downloading data. The motor order number (MLFB) of the corresponding data backup is displayed in r4694. For p4693[0] = 0, the following applies: The directory is determined by the setting of p4690.		

r4694[0...19] SMI spare part data backup motor order number / SMI dat_bkup MLFB			
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned8 P-Group: Displays, signals Not for motor type: - Min - Max -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the motor order number (MLFB) of the data backup selected with p4693.		
Dependency:	Refer to: p4691, p4692		
Caution:	If the selected subdirectory contains a number of data sets, "More Datasets" is displayed in r4694[0...19]. If there is no SMI data (motor/encoder data) in the selected subdirectory or if the selected subdirectory does not exist, the following applies: - The number of the next subdirectory located is displayed. - This subdirectory is not checked for valid SMI data. - If another subdirectory cannot be located, 0 is displayed in r4694[0...19].		
			
Note:	SMI: SINAMICS Sensor Module Integrated

Description:	Sets the trigger threshold for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 2, 3.		
p4713[0...1]	Trace tolerance band trigger threshold / Trace trig thresh		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36	Calculated: - Dynamic index: - Units group: - Scaling: - Max 340.28235E36	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.00
Description:	Sets the first trigger threshold for trigger via tolerance band.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 4, 5.		

p4714[0...1]	Trace tolerance band trigger threshold / Trace trig thresh		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36 Max 340.28235E36	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.00
Description:	Sets the second trigger threshold for trigger via tolerance band		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 4, 5.		
p4715[0...1]	Trace bit mask trigger, bit mask / Trace trig mask		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0 Max 4294967295	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the bit mask for the bit mask trigger.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 6.		
p4716[0...1]	Trace, bit mask trigger, trigger condition / Trace Trig_cond		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0 Max 4294967295	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Sets the trigger condition for bit mask trigger.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only effective when p4710 = 6.		
p4717	Measuring function, number of averaging operations / Meas fct avg qty		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0 Max 255	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
p4718	Measuring function, number of stabilizing periods / MeasFct StabPerQty		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0 Max 255	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0

r4719[0...1]	Trace trigger index / Trace Trig_index		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the trigger index in the trace buffer. The trigger event occurred at this point.		
Index:	[0] = Trace 0 [1] = Trace 1		
Dependency:	Only valid when p4705 = 4.		

p4720[0...1]	Trace recording cycle / Trace record_cyc		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 60000.000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1.000 [ms]
Description:	Sets the recording cycle for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4721[0...1]	Trace recording time / Trace record_time		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3600000.000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1000.000 [ms]
Description:	Sets the recording time for the trace.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4722[0...1]	Trace trigger delay / Trace trig_delay		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -3600000.000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3600000.000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.000 [ms]
Description:	Sets the trigger delay for the trace. Trigger delay < 0: Pretrigger: Tracing (recording) starts the selected time before the trigger event actually occurs. Trigger delay > 0: Post trigger: Tracing does not start until the set time after the trigger event.		
Index:	[0] = Trace 0 [1] = Trace 1		

p4723[0...1]	Time slice cycle for trace / Trace cycle		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.03125 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 4.00000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0.12500 [ms]
Description:	Sets the time slice cycle in which the trace is called.		
Index:	[0] = Trace 0 [1] = Trace 1		
p4724[0...1]	Trace average in the time range / Trace average		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned8 P-Group: Trace and function generator Not for motor type: - Min 0000 bin	Calculated: - Dynamic index: - Units group: - Scaling: - Max 0001 bin	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 bin

r4740[0...16383] Trace 0 trace buffer signal 0 floating point / Trace 0 trace sig0

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Trace and function generator	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min -	Max -	Factory setting -

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0.
The trace (record) buffer is sub-divided into memory banks, each containing 16384 values. Parameter p4795 can be used to toggle between the individual banks.
Example A:
The first 16384 values of signal 0, trace 0 are to be read out.
In this case, memory bank 0 is set with p4795 = 0. The first 16384 values can now be read out using r4740[0] to r4740[16383].
Example B:
The values 16385 to 32768 from signal 0, trace 0 are to be read out.
In this case, memory bank 1 is set with p4795 = 1. The values can now be read out in r4740[0] to r4740[16383].

Dependency: Refer to: p4795

Description: Displays the trace buffer (record buffer) for trace 1 and signal 4.

Dependency: Refer to: r4740, p4795

r4755[0...16383] Trace 1 trace buffer signal 5 floating point / Trace 1 trace sig5

CU_CX32, CU_I,	Can be changed: -	Calculated: -	Access level: 3
CU_S,	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
CU_S_CU310DP,	P-Group: Trace and function generator	Units group: -	Unit selection: -
CU_S_CU310PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S_S150	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 5.

Dependency: Refer to: r4740, p4795

r4756[0...16383] Trace 1 trace buffer signal 6 floating point / Trace 1 trace sig6

CU_CX32, CU_I,	Can be changed: -	Calculated: -	Access level: 3
CU_S,	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
CU_S_CU310DP,	P-Group: Trace and function generator	Units group: -	Unit selection: -
CU_S_CU310PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S_S150	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 6.

Dependency: Refer to: r4740, p4795

r4757[0...16383] Trace 1 trace buffer signal 7 floating point / Trace 1 trace sig7

CU_CX32, CU_I,	Can be changed: -	Calculated: -	Access level: 3
CU_S,	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
CU_S_CU310DP,	P-Group: Trace and function generator	Units group: -	Unit selection: -
CU_S_CU310PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S_S150	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 7.

Dependency: Refer to: r4740, p4795

r4760[0...16383] Trace 0 trace buffer signal 0 / Trace 0 trace sig0

CU_CX32, CU_I,	Can be changed: -	Calculated: -	Access level: 3
CU_S,	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
CU_S_CU310DP,	P-Group: Trace and function generator	Units group: -	Unit selection: -
CU_S_CU310PN,	Not for motor type: -	Scaling: -	Expert list: 0
CU_S_S150	Min	Max	Factory setting
	-	-	-

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0 as integer number.

Note: For signals, data type I32 or U32, the trace buffer is assigned as follows:
r4760[0] = value 0
r4760[1] = value 1
...
r4760[8191] = value 8191
For signals, data type I16 or U16, the trace buffer is assigned as follows:
r4760[0] = value 0 (bit 31 ... 16) and value 1 (bit 15 ... 0)
r4760[1] = value 2 (bit 31 ... 16) and value 3 (bit 15 ... 0)
...
r4760[8191] = value 16382 (bit 31 ... 16) and value 16383 (bit 15 ... 0)
For signals, data type I8 or U8, the trace buffer is assigned as follows:
r4760[0] = value 0 (bit 31 ... 24) value 1 (bit 23 ... 16) value 2 (bit 15 ... 8) value 3 (bit 7 ... 0)
r4760[1] = value 4 (bit 31 ... 24) value 5 (bit 23 ... 16) value 6 (bit 15 ... 8) value 7 (bit 7 ... 0)
...
r4760[8191] = value 32764 (bit 31 ... 24) value 32765 (bit 23 ... 16) value 32766 (bit 15 ... 8) value 32767 (bit 7 ... 0)

r4761[0...16383] Trace 0 trace buffer signal 1 / Trace 0 trace sig1

CU_CX32, CU_I,	Can be changed: -	Calculated: -	Access level: 3
CU_S,	Data type: Unsigned32	Dynamic index: -	Func. diagram: -

Index:	[0] = Trace 0 [1] = Trace 1		

p4795	Trace memory bank changeover / Trace mem changeov		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min 0 Max 500	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Changes over the memory bank to read out the contents of the trace buffer.		
Dependency:	Refer to: r4740, r4741, r4742, r4743, r4750, r4751, r4752, r4753		
r4799	Trace memory location free / Trace mem free		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned32 P-Group: Trace and function generator Not for motor type: - Min - Max -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the free memory for the trace in bytes.		
Dependency:	Refer to: r4708		
p4800	Function generator control / FG control		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0 Max 3	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	The function generator is started with p4800 = 1. The signal is only generated for a 1 signal of binector input p4819.		
Value:	0: Stop function generator 1: Start function generator 2: Check function generator parameterization 3: Start function generator without enable signals		
Dependency:	Refer to: p4819		
r4805	Function generator status / FG status		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 0 Max 6	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual status of the function generator.		
Value:	0: Inactive 1: Generate accelerating ramp to offset 2: Generate parameterized signal shape 3: Generate braking ramp 4: Function generator stopped due to missing enable signals 5: Function generator waits for BI: p4819 6: Function generator parameterization has been checked		
Dependency:	Refer to: p4800, p4819		

r4806.0 BO: Function generator status signal / FG status signal

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Trace and function generator	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status of the function generator.
0 signal: Function generator inactive
1 signal: Function generator running

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Bit 0	On	Off	-

p4810 Function generator mode / FG operating mode

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Trace and function generator	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	99	0

Description: Sets the operating mode of the function generator.

Value:
0: Connection at connector output r4818
1: Connection at current setpoint after filter and r4818
2: Connection as disturbing torque and r4818
3: Connection at speed setpoint after filter and r4818
4: Connection at current setpoint before filter and r4818
5: Connection at speed setpoint before filter and r4818
99: Connection at physical address and r4818

p4812 Function generator physical address / FG phys address

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Trace and function generator	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	4294967295	0

Description: Sets the physical address where the function generator is to be connected.

Dependency: Only effective when p4810 = 99.

p4813 Function generator physical address reference value / FG phys addr ref

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Trace and function generator	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1.00	1000000.00	1.00

Description: Sets the reference value for 100 % for referred inputs.

Dependency: Only effective when p4810 = 99.

p4815[0...2]	Function generator drive number / FG drive number		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned16 P-Group: Trace and function generator Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Selects the required drive where the function generator is to be connected.		
Index:	[0] = First drive for connection [1] = Second drive for connection [2] = Third drive for connection		
Dependency:	Only effective when p4810 = 1, 2, 3, 4 or 5.		
Note:	For the function generator, only type SERVO or VECTOR drives can be used.		
r4818	CO: Function generator output signal / FG output signal		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min - [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the output signal for the function generator.		
Dependency:	Refer to: p4810		
Note:	The value is displayed independently of the function generator mode. The signal is available as connector output for an ongoing interconnection.		
p4819	BI: Function generator control / FG control		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: Trace and function generator Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal source to control the function generator. When the function generator is running, signal generation is stopped with a 0 signal from BI: p4819 and p4800 is set to 0.		
Dependency:	Refer to: p4800		
p4820	Function generator signal shape / FG signal shape		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Integer16 P-Group: Trace and function generator Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 5	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the signal to be generated for the function generator.		
Value:	1: Square-wave 2: Staircase 3: Delta 4: Binary noise - PRBS (Pseudo Random Binary Signal) 5: Sine-wave		

p4821	Function generator period / FG period duration		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 60000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1000.00 [ms]
Description:	Sets the period of the signal to be generated for the function generator.		
Dependency:	Ineffective when p4820 = 4 (PRBS).		
p4822	Function generator pulse width / FG pulse width		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 60000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the pulse width for the signal to be generated for the function generator.		
Dependency:	Only effective when p4820 = 1 (square-wave).		
p4823	Function generator bandwidth / FG bandwidth		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.0025 [Hz]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 16000.0000 [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 4000.0000 [Hz]
Description:	Sets the bandwidth for the signal to be generated for the function generator.		
Dependency:	Only effective when p4820 = 4 (PRBS). Refer to: p4830 Refer to: A02041		
p4824	Function generator amplitude / FG amplitude		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -1600.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1600.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 5.00 [%]
Description:	Sets the amplitude for the signal to be generated for the function generator.		
Dependency:	Units are dependent on p4810. If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current). If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).		

p4825	Function generator 2nd amplitude / FG 2nd amplitude		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -1600.00 [%] Max 1600.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 7.00 [%]
Description:	Sets the second amplitude for the signal to be generated for the function generator.		
Dependency:	Only effective for p4820 = 2 (staircase). Units are dependent on p4810. If p4810 = 1, 2, 4: The amplitude is referred to p2002 (reference current). If p4810 = 3, 5: The amplitude is referred to p2000 (reference speed).		
p4826	Function generator offset / FG offset		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -1600.00 [%] Max 1600.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets the offset (DC component) of the signal to be generated for the function generator.		
Dependency:	Units are dependent on p4810. If p4810 = 1, 2, 4: The offset is referred to p2002 (reference current). If p4810 = 3, 5: The offset is referred to p2000 (reference speed). If p4810 = 2: In order to avoid the undesirable effects of play (backlash), the offset does not act on the current setpoint, but instead on the speed setpoint.		
p4827	Function generator ramp-up time to offset / FG ramp-up offset		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [ms] Max 100000.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 32.00 [ms]
Description:	Sets the ramp-up time to the offset for the function generator.		
p4828	Function generator lower limit / FG lower limit		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -10000.00 [%] Max 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -100.00 [%]
Description:	Sets the lower limit for the function generator.		
Dependency:	For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).		

p4829	Function generator upper limit / FG upper limit		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00 [%] Max 10000.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Factory setting 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
Description:	Sets the upper limit for the function generator.		
Dependency:	For p4810 = 2 the limit only applies to the current setpoint, but not the speed setpoint (offset).		
p4830	Function generator time slice cycle / FG time slice		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.03125 [ms] Max 2.00000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Factory setting 0.12500 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
Description:	Sets the time slice cycle in which the function generator is called.		
p4831	Function generator amplitude scaling / FG amplitude scal		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min 0.00000 [%] Max 200.00000 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Factory setting 100.00000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
Description:	Sets the scaling for the amplitude of the signal waveforms for all output channels. The value can be changed while the function generator is running.		
p4832[0...2]	Function generator amplitude scaling / FG amplitude scal		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36 [%] Max 340.28235E36 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Factory setting 100.00000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
Description:	Sets the scaling for the amplitude of the signal waveforms separately for each output channel. The value cannot be changed while the function generator is running.		
Index:	[0] = First drive for connection [1] = Second drive for connection [2] = Third drive for connection		
p4833[0...2]	Function generator offset scaling / FG offset scal		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: FloatingPoint32 P-Group: Trace and function generator Not for motor type: - Min -340.28235E36 [%] Max 340.28235E36 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Factory setting 100.00000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
Description:	Sets the scaling for the offset of the signal waveforms separately for each output channel. The value cannot be changed while the function generator is running.		

Index: [0] = First drive for connection
 [1] = Second drive for connection
 [2] = Third drive for connection

r4899 Status word sequence control / ZSW seq_ctrl

TM41	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word of the sequence control from Terminal Module 41 (TM41).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ready for sw on	Yes	No	-
	01	Ready	Yes	No	-
	02	Operation enabled	Yes	No	-
	03	Fault present	Yes	No	-
	04	Coast down active	No	Yes	-
	05	Quick Stop active	No	Yes	-
	06	Sw on inhibit	Yes	No	-
	07	Alarm present	Yes	No	-
	09	Control request	Yes	No	-
	14	Motor rotates forwards	Yes	No	-

r4950 OA application count / OA no

All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: OEM range	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	10	-

Description: Displays the number of OA applications installed on the memory card/device memory.

Dependency: Refer to: r4951, r4952, r4955, p4956, r4957, r4958, r4959, r4960

Note: OA: Open Architecture

r4951 OA application identifier, total length / OA ID length

All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: OEM range	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 0
	Min	Max	Factory setting
	0	90	-

Description: Displays the total length of the IDs of all the OA applications installed on the memory card/device memory.

Dependency: Refer to: r4950, r4952, r4955, p4956, r4957, r4958, r4959, r4960

Note: The identifier of an OA application comprises a maximum of 8 characters plus separator.

r4952	OA application GUID, total length / OA GUID length		
All objects	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 180	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the total length of the GUIDs of all the OA applications installed on the memory card/device memory.		
Dependency:	Refer to: r4950, r4951, r4955, p4956, r4957, r4958, r4959, r4960		
Note:	The GUID of an OA application comprises 16 characters plus 1 character major information plus 1 character, minor information. GUID: Globally Unique Identifier		
r4955[0...n]	OA application identifier / OA ID		
All objects	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: r4951 Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the IDs of all the OA applications installed on the memory card/device memory. r4955[0...8]: Identifier of OA application 1 r4955[9...17]: Identifier of OA applications 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, p4956, r4957, r4958, r4959, r4960		
Notice:	If there is no OA application, then it is not possible to access an index.		
p4956[0...n]	OA application activation / OA act		
All objects	Can be changed: C1, T Data type: Integer16 P-Group: OEM range Not for motor type: - Min 0	Calculated: - Dynamic index: r4950 Units group: - Scaling: - Max 1	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Setting to activate the OA applications installed on the memory card/device memory. r4956[0]: Activates OA application 1 r4956[1]: Activates OA application 2, ...		
Value:	0: OA application inactive 1: OA application active		
Dependency:	Refer to: r4950, r4951, r4952, r4955, r4957, r4958, r4959, r4960		
Notice:	If there is no OA application, then it is not possible to access an index.		
r4957[0...n]	OA application version / OA version		
All objects	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: r4950 Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the versions of the OA applications installed on the memory card/device memory. r4957[0]: Version of OA application 1 r4957[1]: Version of OA application 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4958, r4959, r4960		

Notice: If there is no OA application, then it is not possible to access an index.

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r4958[0...n]	OA application interface version / OA int_version		
All objects	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: r4950 Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the interface versions of the OA applications installed on the memory card/device memory. r4958[0]: Interface version of OA application 1 r4958[1]: Interface version of OA applications 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4959, r4960		
Notice:	If there is no OA application, then it is not possible to access an index.		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		

r4959[0...n]	OA application GUID / OA GUID		
All objects	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: r4952 Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the GUIDs of the OA applications installed on the memory card/device memory. r4959[0...15]: GUID of OA application 1 r4960[16]: Major information of OA application 1 r4960[17]: Minor information of OA application 1 r4959[18...33]: GUID of OA application 2 r4960[34]: Major information of OA application 2 r4960[35]: Minor information of OA application 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4960		
Notice:	If there is no OA application, then it is not possible to access an index.		

r4960[0...n]	OA application GUID drive object / OA GUID DO		
All objects	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: r4952 Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the GUIDs of the drive object of the OA applications installed on the memory card/device memory. r4960[0...15]: GUID of this drive object of OA application 1 r4960[16]: Major information of this drive object of OA application 1 r4960[17]: Minor information of this drive object of OA application 1 r4960[18...33]: GUID of this drive object of OA application 2 r4960[34]: Major information of this drive object of OA application 2 r4960[35]: Minor information of this drive object of OA application 2, ...		
Dependency:	Refer to: r4950, r4951, r4952, r4955, p4956, r4957, r4958, r4959		
Notice:	If there is no OA application, then it is not possible to access an index.		

p4961[0...n]	OA application logbook module selection / OA logbook module		
All objects	Can be changed: T Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: r4950 Units group: - Scaling: - Max FFFF FFFF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 hex
Description:	Only for service purposes.		
r4975	OA application invalid number / OA inv no.		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of invalid OA applications installed on the memory card/device memory.		
Dependency:	Refer to: r4976, r4978, r4979		
Note:	OA: Open Architecture		
r4976	OA application invalid identifier, total length / OA inv ID length		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the total length of the IDs of all the invalid OA applications installed on the memory card/device memory.		
Dependency:	Refer to: r4975, r4978, r4979		
Note:	The identifier of an invalid OA application comprises a maximum of 8 characters plus separator.		
r4978[0...n]	OA application invalid identifier / OA inv ID		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned8 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: r4976 Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the IDs of all the invalid OA applications installed on the memory card/device memory. r4978[0...8]: Identifier of invalid OA application 1 r4978[9...17]: Identifier of invalid OA application 2, ...		
Dependency:	Refer to: r4975, r4976, r4979		
Notice:	If there is no invalid OA application, then it is not possible to access an index.		

r4979[0...n]	OA application invalid error code / OA inv error code		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned32 P-Group: OEM range Not for motor type: - Min -	Calculated: - Dynamic index: r4975 Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the error code of the invalid OA applications installed on the memory card/device memory. r4979[0]: Fault value of OA application 1 r4979[1]: Fault value of OA application 2, ...		
Dependency:	Refer to: r4975, r4976, r4978		
Notice:	If there is no invalid OA application, then it is not possible to access an index.		
Note:	The value in the error code must be interpreted in binary form. The bits have the following meaning: Bit 0: Incompatible OA interface version. Bit 1: OA application could not be loaded. Bit 2: Incorrect description files. Bit 3: OA application does not define a CPU type. Bit 4: OA application for this device not supported (incorrect CPU type). Bit 5: OA application for this device not supported (incorrect type ID). Bit 6: Incorrect description files (Const/Startup incompatible).		
p5401	BI: Line droop control activation / Line drp act		
A_INF (Line droop reg)	Can be changed: T Data type: Unsigned32 / Binary P-Group: Commands Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source to activate line droop control for the infeed. BI: p5401 = 1 signal: Activation of line droop control and deactivation of closed-loop DC-link voltage control/closed-loop current control. BI: p5401 = 0 signal: Activation of closed-loop DC-link voltage control/closed-loop current control and deactivation of line droop control.		
Dependency:	Refer to: r5402		
Notice:	Line droop control can only be activated if the power units have a gating unit with current limitation control (r0192.19 = 1).		
Note:	So that closed-loop DC-link voltage control is activated by the VECTOR drive object's technology controller (due to closed-loop DC-link voltage control for the infeed being deactivated) the following BICO interconnection must be set: BI: p3513 (VECTOR) = r5402.0 (A_INF)		

r5402.0...3 CO/BO: Line droop control status word / Line drp ZSW

A_INF (Line droop reg)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status word of line droop regulation for the infeed.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Line droop regulation not active	Yes	No	-
	01	Line droop regulation active	Yes	No	-
	02	Line droop regulation, stand-alone	Yes	No	-
	03	Line droop regulation current limitation active	Yes	No	-

p5403[0...1] CI: Line droop control current signal source / Line drp I s_src

	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	-	-	[0] 3467[0] [1] 3467[1]

Description: Sets the signal source for the current to be regulated in alpha/beta coordinates.

Index: [0] = Alpha
[1] = Beta

Dependency: Refer to: p5404

Note: The following BICO interconnections are recommended:

- Droop regulation for current/voltage at the line filter: BI: p5403 = r3467 (BI: p5404 = r3468 must be set)
- Droop regulation for current/voltage at the line transformer: BI: p5403 = r5497 (BI: p5404 = r5488 or r5498 must be set)

p5404[0...1] CI: Line droop control voltage signal source / Line drp U s_src

A_INF (Line droop reg)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	-	-	[0] 3468[0] [1] 3468[1]

Description: Sets the signal source for the voltage to be regulated in alpha/beta coordinates.

Index: [0] = Alpha
[1] = Beta

Note: The following BICO interconnections are recommended:

- Droop regulation for current/voltage at the line filter: BI: p5404 = r3468 (BI: p5403 = r3467 must be set)
- Droop regulation for current/voltage at the line transformer: BI: p5404 = r5488 or r5498 (BI: p5403 = r5497 must be set)

p5405	Line droop control frequency droop no-load frequency / Line drp f_no-ld		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 30.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 300.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the no-load frequency (as a % of p0211) for the line droop control active power frequency droop. Droop formula (without smoothing): $r5410 = (p5405 + p5406 + p5407 * r5411[0] / r0206) * p0211$		
Dependency:	Refer to: p5409		
Note:	The droop characteristic input variable is the active power r5411[0] at the selected connection point (p5403, p5404). The output frequency calculated using the above formula is filtered in accordance with the parameterized smoothing time (p5409). The smoothed output frequency is displayed in r5410.		
p5406	Cl: Line droop control frequency droop supplementary setpoint / L drp f_suppl_setp		
A_INF (Line droop reg)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the frequency droop supplementary setpoint (as a % of p0211).		
Dependency:	Refer to: p5405		
p5407	Line droop control frequency droop gradient / Line drp f_grad		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -100.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 5.00 [%]
Description:	Sets the frequency droop gradient (as a % of p0211).		
Dependency:	Refer to: p5405		
p5409	Line droop control frequency droop smoothing time / Line drp f_t_sm		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 150.00 [ms]
Description:	Sets the smoothing time for the output frequency of the active power frequency droop (r5410).		
Dependency:	Refer to: p5405		
Note:	When the load changes, mechanical energy generation units induce a delayed change in frequency on account of their inertia. The converter tries to emulate this response with the assistance of the smoothing time. For the line to remain stable, all the energy generation units in a separate network have to respond in a similar manner during operation.		

r5410	Line droop control frequency droop output / Line drp f outp		
A_INF (Line droop reg)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Hz]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [Hz]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Hz]
Description:	Displays the smoothed output frequency of the active power frequency droop. Droop formula (without smoothing): $r5410 = (p5405 + p5406 + p5407 * r5411[0] / r0206) * p0211$		
Dependency:	Refer to: p5405		
r5411[0...1]	Line droop control frequency droop active power / Line drp f P_act		
A_INF (Line droop reg)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [kW]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [kW]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [kW]
Description:	Displays the input active power of the active power frequency droop. The active power is calculated for the currents and voltages defined with connector inputs p5403 and p5404.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p5409		
Note:	The value is smoothed by a PT1 filter (p5409).		
r5412	Line droop control line angle / Line drp angle		
A_INF (Line droop reg)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [°]	Calculated: - Dynamic index: - Units group: - Scaling: p2005 Max - [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [°]
Description:	Displays the current line angle for line droop control. The value is calculated by integrating the output frequency of the active power frequency droop (r5410).		
p5415	Line droop control voltage droop no-load voltage / Line drp U_no-ld		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 30.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 300.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the no-load voltage (as a % of p0210) for the reactive current voltage droop for line droop control. Droop formula (without smoothing): $p5420 = (p5415 + p5416 + p5417 * r5421[0] / r0207) * p0210$		
Dependency:	Refer to: p5419		
Note:	The droop characteristic input variable is the reactive power r5421[0] at the selected connection point (p5403, p5404). The output voltage calculated using the above formula is filtered in accordance with the parameterized smoothing time p5419. The smoothed output voltage is displayed in r5420.		

p5416	CI: Line droop control voltage droop supplementary setpoint / L drp U_suppl_setp		
A_INF (Line droop reg)	Can be changed: U, T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the signal source for the voltage droop supplementary setpoint (as a % of p0210).		
Dependency:	Refer to: p5415		
p5417	Line droop control voltage droop gradient / Line drp U grad		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -100.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 5.00 [%]
Description:	Sets the voltage droop gradient (as a % of p0210).		
Dependency:	Refer to: p5415		
p5419	Line droop control voltage droop smoothing time / Line drp U t_sm		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 150.00 [ms]
Description:	Sets the smoothing time for the reactive current actual value (r5421[1]). The smoothed reactive current is the input quantity for the reactive current voltage droop.		
Dependency:	Refer to: p5415		
Note:	When the load changes, mechanical energy generation units induce a delayed change in voltage on account of their electrical properties. The converter tries to emulate this response with the assistance of the smoothing time. For the line to remain stable, all the energy generation units in a separate network have to respond in a similar manner during operation.		
r5420	Line droop control voltage droop output / Line drp U outp		
A_INF (Line droop reg)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Vrms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [Vrms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the smoothed output voltage of the reactive current voltage droop. Droop formula (without smoothing): $p5420 = p5415 + p5416 + p5417 * r5421[0] / r0207 * p0210$		
Dependency:	Refer to: p5415		

r5421[0...1]	Line droop control voltage droop reactive current / Line drp U I_reac		
A_INF (Line droop reg)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [A]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [A]
Description:	Displays the input reactive current of the reactive current voltage droop. The reactive current is calculated for the currents and voltages defined with connector inputs p5403 and p5404.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p5419		
Note:	The value is smoothed by a PT1 filter (p5419).		
r5422[0...1]	Line droop control voltage droop reactive power / Line drp U Q_reac		
A_INF (Line droop reg)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [kvar]	Calculated: - Dynamic index: - Units group: 14_12 Scaling: - Max - [kvar]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [kvar]
Description:	Displays the input reactive power of the reactive current voltage droop. The reactive power is calculated for the currents and voltages defined with connector inputs p5403 and p5404.		
Index:	[0] = Unsmoothed [1] = Smoothed		
Dependency:	Refer to: p5419		
Note:	The value is smoothed by a PT1 filter (p5419).		
p5423	Line droop control supplementary inductance / Line drp L_suppl		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min -10.000 [mH]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10.000 [mH]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [mH]
Description:	Sets an imaginary supplementary inductance for the infeed. The supplementary inductance supplements the effect of the voltage droop, in particular for transient operations.		
Dependency:	Refer to: p5424		
Warning:	Unsuitable supplementary inductance and smoothing time settings will make line droop regulation unstable.		
			
Note:	The supplementary inductance is deactivated with p5523 = 0. The converter's output voltage is calculated so that the converter behaves like a supplementary inductance and as such achieves an effect similar to a line reactor with higher/lower inductance. The supplementary inductance can be used for damping in the event of resonance phenomena on the line.		

p5424	Line droop control supplementary inductance smoothing time / L drp L_suppl t_sm		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [ms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.40 [ms]
Description:	Sets the smoothing time for the effect of the supplementary inductance (p5423).		
Dependency:	Refer to: p5423		
Note:	The supplementary inductance causes current change to be fed back to the converter's output voltage.		
p5425[0...1]	CI: Line droop control voltage control signal source / L drp U_ctrl s_sc		
A_INF (Line droop reg)	Can be changed: T Data type: Unsigned32 / FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: p2001 Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 3468[0] [1] 3468[1]
Description:	Sets the signal source for the voltage to be regulated at the connection point in alpha/beta coordinates.		
Index:	[0] = Alpha [1] = Beta		
Dependency:	Refer to: p5427		
Note:	The following BICO interconnections are recommended: - Compensation of the internal voltage drop for connection point at line filter: BI: p5425 = r3468 - Compensation of the internal voltage drop for connection point at line transformer: BI: p5425 = r5488 or r5498		
p5426	Line droop control voltage control P gain / Line drp U_ctrl Kp		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.000 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.000 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.000 [%]
Description:	Sets the proportional gain for the controller for voltage control at the connection point. The controller compensates internal voltage drops under load conditions and as such precisely converts the droop characteristic at the connection point (defined in p5425).		
Dependency:	Refer to: p5427		
Note:	The proportional component of the controller is deactivated with p5426 = 0.		
p5427	Line droop control voltage control integration time / Line drp U_ctrl Ti		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.000 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10000.000 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 500.000 [ms]
Description:	Sets the integration time for the controller for voltage control at the connection point. The controller compensates internal voltage drops under load conditions and as such precisely converts the droop characteristic at the connection point (defined in p5425).		
Dependency:	Refer to: p5426		
Note:	The integral component of the controller is deactivated with p5427 = 0.		

p5428[0...3]	Line droop control voltage control short circuit / Line drp U_ctrl sh		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 20.00 [%] [1] 0.00 [%] [2] 90.00 [%] [3] 2.00 [%]
Description:	Sets the parameters for rapid pre-control of the output voltage in the event of a voltage dip. The values relate to the voltage setpoint from the voltage droop (r5420). The voltage output by the converter is formed from the product of the voltage setpoint and the adaptation factor, which is calculated in rapid pre-control.		
Index:	[0] = Adaptation factor lower limit [1] = Adaptation factor increment current limit [2] = Adaptation factor increment voltage difference [3] = Adaptation factor increment increase		
Dependency:	Refer to: r5452		
Note:	Rapid adaptation of the voltage setpoint to a reduced line voltage (e.g. in the event of a line short circuit) reduces the number of additional switching operations completed by the lower-level rapid current hysteresis controller. Re index 0: Minimum value for the adaptation factor, must be complied with for the calculation of the reduced output voltage. The value is dependent upon the voltage drop at the line reactor when the current limit is reached. As such, the value results from the reactor inductance, the frequency, and the current limit. A value of 100% deactivates the function. Re index 1: When the current limit is reached, the adaptation factor is weighted with this factor in each sampling cycle. A value of 0 means that the adaptation factor will jump to the minimum value (p5428[0]) if the current limit is reached. A value of 100% deactivates the function. Re index 2: If the voltage across the line reactor exceeds the minimum value (p5428[0]) for at least 2 current controller clock cycles, the adaptation factor will be weighted with this factor (p5428[2]) in every sampling cycle. Re index 3: If none of the above criteria for reducing the adaptation factor is met, the adaptation factor is increased by the percentage value p5428[3] in each current controller clock cycle (the increase is additive). If the adaptation factor reaches the maximum value of 100%, the effect of pre-control by means of multiplication by the droop setpoint r5420 is cancelled out.		
r5429	Line droop control voltage control output / L drp U_ctrl outp		
A_INF (Line droop reg)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [Vrms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [Vrms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [Vrms]
Description:	Displays the controller output for voltage control at the connection point.		
Dependency:	Refer to: p5426, p5427

Dependency:	Refer to: p5457, p5458, p5459 Refer to: F06850																									

p5453[0...5]	Current hysteresis controller overcurrent limit / I_hyst_ctrl I lim		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 50.000 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 140.000 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting [0] 85.000 [%] [1] 85.000 [%] [2] 85.000 [%] [3] 85.000 [%] [4] 85.000 [%] [5] 115.000 [%]
Description:	Sets the permissible maximum current in the event of an overload and short circuit for the modulator to intervene and apply limiting. The effective current limits are calculated from the parameterized overcurrent (p5453) and the hysteresis width (p5454).		
Index:	[0] = No-load operation (p5451 = 1 signal) [1] = Normal operation (p5451 = 1 signal) [2] = Short-circuit operation (p5451 = 1 signal) [3] = No-load operation (p5451 = 0 signal) [4] = Normal operation (p5451 = 0 signal) [5] = Short-circuit operation (p5451 = 0 signal)		
Dependency:	The overcurrent limit (p5453) cannot be set less than or equal to the hysteresis width (p5454). Refer to: p5454, p5455		
Note:	The value refers to r0209.		
p5454[0...5]	Current hysteresis controller overcurrent hysteresis width / I_hyst_ctrl I hyst		
A_INF (Line droop reg)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min 15.000 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 50.000 [%]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20.000 [%]
Description:	Sets the permissible current hysteresis in the event of an overload and short circuit for the modulator to intervene and apply limiting. The effective current limits are calculated from the parameterized overcurrent (p5453) and the hysteresis width (p5454).		
Index:	[0] = No-load operation (p5451 = 1 signal) [1] = Normal operation (p5451 = 1 signal) [2] = Short-circuit operation (p5451 = 1 signal) [3] = No-load operation (p5451 = 0 signal) [4] = Normal operation (p5451 = 0 signal) [5] = Short-circuit operation (p5451 = 0 signal)		
Dependency:	The hysteresis width (p5454) cannot be set greater than or equal to the overcurrent limit (p5453). Refer to: p5453		
Note:	The value refers to r0209.		

p5455[0...5]		Current hysteresis controller overcurrent tolerance range / I_hyst_ctrl I tol	
A_INF (Line droop reg)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 10.000 [%]	Max 100.000 [%]	Factory setting 20.000 [%]
Description:	Sets the permissible tolerance range in the event of an overload and short circuit for the modulator to intervene and apply limiting. The effective current limit is calculated from the overcurrent limit (p5453) plus the overcurrent tolerance range (p5455).		
Index:	[0] = No-load operation (p5451 = 1 signal) [1] = Normal operation (p5451 = 1 signal) [2] = Short-circuit operation (p5451 = 1 signal) [3] = No-load operation (p5451 = 0 signal) [4] = Normal operation (p5451 = 0 signal) [5] = Short-circuit operation (p5451 = 0 signal)		
Dependency:	Refer to: p5453		
Note:	The value refers to r0209.		

p5456[0...2]		Current hysteresis controller configuration / I_hyst_ctrl config				
A_INF (Line droop reg)	Can be changed:	U, T	Calculated:	-	Access level:	4
	Data type:	Unsigned16	Dynamic index:	-	Func. diagram:	-
	P-Group:	Modulation	Units group:	-	Unit selection:	-
	Not for motor type:	-	Scaling:	-	Expert list:	1
	Min	-	Max	-	Factory setting	[0] 1000 0000 0010 0000 bin [1] 1000 0000 0010 0000 bin [2] 1000 0000 0011 0000 bin
Description:		Sets the configuration for the current hysteresis controller.				
Index:		[0] = No-load [1] = Normal operation [2] = Sh-cct operation				
Bit field:	Bit	Signal name	1 signal	0 signal	FP	
	04	Disable wobulation amplitude	Yes	No	-	
	05	Activate extended current limitation control	Yes	No	-	
	06	Activate isochronous current limitation	Yes	No	-	
	15	Activate flat-top modulation	Yes	No	-	
Notice:		Re bit 04 = 0: The pulse frequency wobulation amplitude (p1811) is enabled. Only applies if p1810.2 = 1. Re bit 04 = 1: The pulse frequency wobulation amplitude (p1811) is disabled. Only applies if p1810.2 = 1.				

p5457[0...2] Current hysteresis controller pulse frequency changeover / I_hyst_ctrl f_puls

A_INF (Line droop reg)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 50.000 [%]	Max 200.000 [%]	Factory setting [0] 200.000 [%] [1] 100.000 [%] [2] 100.000 [%]

Description: Sets the pulse frequency for the operating states of the current hysteresis controller.

Index:
[0] = No-load
[1] = Normal operation
[2] = Sh-cct operation

Note:
The value refers to p1800.
Only factors of the pulse frequency in p1800 are permitted.

p5458[0...1] Current hysteresis controller minimum time operating state / I_hyst_ctrl t mode

A_INF (Line droop reg)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [s]	Max 10.000 [s]	Factory setting [0] 1.000 [s] [1] 1.250 [s]

Description: Sets the minimum times for the operating states of the current hysteresis controller.

Index:
[0] = Normal operation
[1] = Sh-cct operation

Dependency: Refer to: F06850

Note:
Re p5458[0]:
Minimum time for operating state "Rated operation" for change to "No-load operation".
Re p5458[1]:
Permissible short-circuit duration. If the short circuit is not cleared within this time, the main generator will shut down with fault F06850.

p5459[0...3] Current hysteresis controller sequence control state change / I_hyst_ctrl seq

A_INF (Line droop reg)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [%]	Max 200.000 [%]	Factory setting [0] 10.000 [%] [1] 5.000 [%] [2] 70.000 [%] [3] 75.000 [%]

Description: Sets the limits for state change in the context of sequence control on the current hysteresis controller.

Index:
[0] = Lower current limit no-load/normal operation
[1] = Upper current limit normal/no-load operation
[2] = Lower voltage limit short-circuit operation
[3] = Upper voltage limit short-circuit/normal operation

Dependency: Refer to: r5452

Note:
The current value refers to r0209.
The voltage value refers to p0210.

p5460 VSM2 input line supply voltage, voltage scaler / VSM2 inp U_scaler					
A_INF (Line transf)	Can be changed: T Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min 0.00 [%]		Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 100000.00 [%]		Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [%]
Description:	Sets a voltage scaler for Voltage Sensing Module 2 (VSM2).				
Note:	When the 690 V input is used (X522) without voltage scaler, 0 % should be entered. When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered. Example: 1000 V line supply voltage, voltage scaling, 10:1 --> voltage at the VSM input is 100 V --> p5460 = 10 * 100 % = 1000 %				
r5461[0...n] CO: VSM2 input line supply voltage u1 - u2 / VSM2 inp u1-u2					
A_INF (Line transf)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [V]		Calculated: - Dynamic index: p0150 Units group: 5_3 Scaling: p2001 Max - [V]		Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Displays the voltage between phases L1 and L2.				
Note:	X521.1 or X522.1: Connection of L1 X521.2 or X522.2: Connection of L2				
r5462[0...n] CO: VSM2 input line supply voltage u2 - u3 / VSM2 inp u2-u3					
A_INF (Line transf)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [V]		Calculated: - Dynamic index: p0150 Units group: 5_3 Scaling: p2001 Max - [V]		Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [V]
Description:	Displays the voltage between phases L2 and L3.				
Note:	X521.2 or X522.2: Connection of L2 X521.3 or X522.3: Connection of L3				
r5464[0...n] CO: VSM2 temperature evaluation status / VSM2 temp status					
A_INF (Line transf)	Can be changed: - Data type: Unsigned16 P-Group: Terminals Not for motor type: - Min -		Calculated: - Dynamic index: p0150 Units group: - Scaling: - Max -		Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the status of the temperature evaluation of Voltage Sensing Module 2 (VSM2). This displays whether the temperature actual value has exceeded the fault/alarm threshold.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Temperature alarm threshold exceeded	Yes	No	-
	01	Temperature fault threshold exceeded	Yes	No	-

p5465[0...n]	VSM2 temperature evaluation sensor type / VSM2 temp sens_typ

Description:	Sets the temperature sensor for Voltage Sensing Module 2 (VSM2). The temperature sensor is connected to terminals X520.5 and X520.6 on the VSM2.		
Value:	0: No sensor 1: PTC 2: KTY84		
r5466[0...n]	CO: VSM2 temperature KTY / VSM2 temp KTY		
A_INF (Line transf)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [°C]	Calculated: - Dynamic index: p0150 Units group: 21_1 Scaling: TEMP Max - [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [°C]
Description:	Displays the temperature actual value of a KTY84 temperature sensor connected to Voltage Sensing Module 2 (VSM2). Prerequisite: A KTY84 sensor is connected and p5465 = 2 is set.		
Dependency:	Refer to: p5465		
Note:	For sensor type PTC (p5465 = 1), the following applies: - Below the nominal response temperature, r5466 = -50 °C. - Above the nominal response temperature, r5466 = 199.9 °C.		
p5467[0...n]	VSM2 overtemperature alarm threshold / VSM2 temp A_thresh		
A_INF (Line transf)	Can be changed: T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.00 [°C]	Calculated: - Dynamic index: p0150 Units group: 21_1 Scaling: TEMP Max 301.00 [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 150.00 [°C]
Description:	Sets the alarm threshold for the KTY temperature sensor on Voltage Sensing Module 2 (VSM2). Prerequisite: A KTY84 sensor is connected and p5465 = 2 is set.		
Dependency:	Refer to: p5465 Refer to: A34211		
p5468[0...n]	VSM2 overtemperature shutdown threshold / VSM2 temp F_thresh		
A_INF (Line transf)	Can be changed: T Data type: FloatingPoint32 P-Group: - Not for motor type: - Min 0.00 [°C]	Calculated: - Dynamic index: p0150 Units group: 21_1 Scaling: TEMP Max 301.00 [°C]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting 180.00 [°C]
Description:	Sets the shutdown threshold for the KTY temperature sensor of the VSM2 to monitor a temperature.		
Dependency:	Refer to: p5467 Refer to: F34207		

p5469[0...n] VSM2 overtemperature hysteresis / VSM2 temp hyst

A_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: p0150	Func. diagram: -
	P-Group: -	Units group: 21_2	Unit selection: p0505
	Not for motor type: -	Scaling: TEMP	Expert list: 1
	Min 1.00 [K]	Max 50.00 [K]	Factory setting 3.00 [K]
Description:	Sets the hysteresis for the warning threshold of the VSM2 to monitor a temperature.		
Dependency:	Refer to: p5467		

p5470[0...n] VSM2 10 V input CT gain / VSM2 CT_gain

A_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: p0150	Func. diagram: -
	P-Group: Closed-loop control	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min 0.000 [A]	Max 1000.000 [A]	Factory setting 1.000 [A]
Description:	Sets the CT gain of the CT connected at the 10 V input of Voltage Sensing Module 2 (VSM2). The parameter specifies the current magnitude in [A] referred to the input voltage at VSM2 in [V]. Example: CT with 1 V per 200 A. --> p5470 = 200		
Note:	The CT for phase 1 is connected at terminals X520.1 and X520.2 of VSM2. The CT for phase 2 is connected at terminals X520.3 and X520.4 of VSM2.		

r5471[0...n] CO: VSM2 10 V input CT 1 actual value / VSM2 CT1 I_act

Note:	10 V input 2: Terminals X520.3 and X520.4		

p5480 Transformer magnetization mode / Transf mag mode

A_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	102	0
Description:	Sets the mode for transformer magnetization. 11: Identification 1 for transformer data Automatic determination of the magnetizing inductance. The magnetizing inductance determined in r5491 must be transferred to p5492 in order to take effect. Transformer identification 1 requires the "Line droop control" function module to be activated. 12: Identification 2 for transformer data Automatic determination of the transformer phase shift and the gain correction. The transformer phase shift determined in r6440 must be transferred to p6420 in order to take effect. The gain correction determined in r6441 must be transferred to p6421 in order to take effect. 13: Identification 3 for transformer data Determination of the total leakage inductance of the transformer during line data identification. p3410 = 1 is set automatically and the inductance is measured on the next power-up. Once the measurement has been taken the converter shuts down automatically and p3410 is reset (p3410 = 0). The total leakage inductance of the transformer determined in r5489 must be transferred to p5490 in order to take effect. 101: Test operation 1 The infeed switches to line droop control, but the main switch/circuit breaker does not close. Test operation requires the "Line droop control" function module to be activated. 102: Test operation 2 As test operation 1, but without synchronization with the line (VSM2 measured data r5460 and following is not used); instead, the output voltage is generated corresponding to the rated data p0210, p0211, p5486.		

Value:	0:	Deactivated
	1:	Normal operation 1
	11:	Identification of the transformer magnetizing inductance
	12:	Identification of transformer phase shift and gain correction
	13:	Identification of the total transformer leakage inductance
	101:	Test operation 1 (without activation of circuit breaker)
	102:	Test oper. 2 (w/o activation of circuit breaker, without VSM2)

Note: Re value = 13:
On low-power systems it is advisable to reduce the excitation current p3415 for inductance identification (e.g. p3415[0] = p3415[1] = 5%).
To repeat a measurement p5480 must first be set to 1 and then reset to a value of 13 once the measurement has been taken.

p5481[0...2] Transformer magnetization ramp-up time/bounce time/timeout / Transf mag t_r-up

A_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -

p5500**Dynamic grid control configuration / Dyn grid config**

A_INF (Dyn. line support)

Can be changed: T**Calculated:** -**Access level:** 4**Data type:** Unsigned16**Dynamic index:** -**Func. diagram:** -**P-Group:** Closed-loop control**Units group:** -**Unit selection:** -**Not for motor type:** -**Scaling:** -**Expert list:** 1**Min****Max****Factory setting**
0000 bin**Description:**

Sets the configuration for dynamic grid control.

Bit field:

Bit	Signal name	1 signal	0 signal	FP
00	Deactivate characteristic	Yes	No	-
01	Line voltage alpha/beta amplitudes	No	Yes	-
02	Grid control mode in the event of asymmetry	No	Yes	-

Dependency:

Refer to: p5507, r5510

Note:

Re bit 00:

If p5500.0 = 0 the output value of the grid control characteristic is added to the control's reactive current setpoint.
 $r0075 = p3610 + p3611 + r3471 + r5510[0]$.

If p5500.0 = 1 the dynamic reactive current setpoint p3611 is subtracted if dynamic grid control is active (p5502.1 = 1). In this case, the following applies:

 $r0075 = p3610 + r3471 + r5510[0]$.

Re bit 01:

If p5500.1 = 0 the alpha and beta amplitudes of the line voltage, which were smoothed with p5507[2], are determined. An estimated value for the current line voltage absolute value is calculated from these amplitudes and serves as the input value for the grid control characteristic.

In the event of asymmetrical line disturbance, this means that the reactive current setpoint (r5510) can be kept constant.

If p5500.1 = 1, the smoothed absolute value of the measured line voltage is used as the input value for the grid control characteristic. Smoothing is set with p5507[3].

Re bit 02:

Only effective if p5500.1 = 0.

If p5500.2 = 0, the maximum value from the alpha and beta line voltage amplitudes is used as the input value for the grid control characteristic. The reactive current setpoint (r5510) will, therefore, remain virtually constant even in the event of asymmetrical line disturbance. Power fluctuations in the DC link are reduced.

If p5500.2 = 1, the mean value from the alpha and beta line voltage amplitudes is used as the input value for the grid control characteristic. However, the resulting higher reactive current setpoint (r5510) for grid control will cause significant power fluctuations in the DC link in the event of asymmetrical line disturbance.

p5501 BI: Dynamic grid control activation / Dyn grid act

A_INF (Dyn. line sup- port)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: -
	P-Group: Commands	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to activate dynamic grid control.

BI: p5501 = 1 signal:

Activates dynamic grid control.

BI: p5501 = 0 signal:

Deactivates dynamic grid control.

Notice: Dynamic grid control can only be activated if the power units have a gating unit with current limitation control (r0192.19 = 1).

Note: If grid control is deactivated:
Line disturbance will generate the standard response to phase failures on the part of the infeed for drive applications (see A06205).

If grid control is activated:

Line disturbance will trigger grid control in accordance with the set characteristic (p5505, p5506).

r5502.0...1 CO/BO: Dynamic grid control status word / Dyn grid ZSW

A_INF (Dyn. line sup- port)	Can be changed: -	Calculated: -	Access level: 3

Description:	Sets the reactive current setpoints for the characteristic for dynamic grid control. For more information, see p5505.		
Index:	[0] = Characteristic positive starting point [1] = Characteristic positive finishing point [2] = Characteristic negative starting point [3] = Characteristic negative finishing point		
Dependency:	Refer to: p5505		
Note:	The values refer to p0209.		

p5507[0...3] Dynamic grid control times / Dyn grid timesA_INF (Dyn. line sup-
port)**Can be changed:** U, T**Data type:** FloatingPoint32**P-Group:** Closed-loop control**Not for motor type:** -**Min**

0.00 [ms]

Calculated: -**Dynamic index:** -**Units group:** -**Scaling:** -**Max**

10000.00 [ms]

Access level: 3**Func. diagram:** 7997**Unit selection:** -**Expert list:** 1**Factory setting**

[0] 500.00 [ms]

[1] 2.00 [ms]

[2] 20.00 [ms]

[3] 4.00 [ms]

Description: Sets the time values for dynamic grid control.**Index:**
[0] = Minimum time dynamic grid control
[1] = Minimum time line disturbance
[2] = Smoothing time alpha/beta
[3] = Smoothing time instantaneous value**Dependency:** Refer to: p5500**Note:** Re index 0:

Minimum time for continuing grid control in accordance with the characteristic once the line voltage has returned to the permissible tolerance range between the two starting points (p5505[0], p5505[2]).

Re index 1:

Minimum time for line disturbance for the start of grid control in accordance with the characteristic.

If the tolerance band between the two characteristic starting points is violated for at least this period of time, voltage control in accordance with characteristic will start up.

Re index 2:

Smoothing time for the calculation of the alpha amplitude and the beta amplitude of the line voltage if p5500.1 = 0.

An estimated value for the current line voltage absolute value is calculated from the alpha and beta amplitudes and serves as the input value for the grid control characteristic.

A smoothing time of less than a line period makes no sense.

If the estimated absolute value deviates from the smoothed measured voltage absolute value by more than 25%, the smoothed measured value is used. This corresponds to a temporary automatic switchover from p5500.1 = 0 to p5500.1 = 1.

Re index 3:

Smoothing time for the measured absolute value of the line voltage if p5500.1 = 1.

The smoothed absolute value of the line voltage is used as the input value for the grid control characteristic.

Setting p5507[3] = 0 deactivates smoothing.

p5508 Dynamic grid control Vdc threshold / Dyn grid Vdc thrA_INF (Dyn. line sup-
port)**Can be changed:** U, T**Data type:** FloatingPoint32**P-Group:** Converter**Not for motor type:** -**Min**

-200 [V]

Calculated: -**Dynamic index:** -**Units group:** -**Scaling:** -**Max**

0 [V]

Access level: 3**Func. diagram:** -**Unit selection:** -**Expert list:** 1**Factory setting**

-50 [V]

Description: Sets the threshold for the DC-link voltage (Vdc) to reduce the reactive current setpoint from dynamic grid control.
The value represents an offset in relation to the DC-link maximum voltage, with the result that the intervention threshold is obtained from the total of r0297 and p5508.**Dependency:** Refer to: r0297**Note:** To avoid imminent shutdown due to a DC-link overvoltage, the reactive current setpoint is reduced for dynamic grid control. Instead of this, the available converter current is used as the active current to reduce the DC-link voltage.

p5509[0...5] Dynamic grid control scaling values / Dyn grid scalA_INF (Dyn. line sup-
port)**Can be changed:** U, T**Data type:** FloatingPoint32**P-Group:** Closed-loop control**Not for motor type:** -**Min**

0.10 [%]

Calculated: -**Dynamic index:** -**Units group:** -**Scaling:** -**Max**

200.00 [%]

Access level: 3**Func. diagram:** 7997**Unit selection:** -**Expert list:** 1**Factory setting**

[0] 40.00 [%]

[1] 40.00 [%]

[2] 4.00 [%]

[3] 1.00 [%]

[4] 100.00 [%]

[5] 100.00 [%]

Description:

Sets the scaling values for dynamic grid control.

Index:

[0] = Ramp reactive current at the beginning/end of grid control

[1] = Ramp reactive current when Vdc threshold is overshoot

[2] = Ramp reactive current when Vdc threshold is undershoot

[3] = Hysteresis line voltage to exit grid control

[4] = Reference voltage scaling

[5] = Current limitation scaling

Dependency:

Refer to: p5505, p5506, p5508

Note:

Re index 0:

Change in the reactive current setpoint (% per ms) at the beginning and end of dynamic grid control.

This avoids sudden changes in the reactive current if the starting points for the line voltage (p5505[0], p5505[2]) are overshoot.

Re index 1:

Change in the reactive current setpoint (% per ms) when the maximum Vdc threshold (p5508) is overshoot.

To avoid beat phenomena, the following must apply: p5509[1] > p5509[2].

Re index 2:

Change in the reactive current setpoint (% per ms) when the maximum Vdc threshold (p5508) is undershoot.

To avoid beat phenomena, the following must apply: p5509[1] > p5509[2].

Re index 3:

Sets the hysteresis for the line voltage to exit grid control (as a percentage of the supply voltage p0210).

To exit grid control, the line voltage must be in the interval reduced by the hysteresis width (the interval is defined with the starting points p5505[0] and p5505[2] and the hysteresis width p5509[3]).

Re index 4:

Sets the scaling factor for the reference voltage for dynamic grid control (as a percentage of the supply voltage p0210).

As a result, the product of p0210 * p5509[4] is applied as the voltage zero.

Re index 5:

Sets the scaling factor for the permissible maximum converter current absolute value for dynamic grid control (as a percentage of the converter maximum current r0209).

Values higher than 100% will not be applied.

Note:	The alpha and beta amplitudes calculated are used to calculate grid control dependent upon the selected configuration (p5500.1).		
r5512[0...1]	CO: Dynamic grid control line voltage absolute value / Dyn grid abs val		
A_INF (Dyn. line sup-port)	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [V]	Calculated: - Dynamic index: - Units group: - Scaling: p2001 Max - [V]	Access level: 3 Func. diagram: 7997 Unit selection: - Expert list: 1 Factory setting - [V]
Description:	Display and connector output for the voltage absolute value calculated from the alpha/beta input voltages (p5504).		
Index:	[0] = Line voltage absolute value input characteristic [1] = Line voltage absolute value smoothed		
Dependency:	Refer to: p5505, p5506		

Note: Re index 0:
Displays the effective voltage absolute value for the input of the characteristic for dynamic grid control.
Re index 1:
Displays the voltage absolute value following smoothing of the actual value according to p5507[3].
If p5500.1 = 1, this value is used as the input value for the characteristic.
If p5500.1 = 0, the alpha/beta amplitudes are used to calculate the voltage absolute value (r5511).

p6420 Line transformer phase shift / Transf ph shift

A_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-180.00 [°]	179.90 [°]	0.00 [°]

Description: Sets the phase shift between the line transformer's primary and secondary voltages.

Note: The phase shift relates to the primary side of the transformer, which is connected to the line. The secondary side is connected to the infeed. Example: A Dy5n transformer has a phase shift of $-5 \times 30^\circ = -150^\circ$. This means that the secondary voltage is shifted from the primary voltage by -150° (the primary voltage is 150° ahead).
This phase shift must be determined when commissioning the system.

p6421 Line transformer gain adaptation / Transf gain

A_INF (Line transf)	Can be changed: T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Converter	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	50.000 [%]	200.000 [%]	100.000 [%]

Description: Sets the gain factor correction for fine calibration of the line transformer transformation ratio.

Dependency: Refer to: r6441

r6440 Line transformer phase shift identified / Trans phase ident

A_INF (Line transf)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [°]	- [°]	- [°]

Description: Displays the phase shift between the primary and secondary voltages of the line transformer identified by automatic transformer identification (p5480 = 12).

Dependency: Refer to: p5480, p6420

Note: The phase shift relates to the primary side of the transformer, which is connected to the line. The secondary side is connected to the infeed.

Example:

A Dy5n transformer has a phase shift of $-5 \times 30^\circ = -150^\circ$. This means that the secondary voltage is shifted from the primary voltage by -150° (the primary voltage is 150° ahead).

The result should be entered in parameter p6420. During identification, the value previously entered in p6420 is not effective.

r6441	Line transformer gain adaptation identified / Transf gain ident		
A_INF (Line transf)	Can be changed: - Data type: FloatingPoint32 P-Group: Closed-loop control Not for motor type: - Min - [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [%]	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the gain factor correction identified (p5480 = 12) for fine calibration of the line transformer transformation ratio.		
Dependency:	Refer to: p6421		
Note:	The result should be entered in parameter p6421. During identification, the value previously entered in p6421 is not effective.		

r7000	Par_circuit No. of active power units / Qty active PU		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: Unsigned16 P-Group: Modulation Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the active power units for a parallel circuit configuration.		
Dependency:	Refer to: p7001		

p7001[0...n]	Par_circuit power units enable / PU enable		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: T Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: - Dynamic index: PDS, p0120 Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Enables the power units in the parallel circuit configuration.		
Value:	0: Deactivated 1: Activated		
Dependency:	Refer to: r7000		
Note:	For motors with separate winding systems (p7003 = 1) it is not possible to inhibit an individual power unit. p7001 is automatically reset if a power unit is deactivated via p0125 or p0895.		

r7002[0...n]	Par_circuit status power units / Status PU		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: Integer16 P-Group: Modulation Not for motor type: - Min 0	Calculated: - Dynamic index: PDS, p0120 Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the status of the power units in the parallel circuit configuration.		
Value:	0: Pulses inhibited 1: Pulses enabled		
Dependency:	Refer to: r7000, p7001		

p7003	Par_circuit winding system / Winding system		
VECTOR (Parallel)	Can be changed: C2(2) Data type: Integer16 P-Group: Converter Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Specifies the winding system for a parallel circuit configuration. The following limitations/restrictions are obtained depending on the setting: One winding system (p7003 = 0): - the motor data identification routine (p1910) determines the stator resistance and the cable resistance. The cable resistance of an individual Motor Module is entered into p0352. - the current symmetrizing is activated as standard after the motor data identification routine (p7035 = 1). - individual Motor Modules can be activated and deactivated (p7001). - the edge modulation is not possible (p1802). Several separate winding systems or motors (p7003 = 1): - the motor data identification routine (p1910) determines the total (overall) resistance. The cable resistance is not measured, but instead, entered as a component of the total resistance (refer to p0352). - all Motor Modules are activated. It is not possible to deactivate a motor model. - the edge modulation can be activated (p1802).		
Value:	0: One winding system 1: Several separate winding systems or motors		
Dependency:	Refer to: p1802		
p7010	Par_circuit current dissymmetry alarm threshold / i_dissym A thresh		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 2 [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 100 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20 [%]
Description:	Sets the alarm threshold to detect current dissymmetry in the parallel circuit configuration. The deviation between the measured values and average value is evaluated. The specified value is referred to the rated power unit current (p7251[0]).		
Dependency:	Refer to: r7251 Refer to: A05052		
p7011	Par_circuit DC link voltage dissymmetry alarm threshold / Vdc_dissym A thrsh		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: U, T Data type: FloatingPoint32 P-Group: Modulation Not for motor type: - Min 2 [%]	Calculated: - Dynamic index: - Units group: - Scaling: PERCENT Max 100 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10 [%]
Description:	Sets the alarm threshold to detect dissymmetry of the DC link voltages in the parallel circuit configuration. The deviation between the measured values and average value is evaluated. The specified value is referred to the rated link voltage.		
Dependency:	Refer to: A05053		

r7020[0...n]	CO: Par_circuit deviation current in phase U / Phase U curr dev		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: PDS, p0120 Units group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the deviation between the measured current actual value of phase U and the average value as peak value. The maximum deviation from the average value is displayed in r7025.		
Dependency:	Refer to: r7021, r7022, r7025		
r7021[0...n]	CO: Par_circuit deviation current in phase V / Phase V curr dev		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: PDS, p0120 Units group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the deviation between the measured current actual value of phase V and the average value as peak value. The maximum deviation from the average value is displayed in r7026.		
Dependency:	Refer to: r7020, r7022, r7026		
r7022[0...n]	CO: Par_circuit deviation current in phase W / Phase W curr dev		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: PDS, p0120 Units group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the deviation between the measured current actual value of phase W and the average value as peak value. The maximum deviation from the average value is displayed in r7027.		
Dependency:	Refer to: r7020, r7021, r7027		
r7025	CO: Par_circuit max. deviation currents phase U / Phase U Max i_dev		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: - Units group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the maximum absolute deviation of the measured current actual values of phase U from the average value as peak value. The deviation of the individual currents from the average value is displayed in r7020.		
Dependency:	Refer to: r7020, r7026, r7027 Refer to: A05052		

r7026	CO: Par_circuit max. deviation currents phase V / Phase V Max i_dev		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the maximum absolute deviation of the measured current actual values of phase V from the average value as peak value. The deviation of the individual currents from the average value is displayed in r7021.		
Dependency:	Refer to: r7021, r7025, r7027 Refer to: A05052		
r7027	CO: Par_circuit max. deviation currents phase W / Phase W Max i_dev		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min	Max	Factory setting
	- [A]	- [A]	- [A]
Description:	Displays the maximum absolute deviation of the measured current actual values of phase W from the average value as peak value. The deviation of the individual currents from the average value is displayed in r7022.		
Dependency:	Refer to: r7022, r7025, r7026 Refer to: A05052		
r7030[0...n]	CO: Par_circuit DC link voltage deviation / Vdc deviation		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: PDS, p0120	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the deviation of the measured DC link voltage from the average value. The maximum deviation from the average value is displayed in r7031.		
Dependency:	Refer to: r7031		
r7031	CO: Par_circuit DC link voltage maximum deviation / Vdc deviation max.		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Displays, signals	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: p2001	Expert list: 1
	Min	Max	Factory setting
	- [V]	- [V]	- [V]
Description:	Displays the maximum absolute deviation of the measured DC link voltage from the average value. The deviation of the individual voltages from the average value is displayed in r7030.		
Dependency:	Refer to: r7030 Refer to: A05053		

p7035 Infeed par_circuit circulating current control operating mode / Circ_I mode

A_INF (Parallel), S_INF (Parallel)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	1

Description: Sets the operating mode of the circulating current control.
The circulating current control ensures symmetrical distribution of the total currents to the individual converters.

Value: 0: Circulating current control deactivated
1: Circulating control control activated

p7035[0...n] Par_circuit circulating current control operating mode / Circ_I mode

VECTOR (Parallel)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	1

Description: Sets the operating mode of the circulating current control.
The circulating current control ensures symmetrical distribution of the total currents to the individual converters.

Value: 0: Circulating current control deactivated
1: Circulating control control activated

p7036 Infeed par_cct circulating current controller proportional gain / Circ_I Kp

A_INF (Parallel), S_INF (Parallel)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [%]	1000.00000 [%]	100.00000 [%]

Description: Sets the normalized proportional gain for the circulating current controller.

Note: A value of 100 % corresponds to the basic setting derived from loop control parameters (p3421, p3622).

p7036[0...n] Par_circuit circulating current control proportional gain / Circ_I Kp

VECTOR (Parallel)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00000 [Ohm]	20.00000 [Ohm]	0.00000 [Ohm]

Description: Sets the proportional gain for the circulating current controller.
The parameter is preset to the cable resistance.

p7037	Infeed par_cct circulating current control integral time / I_circ Tn		
A_INF (Parallel), S_INF (Parallel)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0 [%]	Max 100000.0 [%]	Factory setting 100.0 [%]
Description:	Sets the normalized integral time of the circulating current controller.		
Note:	A value of 100 % corresponds to the basic setting derived from the controller sampling time p0115[0]. The integral component of the controller is deactivated with p7037 = 0.		

p7037[0...n]	Par_circuit circulating current control integral time / I_circ Tn		
VECTOR (Parallel)	Can be changed: U, T	Calculated: CALC_MOD_CON	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 2.0	Max 1000.0	Factory setting 4.0
Description:	Sets the integral time of the circulating current controller. The parameter is referred to the current controller sampling time (p0115[0]).		
Dependency:	Refer to: p0115		

p7038	Infeed par_circuit circulating current control limit / I_circ limit		
A_INF (Parallel), S_INF (Parallel)	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 1 [%]	Max 100 [%]	Factory setting 100 [%]
Description:	Sets the limit of the circulating current controller output values. The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).		

p7038[0...n]	Par_circuit circulating current control limit / I_circ limit		
VECTOR (Parallel)	Can be changed: U, T	Calculated: CALC_MOD_ALL	Access level: 3
	Data type: FloatingPoint32	Dynamic index: DDS, p0180	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 1 [%]	Max 100 [%]	Factory setting 50 [%]
Description:	Sets the limit of the circulating current controller output values. The parameter is, depending on the phase, referred to the valve lockout times (p1828, p1829, p1830).		

p7040[0...n]	Par_circuit correction valve lockout time phase U / Comp t_lockout U		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: PDS, p0120	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -1000000.00 [μs]	Max 1000000.00 [μs]	Factory setting 0.00 [μs]
Description:	For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase U (p1828). The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.		
Dependency:	Refer to: p1828		
p7042[0...n]	Par_circuit correction valve lockout time phase V / Comp t_lockout V		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: PDS, p0120	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -1000000.00 [μs]	Max 1000000.00 [μs]	Factory setting 0.00 [μs]
Description:	For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase V (p1829). The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.		
Dependency:	Refer to: p1829		
p7044[0...n]	Par_circuit correction valve lockout time phase W / Comp t_lockout W		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: PDS, p0120	Func. diagram: -
	P-Group: Modulation	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -1000000.00 [μs]	Max 1000000.00 [μs]	Factory setting 0.00 [μs]
Description:	For the particular Motor Module, the correction time must be added to the valve lockout time to be compensated for phase W (p1830). The corrective value is used to compensate variations/spread in the valve lockout times of Motor Modules for a parallel circuit configuration.		
Dependency:	Refer to: p1830		
r7050[0...n]	Par_circuit circulating current phase U / Circ_I_phase U		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: PDS, p0120	Func. diagram: -
	P-Group: Displays, signals	Units group: 6_5	Unit selection: p0505
	Not for motor type: -	Scaling: p2002	Expert list: 1
	Min - [A]	Max - [A]	Factory setting - [A]
Description:	Displays the circulating current of phase U as peak value.		

r7051[0...n]	Par_circuit circulating current phase V / Circ_I_phase V		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: PDS, p0120 Units group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the circulating current of phase V as peak value.		
r7052[0...n]	Par_circuit circulating current phase W / Circ_I_phase W		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [A]	Calculated: - Dynamic index: PDS, p0120 Units group: 6_5 Scaling: p2002 Max - [A]	Access level: 3 Func. diagram: - Unit selection: p0505 Expert list: 1 Factory setting - [A]
Description:	Displays the circulating current of phase W as peak value.		
r7100[0...99]	Par_circuit ring buffer fault/alarm code / Fault/alarm code		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). Displays the fault/alarm code.		
Dependency:	Refer to: r7101, r7102, r7103		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		
r7101[0...99]	Par_circuit ring buffer data set number / Ring buffer Ds_No		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). p7101 < 100: Displays the Power unit Data Set number (PDS). p7101 >= 100: Displays the Voltage Sensing Module Data Set number (VSMDS)		
Dependency:	Refer to: r7100, r7102, r7103		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		

r7102[0...99]	Par_circuit ring buffer fault/alarm received / F/A received		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). Displays the relative system runtime when the fault or alarm occurred.		
Dependency:	Refer to: r7100, r7101, r7103		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		
r7103[0...99]	Par_circuit ring buffer fault/alarm gone / F/A gone		
A_INF (Parallel), B_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: Unsigned32 P-Group: Displays, signals Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Ring buffer for faults and alarms that have occurred from power units connected in parallel (Motor Module, Active Line Infeed, Voltage Sensing Module). Displays the relative system runtime when the fault or alarm was withdrawn.		
Dependency:	Refer to: r7100, r7101, r7102		
Note:	The last fault case that occurred is documented in index 0. The parameter is reset to 0 at POWER ON.		
r7200[0...n]	Par_circuit power unit overload I2T / PU overload I2T		
A_INF (Parallel), S_INF (Parallel), VECTOR (Parallel)	Can be changed: - Data type: FloatingPoint32 P-Group: Displays, signals Not for motor type: - Min - [%]	Calculated: - Dynamic index: PDS, p0120 Units group: - Scaling: PERCENT Max - [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [%]
Description:	Displays the overload of the particular power unit in a parallel circuit configuration calculated using the I2t function. The maximum value of all power units is displayed in r0036.

Description: Displays the status of the temperature evaluation of the particular Voltage Sensing Module (VSM) for a parallel circuit configuration.

This displays whether the temperature actual value has exceeded the fault/alarm threshold.

The overall status of the temperature evaluation of all VSMS is displayed in r3664.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Temperature alarm threshold exceeded	Yes	No	-
	01	Temperature fault threshold exceeded	Yes	No	-

- [°C]

Description: Displays the temperature actual value of the KTY84 temperature sensor connected to the Voltage Sensing Module (VSM) for a parallel circuit configuration.

The maximum value of all VSMS is displayed in r3666.

Prerequisite:

A KTY84 sensor is connected and p3665 is set to 2.

Dependency: Refer to: p3665

p7770	NVRAM action / NVRAM action		
A_INF, B_INF, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VEC- TOR	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	3	0
Description:	Sets the action to be executed for NVRAM data. At the end of the action the value is automatically set to 0.		

Value:

- 0: Inactive
- 1: Load NVRAM data to parameters
- 2: Load parameters to NVRAM
- 3: Reset

Notice: After action p7770 = 1 no more pulses may be enabled.
After action p7770 = 2, it is essential that parameters are backed up (p0977 = 1) and that a warm restart is then performed (p0009 = 30, p0976 = 2, 3). This will apply the values written.

Note: Re value = 1:
This action loads the NVRAM data to the parameters.
Re value = 2:
This action loads the parameters to the NVRAM.
Re value = 3:
This action sets parameters p7771 ... p7774 to the factory setting.
It is recommended to avoid placing unnecessary load on the subsequent upload/download operation.

p7788 Sign-of-life monitoring tolerance window /

A_INF, B_INF,
S_INF, SERVO,
VECTOR

Can be changed: U, T

Max

1000

Access level: 4

Func. diagram: -

Unit selection: -

Expert list: 1

Factory setting

10

Description: The size of the window for monitoring sign-of-life errors on the power unit.

Dependency: Refer to: A30853

Note: An active window is generated by means of DRIVE-CLiQ telegrams. If more than one sign-of-life error appears in the window, A30853 is issued. The lower the value in p7788, the greater the tolerance of the monitoring procedure.

p7789 Sign-of-life monitoring fault threshold /

Description:	Displays the firmware and EPROM versions of the DRIVE-CLiQ component selected using p7828[1].		
Index:	[0] = Reference firmware version [1] = Actual firmware version [2] = EPROM0 version [3] = EPROM1 version [4] = EPROM2 version [5] = EPROM3 version [6] = EPROM4 version		
Dependency:	Refer to: p7828		
Note:	Reference firmware version: Version on the memory card/device memory. Current firmware version: Actual version of the DRIVE-CLiQ component. EPROM version: Current EPROM version of the DRIVE-CLiQ component.		

p7826	Firmware update automatic / FW update auto		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min 0 Max 2	Calculated: - Dynamic index: - Units group: - Scaling: - Factory setting 1	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
Description:	Sets the behavior for the automatic firmware update of the DRIVE-CLiQ components.		
Value:	0: Deactivated 1: Upgrade and downgrade 2: Upgrade		
Notice:	If this parameter is changed, it only becomes effective the next time that the drive system boots.		
Note:	The firmware is automatically updated when the system boots. The boot can take several minutes. After the update has been completed, it is necessary to carry out a new POWER ON (power-down/power-up) for the components involved. The firmware update procedure is displayed as follows: Control Unit (LED RDY): Flashes yellow with 0.5 Hz --> firmware is being updated. Flashing yellow with 2 Hz --> POWER ON is required for the components involved. Components involved: Flashing red/green with 0.5 Hz --> firmware is being updated. Flashing red/green with 2 Hz --> POWER ON of the components is required. Only components from firmware version 2.5 support the red/green flashing at 2 Hz.		
r7827	Firmware update progress display / FW update progress

r7843[0...20] Memory card serial number / Mem_card ser.no

CU_I, CU_S,
 CU_S_CU310DP,
 CU_S_CU310PN,
 CU_S_S150

Can be changed: -

Calculated: -

Access level: 1

Data type: Unsigned8

Dynamic index: -

Func. diagram: -

P-Group: -

Units group: -

Unit selection: -

Not for motor type: -

Scaling: -

Expert list: 1

Min

Max

Factory setting

-

-

-

Description:

Displays the actual serial number of the memory card.

Dependency:

The individual characters of the serial number are displayed in the ASCII code in the indices.

Notice:

Refer to: p9920, p9921

Note:

An ASCII table (excerpt) can be found, for example, in the Appendix of the List Manual:

Example: displaying the serial number for a memory card:

r7843[0] = 49 dec --> ASCII characters = "1" --> serial number, character 1
 r7843[1] = 49 dec --> ASCII characters = "1" --> serial number, character 2
 r7843[2] = 49 dec --> ASCII characters = "1" --> serial number, character 3
 r7843[3] = 57 dec --> ASCII characters = "9" --> serial number, character 4
 r7843[4] = 50 dec --> ASCII characters = "2" --> serial number, character 5
 r7843[5] = 51 dec --> ASCII characters = "3" --> serial number, character 6
 r7843[6] = 69 dec --> ASCII characters = "E" --> serial number, character 7
 r7843[7] = 0 dec --> ASCII characters = " " --> serial number, character 8

...

r7843[19] = 0 dec --> ASCII characters = " " --> serial number, character 20

r7843[20] = 0 dec

Serial number = 111923E

r7844[0...1]	Memory card/device memory firmware version / Mem_crd/dev_mem FW		
CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the version of the firmware stored on the memory card/device memory.		
Note:	Example: The value 1010100 should be interpreted as V01.01.01.00.		
r7850[0...23]	Drive object operational/not operational / DO ready for oper		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Integer16 P-Group: - Not for motor type: - Min -32786	Calculated: - Dynamic index: - Units group: - Scaling: - Max 32767	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays whether, for an activated drive object, all activated topology components are available or not (or whether these can be addressed). 0: Drive object not ready for operation 1: Drive object ready for operation		
p7852	Number of indices for r7853 / Qty indices r7853		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned16 P-Group: - Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 200	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Displays the number of indices for r7853[0...n]. This corresponds to the number of DRIVE-CLiQ components that are in the target topology.		
Dependency:	Refer to: r7853		
Note:	The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.		
r7853[0...n]	Component available/not available / Comp present		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: p7852 Units group: - Scaling: - Max FFFF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the component and whether this component is currently present. High byte: Component number Low byte: 0/1 (not available/available)		
Dependency:	Refer to: p7852		
Note:	The values are valid if all available Control Units adopt the "Initialization finished" state (r3988 = 800) following power-up.		

p7857	Sub-boot mode / Sub-boot mode		
A_INF, B_INF, CU_LINK, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VEC- TOR	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1
	Min 0	Max 1	Factory setting 1
Description:	Sets the mode for the sub-boot.		
Value:	0: Sub-boot manual 1: Sub-boot automatic		
Note:	For p7857 = 0 (manual sub-boot) the following applies: The parameter should be set to 1 to start the sub-boot.		
p7859[0...199]	Component number global / Comp_nr global		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 0
	Min -32786	Max 32767	Factory setting 0
Description:	Sets the global and unique component number in a drive system with several Control Units. Each index of the parameter corresponds to a possible local component number on the corresponding Control Unit. The indices are allocated to the global component numbers as follows: p7859[0]: Not used p7859[1]: Sets the global component number for the local component number 1 p7859[2]: Sets the global component number for the local component number 2 ... p7859[199]: Sets the global component number for the local component number 199		
Notice:	This parameter is preferably set via suitable commissioning software (e.g. UpdateAgent, STARTER, SCOUT). Changing the parameter via the AOP (Advanced Operator Panel) or BOP (Basic Operator Panel) can destroy a valid unique setting.		
Note:	The parameter is not influenced by setting the factory setting.		
r7867	Status/configuration changes global / Changes global		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned32 P-Group: - Not for motor type: -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1
	Min -	Max -	Factory setting -
Description:	Displays status and configuration changes of all of the drive objects in the complete unit. When changing the status or the configuration of the Control Unit or a drive object, the value of this parameter is incremented.		
Dependency:	Refer to: r7868, r7869, r7870		

r7868[0...24]	Configuration changes drive object reference / Config_chng DO ref

When changing either p0107 or p0108, the value in this index is incremented.		

r7872[0...3] Status changes drive object / Status_chng DO

All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status changes on the drive object.
Index 0:
When changing one of the following indices, then the value in this index is incremented.
Index 1:
Drive object faults. When changing r0944, the value in this index is incremented.
Index 2:
Drive object alarms. When changing r2121, the value in this index is incremented.
Index 3:
Drive object safety messages. When changing r9744, the value in this index is incremented.

Index: [0] = Sum of the following indices
[1] = Faults (r0944)
[2] = Alarms (r2121)
[3] = Safety messages (r9744)

Dependency: Refer to: r7869

p7900[0...23] Drive objects priority / DO priority

CU_CX32, CU_I,	Can be changed: U, T	Calculated: -	Access level: 4
CU_S,	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
CU_S_CU310DP,	P-Group: -	Units group: -	Unit selection: -
CU_S_CU310PN,	Not for motor type: -	Scaling: -	Expert list: 1
CU_S_S150	Min	Max	Factory setting
	0	65535	0

Description: Sets the priority for processing the existing drive objects in the system.
The parameter enables a free sequence to be set for processing the drive objects. For this purpose all the drive object numbers existing in the system have to be written in the desired sequence into the corresponding indices of the parameter. After re-booting this sequence will be effective without a plausibility check.
With the factory setting the following priorities regarding processing are applicable:
- The drive objects are pre-sorted according to their type as follows: CONTROL UNIT, INFEED, SERVO, VECTOR, TM, HUB, CU-LINK
- If they are of the same type, they are sorted in ascending order according to their drive object number, i.e. the lower the number, the higher the priority for processing.

Index: [0] = Drive object number Control Unit
[1] = Drive object number object 1
[2] = Drive object number object 2
[3] = Drive object number object 3
[4] = Drive object number object 4
[5] = Drive object number object 5
[6] = Drive object number object 6
[7] = Drive object number object 7
[8] = Drive object number object 8
[9] = Drive object number object 9
[10] = Drive object number object 10
[11] = Drive object number object 11
[12] = Drive object number object 12
[13] = Drive object number object 13
[14] = Drive object number object 14
[15] = Drive object number object 15
[16] = Drive object number object 16
[17] = Drive object number object 17

[18] = Drive object number object 18
 [19] = Drive object number object 19
 [20] = Drive object number object 20
 [21] = Drive object number object 21
 [22] = Drive object number object 22
 [23] = Drive object number object 23

Notice: This parameter may only be used by qualified service personnel.

Note: If the same drive object numbers are used and if the existing drive object numbers in the system are entered incompletely, the content of this parameter is ignored entirely. The behavior as with factory setting will then become effective.

r7901[0...43] Sampling times / t_sample

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: FloatingPoint32 P-Group: - Not for motor type: - Min - [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [µs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [µs]
--	--	---	--

Description: Displays the sampling times currently present on the drive unit.
 For r7901[x] = 0, the following applies: The time slice is not active.

r7903 Hardware sampling times still cannot be assigned / HW t_samp free

CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
--	--	--	---

Description: Displays the number of hardware sampling times that can still be assigned.
 These free sampling times can be used by OA applications such as DCC (Drive Control Chart) or FBLOCKS (free function blocks).

Note: OA: Open Architecture

p8500[0...7] BI: Data transfer 0 bitwise / Transfer 0 bit

CU_CX32, CU_LINK	Can be changed: U, T Data type: Unsigned32 / Binary P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: 2211 Unit selection: - Expert list: 1 Factory setting 0
------------------	--	--	--

Description: Sets the signal source for bitwise data transfer.
 These signals are transferred to another Control Unit and are located in BO: r8510.0 ... 7 for further interconnection.

Index:
 [0] = Send signal to BO: r8510.0

Dependency:	Refer to: p1500		
Note:	For a value = 9999999, the following applies: The read operation is still running.		
r8585	Actual macro running / Actual macro		
A_INF, B_INF, CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, S_INF, SERVO, TM120, TM15DI_DO, TM31, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Indicates which macro is presently being run in the drive object.		
Dependency:	Refer to: p0015, p0700, p1000, p1500, r8570, r8571, r8572, r8573		

r8600	CAN device type / Device type		
CU_S (CAN), CU_S_S150 (CAN)	Can be changed: - Data type: Unsigned32 P-Group: Communications Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays all of the devices connected to the CAN bus after run-up. r8600 = 00000000 hex: No drive recognized. = FFFF0192 hex: Several drives - drive 1 is an Active Line Module, servo drive or vector drive = FFFF0191 hex: Several drives - 1st drive is a Terminal Module = 02010192 hex: 1 Vector drive = 00020192 hex: 1 Servo drive = 01000192 hex: 1 Active Line Module = 00080191 hex: 1 Terminal Module		
Note:	Corresponds to the CANopen object 1000 hex. For each detected drive, the device type is displayed in object 67FF hex + 800 hex * x (x: Drive number 0 ... 7).		
r8601	CAN error register / Error register		
CU_S (CAN), CU_S_S150 (CAN)	Can be changed: - Data type: Unsigned8 P-Group: Communications Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the error register for CANopen. Bit 0: Generic error 0 signal: No error present. 1 signal: Generic error present. Bit 1 ... 3: Not supported (always a 0 signal) Bit 4: Communications error 0 signal: There is no message in the range 8700 ... 8799. 1 signal: There is at least one message (fault or alarm) in the range 8700 ... 8799. Bit 5 ... 6: Not supported (always a 0 signal) Bit 7: Fault outside the range 8700 ... 8799 0 signal: There is no fault outside the range 8700 ... 8799. 1 signal: There is at least one fault outside the range 8700 ... 8799.		
Note:	Corresponds to the CANopen object 1001 hex.		
p8602	CAN SYNC object / SYNC object		
CU_S (CAN), CU_S_S150 (CAN)	Can be changed: C1(1), T Data type: Unsigned32 P-Group: Communications Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0080 hex
Description:	Sets the SYNC object parameter for the following CANopen objects: - 1005 hex: COB-ID		
Note:	SINAMICS operates as SYNC load. COB-ID: CAN object identification		

p8603	CAN COB ID Emergency Message / COB ID EMCY Msg		
CU_S (CAN), CU_S_S150 (CAN)	Can be changed: C1(1), T Data type: Unsigned32 P-Group: Communications Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the COB ID of the emergency message (error telegram). It corresponds to the CANopen objects: - 1014 hex: COB-ID		
Note:	If, when downloading, the preset value 0 is downloaded, then the CANopen preset value 80 hex + Node-ID is automatically set. Online, the value 0 is rejected as, according to the CANopen Standard, COB ID 0 is not permitted here. The changeover of the node ID using the hardware switch at the CU or per software has no effect on the COB-ID EMCY. The saved value remains effective.		
p8604[0...1]	CAN node guarding / Node guarding		
CU_S (CAN), CU_S_S150 (CAN)	Can be changed: T Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the node guarding parameter for the following CANopen objects: - 100C hex: Guard Time - 100D hex: Life Time Factor The life time is derived by multiplying guard time by the life time factor.		
Index:	[0] = Time interval [ms] for new node guarding telegram [1] = Factor for failure of the node guarding telegram		
Dependency:	Only adjustable if heartbeat time = 0 (heartbeat is disabled). Refer to: p8606		
Note:	For p8604[0] = 0 and/or p8604[1] = 0, the node guarding protocol is not used. Either node guarding or heartbeat can be used.		
p8606	CAN Producer Heartbeat Time / Prod Heartb Time		
CU_S (CAN), CU_S_S150 (CAN)	Can be changed: T Data type: Unsigned16 P-Group: - Not for motor type: - Min 0 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 65535 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0 [ms]
Description:	Sets the time [ms] to cyclically send heartbeat telegrams. The smallest cycle time is 100 ms. When a 0 is written, then heartbeat telegrams are not sent.		
Dependency:	Only adjustable if guard time = 0 (node guarding disabled). Refer to: p8604		
Note:	Corresponds to the CANopen object 1017 hex. Either node guarding or heartbeat can be used.

0000 hex

FFFF 1000 hex

0000 hex

Description:

Displays the Pre-defined Error Field of the CAN node.

It includes the number of all errors that have occurred, the number of errors that have occurred for each drive and the errors according to their history.

The first 16 bits represent the CANopen error code and the second 16 bits the SINAMICS error code.

Index 1 has the same structure - however, the drive object ID is in the second 16 bits instead of the SINAMICS error code.

CANopen error code:

0000 hex: No error present

8110 hex: Alarm A08751 present

8120 hex: Alarm A08752 present

8130 hex: Alarm A08700(F) with alarm value = 2 present

1000 hex: Generic error 1 present (there is at least one fault outside the range 8700 ... 8799)

1001 hex: Generic error 2 present (there is at least one alarm in the range 8700 ... 8799 with the exception of A08751, A08752, A08700)

All drive objects are acknowledged by writing the value 0 to the index 0. As soon as a fault has been acknowledged or an alarm cleared, then it is also cleared from the fault list.

Index:[0] = Number of all faults in the drive unit
[1] = Most recent drive number / fault number
[2] = Number of faults drive 1
[3] = Fault 1/ drive 1
[4] = Fault 2/ drive 1
[5] = Fault 3/ drive 1
[6] = Fault 4/ drive 1
[7] = Fault 5/ drive 1
[8] = Fault 6/ drive 1
[9] = Fault 7/ drive 1

 [81] = Fault 7/Control Unit
 [82] = Fault 8/Control Unit

Note: Corresponds to the CANopen object 1003 hex.

p8620 CAN Node-ID / Node ID

CU_S (CAN), CU_S_S150 (CAN)	Can be changed: T	Calculated: -	Access level: 2
	Data type: Unsigned8	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	126	126

Description: Display or setting of the CANopen Node ID.
 The Node ID can be set as follows:
 1) Using the address switch on the Control Unit.
 --> p8620 can then only be read and displays the selected Node ID.
 --> A change only becomes effective after a POWER ON.
 --> CANopen Node ID and PROFIBUS address are identical.
 2) Using p8620
 --> only if all of the DIP switches - from S1 to S7 - are either set to ON or OFF.
 --> the Node ID is set as standard to 126.
 --> A change only becomes effective after save and POWER ON.

Note: Every node ID change only becomes effective after a POWER ON.
 The parameter is not influenced by setting the factory setting.
 It is only possible to independently set CANopen node ID and the PROFIBUS address using p0918 and p8620 (pre-requisite: For DIP switches, all of the switches from S1 to S7 are either set to ON or OFF).

p8622 CAN baud rate / Baud rate

CU_S (CAN), CU_S_S150 (CAN)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	7	6

Description: Setting the baud rate for the CAN bus.
 The appropriate bit timings are selected that are defined in p8623 in the associated sub-index.
 Example:

Baud rate = 20 kbit/s --> p8622 = 6 --> associated bit timing is in p8623[6].

Value:

0:	1 Mbit/s
1:	800 kbit/s
2:	500 kbit/s
3:	250 kbit/s
4:	125 kbit/s
5:	50 kbit/s
6:	20 kbit/s
7:	10 kbit/s

Dependency: Refer to: p8623

Note: The parameter is not influenced by setting the factory setting.

p8623[0...7] CAN Bit Timing selection / Bit timing select			
CU_S (CAN), CU_S_S150 (CAN)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	000F 7FFF hex	[0] 1405 hex
			[1] 1605 hex
			[2] 1C05 hex
			[3] 1C0B hex
			[4] 1C17 hex
			[5] 1C3B hex
			[6] 0002 1C15 hex
			[7] 0004 1C2B hex
Description:	Sets the bit timing for the C_CAN controller to the associated and selected baud rate (p8622). Bits are distributed to the following parameters of the C_CAN controller in p8623[0...7]: Bit 0 ... 5: BRP (Baud Rate Prescaler) Bit 6 ... 7: SJW (Synchronization Jump Width) Bit 8 ... 11: TSEG1 (Time Segment 1, before the sampling point) Bit 12 ... 14: TSEG2 (Time Segment 2, after the sampling point) Bit 15: Reserved Bit 16 ... 19: BRPE (Baud Rate Prescaler Extension) Bit 20 ... 31: Reserved Example: Baud rate = 20 kbit/s --> p8622 = 6 --> associated bit timing is in p8623[6] --> 0001 2FB6		
Recommend.:	Use the factory setting when setting the bit timing.		
Index:	[0] = 1 Mbit/s [1] = 800 kbit/s [2] = 500 kbit/s [3] = 250 kbit/s [4] = 125 kbit/s [5] = 50 kbit/s [6] = 20 kbit/s [7] = 10 kbit/s		
Dependency:	Refer to: p8622		
Note:	The parameter is not influenced by setting the factory setting.

r8784 CO: CAN status word / Status word

SERVO (CAN), VECTOR (CAN)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 8010
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the CANopen status word.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Ready for sw on	Yes	No	-
	01	Ready	Yes	No	-
	02	Operation enabled	Yes	No	-
	03	Fault present	Yes	No	-
	04	No coasting active	Yes	No	-
	05	No Quick Stop active	Yes	No	-
	06	Switching on inhibited active	Yes	No	-
	07	Alarm present	Yes	No	-
	08	Can be freely interconnected (BI: p8785)	High	Low	-
	09	Control request	Yes	No	-
	10	Target reached	Yes	No	-
	11	Torque limit reached	Yes	No	-
	12	Velocity equal to zero	Yes	No	-
	14	Can be freely interconnected (BI: p8786)	High	Low	-
	15	Can be freely interconnected (BI: p8787)	High	Low	-

Note: Corresponds to the CANopen object 6041 hex + 800 hex * x (x: Drive number 0 ... 7).

Re bit 10:

When the ramp-function generator is activated, the interconnection from CI: p2151 = r1119 can be changed, so that to evaluate bit 10, the setpoint can be retrieved (taken) from in front of the ramp-function generator.

Re bit 10, 12:

When braking, the two bits must indicate the same state. This is the reason that the following parameters must be set the same:

p2161 (speed threshold value 3, for r2199.0) = p2163 (speed threshold value 4, for r2197.7)

p2150 (hysteresis speed 3, for r2199.0) = p2164 (hysteresis speed 4, for r2197.7)

p8785 BI: CAN status word bit 8 / Status word bit 8

SERVO (CAN), VEC-	Can be changed: T	Calculated: -	Access level: 3

Dependency:	Refer to: r8784		

p8787 BI: CAN status word bit 15 / Status word bit 15

SERVO (CAN), VEC-	Can be changed: T	Calculated: -	Access level: 3
TOR (CAN)	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: -
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0
Description:	Binector input for CANopen status word bit 15.		
Dependency:	Refer to: r8784		

p8790 CAN control word - auto interconnection / STW interc auto

SERVO (CAN), VEC-	Can be changed: C1(3), T	Calculated: -	Access level: 3
TOR (CAN)	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	0
Description:	Sets the automatic BICO interconnection of the CANopen control word.		
Value:	0: No interconn 1: Interconnection		
Dependency:	Refer to: r2050, r2090, r2091, r2092, r2093, r8750, r8795, r8850, r8890, r8891, r8892, r8893		

Note: The following BICO interconnections are automatically established if the CANopen control word is mapped at one of the locations x = 0 ... 3 in the receive process data buffer.
 For SINAMICS S120 with CBC10, the PZD interface IF2 is used:
 BI: p0840.0 = r889x.0
 BI: p0844.0 = r889x.1
 BI: p0848.0 = r889x.2
 BI: p0852.0 = r889x.3
 BI: p2103.0 = r889x.7
 For SINAMICS S110, the PZD interface IF1 is used:
 BI: p0840.0 = r209x.0
 BI: p0844.0 = r209x.1
 BI: p0848.0 = r209x.2
 BI: p0852.0 = r209x.3
 BI: p2103.0 = r209x.7
 The write access is rejected if a CANopen control word is not mapped at one of these locations.
 This also causes the project download of the commissioning software to be canceled.

r8795 CAN control word / Control word

SERVO (CAN), VECTOR (CAN)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
-	-	-	

Description: Access to the CANopen control word using SDO transfer.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	ON/OFF1	Yes	No	-
	01	Do not activate coast down	Yes	No	-
	02	Do not activate a Quick Stop	Yes	No	-
	03	Operation enable	Yes	No	-
	07	Acknowledge fault	Yes	No	-
	11	Freely interconn	High	Low	-
	12	Freely interconn	High	Low	-
	13	Freely interconn	High	Low	-
	14	Freely interconn	High	Low	-
	15	Freely interconn	High	Low	-

Dependency: Refer to: p8790

Note: Corresponds to the CANopen object 6040 hex + 800 hex * x (x: Drive number 0 ... 7).

r8796 CAN Target Velocity / Target velocity

SERVO (CAN), VECTOR (CAN)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
-	-	-	

Description: Access to the CANopen object target velocity using the SDO transfer.

The value is displayed in increments/second as standard.

Note: Corresponds to the CANopen object 60FF hex + 800 hex * x (x: Drive number 0 ... 7).

The displayed value is calculated as follows:

$r8796 = n_set [RPM] / 60 \text{ s} * p0408 * 2^{p0418} * p8798[1] / p8798[0]$

r8797 CAN Target Torque / Target torque

SERVO (CAN), VEC-TOR (CAN)	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Access to the CANopen object target torque using SDO transfer.
The value is displayed as per mille (1/1000) as standard.

Note: Corresponds to the CANopen object 6071 hex + 800 hex * x (x: Drive number 0 ... 7).
The displayed value is calculated as follows:
r8797 [per mille] = M_set [Nm] / p0333 [Nm] * 1000

p8798[0...1] CAN speed conversion factor / n_conv_factor

SERVO (CAN), VEC-TOR (CAN)	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	4294967295	1

Description: The factor converts the required velocity units into the internal velocity units (V/s).
With the factor setting, for CANopen, the velocity units are increments/second.
The parameter corresponds to the CANopen object 6094 hex.
The internal velocity is calculated as follows:

$$n_set_internal = object\ 6094.1 / object\ 6094.2 * 1/(p0408 * 2^{p0418}) * n_set_bus$$

Index: [0] = Counter
[1] = Denominator

p8835 CBE20 firmware selection / CBE20 FW sel

CU_S (PROFINET), CU_S_CU310PN, CU_S_S150 (PROFI- NET)	Can be changed: C1(1)	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	1	99	1

Description: Selects the firmware version for the PROFINET COMM BOARD CBE20.

Value: 1: PROFINET V2.2
2: PN gate
3: SINAMICS Link
99: Customer-specific from the OEM directory

Note: A change only becomes effective after a POWER ON.
The parameter is not influenced by setting the factory setting.

p8836	SINAMICS Link address / SINAMICS Link add		
CU_S (PROFINET), CU_S_CU310PN, CU_S_S150 (PROFI- NET)	Can be changed: C1(1)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 64	Factory setting 0
Description:	Selects the node address for the SINAMICS Link on the Communication Board Ethernet 20 (CBE20). p8836 = 0: SINAMICS Link deactivated p8836 = 1 ... 64: SINAMICS Link node address		
Dependency:	Refer to: p8835		
Note:	SINAMICS Link requires that the appropriate CBE20 firmware version is selected (p8835 = 3). A change only becomes effective after a POWER ON. The parameter is not influenced by setting the factory setting.		

p8839[0...1]	PZD interface hardware assignment / PZD IF HW assign		
CU_S, CU_S_S150	Can be changed: C1(1)	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 99	Factory setting 99
Description:	Assignment of the hardware for cyclic communications via PZD interface 1 and interface 2.		
Value:	0: Inactive 1: Communication interface integrated in the Control Unit 2: Option module 99: Automatic		
Index:	[0] = IF1 [1] = IF2		
Note:	For value = 99 (automatic) the following applies: - if neither a COMM BOARD nor CAN is inserted, then PROFIBUS communicates via IF1. - if a CBE20 is inserted, then PROFINET communicates via IF1. PROFIBUS PZD are deactivated. - CAN always communicates via IF2. For a value not equal to 99 (automatic) the following applies: - both indices must be set to a number not equal to 99 (automatic). A new setting only becomes effective after POWER ON, reset or download.		

p8840	COMM BOARD monitoring time / CB t_monit

Dependency: Refer to: r8894, r8895, p8899

p8899[0...1] CI: IF2 connector-binector converter signal source / Con/bin S_src

A_INF, B_INF, ENCODER, S_INF, SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Unsigned32 / Integer16	Dynamic index: -	Func. diagram: 2485, 2491
	P-Group: Communications	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source for the connector-binector converter.
A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: Refer to: r8894, r8895

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted.
p8899[0...1] together with r8894.0...15 and r8895.0...15 forms two connector-binector converters:
Connector input p8899[0] to binector output in r8894.0...15
Connector input p8899[1] to binector output in r8895.0...15

p8900[0...239]	IE Name of Station / IE Name Stat		
CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned8 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Sets the station name for the Industrial Ethernet interface (X127) on the Control Unit. The active station name is displayed in r8910.		
Dependency:	Refer to: p8905, r8910		
Note:	An ASCII table (excerpt) can be found, for example, in the Appendix of the List Manual: The interface configuration (p8900 and following) is activated with p8905 = 1. The parameter is not influenced by setting the factory setting. IE: Industrial Ethernet		
p8901[0...3]	IE IP Address of Station / IE IP of Stat

	Min		Max	Factory setting	
	0		1	0	
Description:	Sets the function specification for Safety Integrated.				
Value:	0: Safety with encoder 1: Safety without encoder				
Dependency:	Refer to: C30711				
p9307	SI Motion function configuration MM / SI Mtn config MM				
SERVO, VECTOR	Can be changed: C2(95)		Calculated: -	Access level: 3	
	Data type: Unsigned32		Dynamic index: -	Func. diagram: -	
	P-Group: Safety Integrated		Units group: -	Unit selection: -	
	Not for motor type: -		Scaling: -	Expert list: 1	
	Min		Max	Factory setting	
	-		-	0000 bin	
Description:	Function configuration for Safe Motion Monitoring				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Extended alarm acknowledgment	Yes	No	-
	01	Setpoint speed limit for stop F	No	Yes	-
Dependency:	Refer to: C01711				
p9311	SI Motion actual value sensing clock cycle (Motor Module) / SI Mtn act clk MM				
SERVO, VECTOR	Can be changed: C2(95)		Calculated: -	Access level: 3	
	Data type: FloatingPoint32		Dynamic index: -	Func. diagram: -	
	P-Group: Safety Integrated		Units group: -	Unit selection: -	
	Not for motor type: -		Scaling: -	Expert list: 1	
	Min		Max	Factory setting	
	0.0000 [µs]		25000.0000 [µs]	0.0000 [µs]	
Description:	Sets the clock cycle time of the actual value sensing for safe motion monitoring. The slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for the safe actual value sensing. The maximum permissible velocity, which when exceeded can mean that errors occur during safe actual value sensing, is displayed in r9730. Setting criteria if the motion monitoring functions are executed without an encoder: - The actual value sensing clock cycle must be set to the same value as the current controller clock cycle (p115).				
Dependency:	Refer to: p0115, p9300, p9511 Refer to: F01652				
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.				
Note:	The parameter is only active for drive-based motion monitoring functions (p9801.2 = 1). The monitoring clock cycle from p9300 must be an integer multiple of this parameter. In the case of motion monitoring functions with encoder, the clock cycle time for actual value sensing must be an integer multiple of the current controller clock cycle and at least 4 times slower than the current controller clock cycle. A factor of at least 8 is recommended. A change only becomes effective after a POWER ON.				

p9315 SI Motion coarse position value configuration (Motor Module) / SI Mtn s config MM

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the encoder configuration for the redundant coarse position value.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Incrementer	Yes	No	-
	01	Encoder CRC least significant byte first	Yes	No	-
	02	Redundant coarse position val. most significant bit left-aligned	Yes	No	-
	16	DRIVE-CLiQ encoder	Yes	No	-

Dependency: Refer to: r0474, p9515

p9316 SI Motion encoder configuration, safety functions (Motor Module) / SI Mtn enc_cfg MM

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0000 bin

Description: Sets the configuration for the encoder and position actual value.

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Encoder rotating/linear	Linear	Rotating:	-
	01	Position actual value, sign change	Yes	No	-

Dependency: Refer to: p0404, p0410, p9516

p9317 SI Motion linear scale grid division (Motor Module) / SI Mtn grid MM

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0.00 [nm]	250000000.00 [nm]	10000.00 [nm]

Description: Sets the grid division for a linear encoder.

The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.

Dependency: Refer to: p0407, p9316

p9318	SI Motion encoder pulses per revolution (Motor Module) / SI Mtn p/rev MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2048
Description:	Sets the number of encoder pulses per revolution for rotary encoders. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		
Dependency:	Refer to: p0408, p9316		
p9319	SI Motion fine resolution G1_XIST1 (Motor Module) / SI Mtn G1_XIST1 MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 2	Calculated: - Dynamic index: - Units group: - Scaling: - Max 18	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 11
Description:	Sets the fine resolution for G1_XIST1 in bits. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		
Dependency:	Refer to: p0418 Refer to: F01670, F01671		
Note:	For safety functions that have not been enabled (p9301 = 0), the following applies: When booting, p9319 is automatically set the same as p0418. For safety functions that are enabled (p9301 > 0), the following applies: p9319 is checked for agreement with p0418. G1_XIST1: Encoder 1 position actual value 1 (PROFIdrive)		
p9320	SI Motion spindle pitch (Motor Module) / SI Mtn sp_pitch MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.1000 [mm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 8388.0000 [mm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0000 [mm]
Description:	Sets the gear ratio between the encoder and load in mm/revolution for a linear axis with rotary encoder. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		
Dependency:	Refer to: p9520		
Notice:	The fourth decimal point can be rounded-off depending on the size of the entered number (from three places before the decimal point).		

p9321[0...7]	SI Motion gearbox encoder (motor)/load denom (Motor Module) / SI Mtn denom MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2147000000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the denominator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load. It is not possible to change over the gearbox stages. Gearbox stage 0 is always active.		
Index:	[0] = Gearbox 1 [1] = Gearbox 2 [2] = Gearbox 3 [3] = Gearbox 4 [4] = Gearbox 5 [5] = Gearbox 6 [6] = Gearbox 7 [7] = Gearbox 8		
Dependency:	Refer to: p9322		
p9322[0...7]	SI Motion gearbox encoder (motor)/load numerator (Motor Module) / SI Mtn numer MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2147000000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the numerator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load. It is not possible to change over the gearbox stages. Gearbox stage 0 is always active.		
Index:	[0] = Gearbox 1 [1] = Gearbox 2 [2] = Gearbox 3 [3] = Gearbox 4 [4] = Gearbox 5 [5] = Gearbox 6 [6] = Gearbox 7 [7] = Gearbox 8		
Dependency:	Refer to: p9321		
Note:	In the case of encoderless monitoring functions (p9506), the pole pair number must be multiplied by the numerator of the gearbox ratio. Example: Gearbox ratio 1:4, pole pair number (r0313) = 2 --> p9521 = 1, p9522 = 8 (4*2)		

p9323	SI Motion red. coarse position value valid bits (Motor Module) / Valid bits MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 16	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 9
Description:	Sets the number of valid bits of the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		
Dependency:	Refer to: r0470, p9523		
p9324	SI Motion redundant coarse pos. value fine resolution bits (MM) / SI Mtn fine bit MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min -16	Calculated: - Dynamic index: - Units group: - Scaling: - Max 16	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -2
Description:	Sets the number of valid bits for the fine resolution of the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		
Dependency:	Refer to: r0471, p9524		
p9325	SI Motion redundant coarse pos. value relevant bits (MM) / Relevant bits MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 16	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 16
Description:	Sets the number of relevant bits for the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		
Dependency:	Refer to: p0414, r0472, p9525		
p9326	SI Motion encoder assignment (Motor Module) / SI Mtn encoder MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the number of the encoder that the Motor Module uses for safe motion monitoring functions.		
Dependency:	For the safe motion monitoring functions, the redundant safety position actual value sensing must be activated in the appropriate encoder data set (p0430.19 = 1). Refer to: p0187, p0188, p0189, p0430, p9526		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	For p9326 = 1 the following applies: Motor Module uses an encoder for closed-loop speed control, it involves a 1-encoder system.		

p9328[0...11]	SI Motion Sensor Module Node Identifier (Motor Module) / SI Mtn SM Ident MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned8 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max 00FF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the node identifier of the Sensor Module that is used by the Motor Module for the motion monitoring functions.		
Dependency:	Refer to: r9881		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
p9329	SI Motion Gx_XIST1 Safe most significant bit (MM) / Gx_XIST1 MSB MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 31	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 14
Description:	Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position. The encoder that is used for the safe motion monitoring functions on the Motor Module must be parameterized in this parameter.		
Dependency:	Refer to: p0415, r0475, p9529		
Note:	MSB: Most Significant Bit		
p9330	SI Motion standstill tolerance (Motor Module) / SI Mtn SOS Tol MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.000 [mm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.000 [mm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000 [mm]
Description:	Sets the tolerance for the function "Safe Operating Stop" (SOS).		
Dependency:	Refer to: p9530 Refer to: C01707		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SOS: Safe Operational Stop		
p9330	SI Motion standstill tolerance (Motor Module) / SI Mtn SOS Tol MM		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.000 [°]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.000 [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.000 [°]
Description:	Sets the tolerance for the function "Safe Operating Stop" (SOS).		
Dependency:	Refer to: p9530 Refer to: C01707		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SOS: Safe Operational Stop		

p9331[0...3]	SI Motion SLS limit values (Motor Module) / SI Mtn SLS lim MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000000.00 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2000.00 [mm/min]
Description:	Sets the limit values for the function "Safely-Limited Speed" (SLS).		
Index:	[0] = Limit value SLS1 [1] = Limit value SLS2 [2] = Limit value SLS3 [3] = Limit value SLP4		
Dependency:	Refer to: p9363, p9531 Refer to: C01714		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SLS: Safely-Limited Speed		
p9331[0...3]	SI Motion SLS limit values (Motor Module) / SI Mtn SLS lim MM		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [rpm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2000.00 [rpm]
Description:	Sets the limit values for the function "Safely-Limited Speed" (SLS).		
Index:	[0] = Limit value SLS1 [1] = Limit value SLS2 [2] = Limit value SLS3 [3] = Limit value SLP4		
Dependency:	Refer to: p9363, p9531 Refer to: C01714		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SLS: Safely-Limited Speed		
p9342	SI Motion act val comparison tol (crosswise) (Motor Module) / SI Mtn act tol MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.0010 [mm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 360.0000 [mm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.1000 [mm]
Description:	Sets the tolerance for the cross-check of the actual position between the two monitoring channels. For encoderless motion monitoring functions, the tolerance must be set to a higher value (12 degrees rotary and 1 mm linear).		
Dependency:	Refer to: p9542 Refer to: C01711		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		

p9342	SI Motion act val comparison tol (crosswise) (Motor Module) / SI Mtn act tol MM		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.0010 [°]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 360.0000 [°]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.1000 [°]
Description:	Sets the tolerance for the cross-check of the actual position between the two monitoring channels. For encoderless motion monitoring functions, the tolerance must be set to a higher value (12 degrees rotary and 1 mm linear).		
Dependency:	Refer to: p9542 Refer to: C01711		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
p9345	SI Motion SSM filter time (Motor Module) / SI Mtn SSM filt MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [µs]
Description:	Sets the filter time for the SSM feedback signal to detect standstill.		
Note:	The filter time is effective only if the function is enabled (p9300/p9500 Bit 16 = 1). The parameter is included in the data cross-check of the two monitoring channels. SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)		
p9346	SI Motion SSM velocity limit (Motor Module) / SI Mtn SSM v_limMM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000000.00 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 20.00 [mm/min]
Description:	Sets the velocity limit for the SSM feedback signal to detect standstill (n < nx). When this limit value is undershot, the signal "SSM feedback signal active" is set. If a value of 0 is entered in p9368/p9568, the value of parameter p9346/p9546 applies also for the safe acceleration monitor SBR.		
Dependency:	Refer to: p9546		
Caution:	The function "Safe Acceleration Monitor" (SBR) is switched out after the selected threshold value is undershot.		
			
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SBR: Safe Acceleration Monitor SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)		

p9346 SI Motion SSM velocity limit (Motor Module) / SI Mtn SSM v_limMM			
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 1000000.00 [rpm]	Factory setting 20.00 [rpm]
Description:	Sets the velocity limit for the SSM feedback signal to detect standstill ($n < nx$). When this limit value is undershot, the signal "SSM feedback signal active" is set. If a value of 0 is entered in p9368/p9568, the value of parameter p9346/p9546 applies also for the safe acceleration monitor SBR.		
Dependency:	Refer to: p9546		
Caution:	The function "Safe Acceleration Monitor" (SBR) is switched out after the selected threshold value is undershot.		
			
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SBR: Safe Acceleration Monitor SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)		

p9347 SI Motion SSM velocity hysteresis (Motor Module) / SI Mtn SSM Hyst MM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0010 [mm/min]	Max 500.0000 [mm/min]	Factory setting 10.0000 [mm/min]
Description:	Sets the velocity hysteresis for the SSM feedback signal to detect standstill ($n < nx$).		
Dependency:	Refer to: C01711		
Note:	The velocity hysteresis is effective only if the function is enabled (p9300/p9500 Bit 16 = 1). The parameter is included in the data cross-check of the two monitoring channels. SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)		

p9347 SI Motion SSM velocity hysteresis (Motor Module) / SI Mtn SSM Hyst MM			
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0010 [rpm]	Max 500.0000 [rpm]	Factory setting 10.0000 [rpm]
Description:	Sets the velocity hysteresis for the SSM feedback signal to detect standstill ($n < nx$).		
Dependency:	Refer to: C01711		
Note:	The velocity hysteresis is effective only if the function is enabled (p9300/p9500 Bit 16 = 1). The parameter is included in the data cross-check of the two monitoring channels. SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)		

p9348	SI Motion SBR actual velocity tolerance (Motor Module) / SI Mtn SBR Tol MM		
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [mm/min]	Max 120000.00 [mm/min]	Factory setting 300.00 [mm/min]
Description:	Sets the velocity tolerance for the "Safe Acceleration Monitor".		
Dependency:	Refer to: p9548 Refer to: C01706		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SBR: Safe Acceleration Monitor		
p9348	SI Motion SBR actual velocity tolerance (Motor Module) / SI Mtn SBR Tol MM		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 120000.00 [rpm]	Factory setting 300.00 [rpm]
Description:	Sets the velocity tolerance for the "Safe Acceleration Monitor".		
Dependency:	Refer to: p9548 Refer to: C01706		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SBR: Safe Acceleration Monitor		
p9349	SI Motion slip velocity tolerance (Motor Module) / SI Mtn slip MM		
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [mm/min]	Max 6000.00 [mm/min]	Factory setting 6.00 [mm/min]
Description:	Sets the velocity tolerance that is used for a 2-encoder system in cross-check between the Control Unit and the Motor Module.		
Dependency:	Refer to: p9301, p9342, p9549		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	If the "actual value synchronization" is not enabled (p9301.3 = 0), then the value parameterized in p9342 is used as tolerance in the data cross-check.		
p9349	SI Motion slip velocity tolerance (Motor Module) / SI Mtn slip MM		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 6000.00 [rpm]	Factory setting 6.00 [rpm]
Description:	Sets the velocity tolerance that is used for a 2-encoder system in cross-check between the Control Unit and the Motor Module.		
Dependency:	Refer to: p9301, p9342, p9549		

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.
Note: If the "actual value synchronization" is not enabled (p9301.3 = 0), then the value parameterized in p9342 is used as tolerance in the data cross-check.

p9351 SI Motion SLS changeover delay time (Motor Module) / SI Mtn SLS t MM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [µs]	Max 600000000.00 [µs]	Factory setting 100000.00 [µs]
Description:	Sets the delay time for the SLS changeover or for the changeover from SLS to SOS for the function "Safely-Limited Speed" (SLS). When transitioning from a higher to a lower safely-limited velocity/speed stage or to the safe operating stop (SOS), within this delay time, the "old" velocity stage remains active. Even if SLS or SOS is activated from non safety-related operation, then this delay is still applied.		
Dependency:	Refer to: p9551		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SLS: Safely Limited Speed SOS: Safe Operating Stop		

p9352 SI Motion transition time STOP C to SOS (Motor Module) / SI Mtn t C->SOS MM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [µs]	Max 600000000.00 [µs]	Factory setting 100000.00 [µs]
Description:	Sets the transition time from STOP C to "Safe Operating Stop" (SOS).		
Dependency:	Refer to: p9552		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SOS: Safe Operational Stop		

p9353 SI Motion transition time STOP D to SOS (Motor Module) / SI Mtn t D->SOS MM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [µs]	Max 600000000.00 [µs]	Factory setting 100000.00 [µs]
Description:	Sets the transition time from STOP D to "Safe Operating Stop" (SOS).		
Dependency:	Refer to: p9553		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SOS: Safe Operating Stop		

p9355 SI Motion transition time STOP F to STOP B (Motor Module) / SI Mtn t F->B MM

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [μs]	Max 600000000.00 [μs]	Factory setting 0.00 [μs]
Description:	Sets the transition time from STOP F to STOP B.		
Dependency:	Refer to: C01711		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		

p9356 SI Motion pulse suppression delay time (Motor Module) / SI Mtn IL t_del MM

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [μs]	Max 600000000.00 [μs]	Factory setting 100000.00 [μs]
Description:	Sets the delay time for the safe pulse suppression after STOP B / SS1. In the case of encoderless motion monitoring functions (p9506/p9306 = 1), the parameter has no effect.		
Dependency:	Refer to: p9360, p9556 Refer to: C01701		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SS1: Safe Stop 1		

p9357 SI Motion pulse suppression test time (Motor Module) / SI Mtn IL t MM

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [μs]	Max 10000000.00 [μs]	Factory setting 100000.00 [μs]
Description:	Sets the time after which the pulses must have been suppressed when initiating the test stop.		
Dependency:	Refer to: p9557 Refer to: C01798		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		

p9358 SI Motion acceptance test mode time limit (Motor Module) / SI Mtn acc t MM

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 5000000.00 [μs]	Max 100000000.00 [μs]	Factory setting 40000000.00 [μs]
Description:	Sets the maximum time for the acceptance test mode. If the acceptance test mode takes longer than the selected time limit, then the mode is automatically terminated.		
Dependency:	Refer to: p9558 Refer to: C01799		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		

p9360	SI Motion pulse suppression shutdown velocity (Motor Module) / SI Mtn IL v_shutMM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 6000.00 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [mm/min]
Description:	Sets the shutdown velocity for pulse suppression. Below this velocity "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A). In the case of encoderless motion monitoring functions, the parameter must be > 0 (recommended value: 10).		
Dependency:	Refer to: p9356, p9560		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SS1: Safe Stop 1		
p9360	SI Motion pulse suppression shutdown speed (Motor Module) / SI Mtn IL n_shutMM		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [rpm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 6000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [rpm]
Description:	Sets the shutdown speed for the pulse suppression. Below this speed "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A).		
Dependency:	Refer to: p9356, p9560		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SS1: Safe Stop 1		
p9363[0...3]	SI Motion SLS stop response (Motor Module) / SI Mtn SLS Stop MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 14	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2
Description:	Sets the stop response for the function "safely reduced speed" (SLS). These settings apply to the individual limit values for SLS. In the case of encoderless motion monitoring (p9306 = 1), only a value of 0 or 1 is permitted.		
Value:	0: STOP A 1: STOP B 2: STOP C 3: STOP D 4: STOP E 10: STOP A with delayed pulse suppression when the bus fails 11: STOP B with delayed pulse suppression when the bus fails 12: STOP C with delayed pulse suppression when the bus fails 13: STOP D with delayed pulse suppression when the bus fails 14: STOP E with delayed pulse suppression when the bus fails		
Index:	[0] = Limit value SLS1 [1] = Limit value SLS2 [2] = Limit value SLS3 [3] = Limit value SLP4		
Dependency:	Refer to: p9331, p9380, p9563		

Notice: This parameter is overwritten by the copy function of the safety functions integrated in the drive.

Values 10 to 14 are being prepared and are presently ineffective.

Note: SLS: Safely-Limited Speed / SG: Safely reduced speed

p9368 SI Motion SBR velocity limit (Motor Module) / SI Mtn SBR v_limMM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [mm/min]	Max 1000.00 [mm/min]	Factory setting 0.00 [mm/min]
Description:	Sets the velocity limit for the "SBR" function. SBR is deactivated once the set velocity limit has been undershot.		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SBR: Safe Acceleration Monitor SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) For p9568 = p9368 = 0, the following applies: The value in p9546/p9346 (SSM) is applied as the velocity limit for SBR.		

p9368 SI Motion SBR velocity limit (Motor Module) / SI Mtn SBR v_limMM			
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 1000.00 [rpm]	Factory setting 0.00 [rpm]
Description:	Sets the velocity limit for the "SBR" function. SBR is deactivated once the set velocity limit has been undershot.		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive.		
Note:	SBR: Safe Acceleration Monitor SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) For p9568 = p9368 = 0, the following applies: The value in p9546/p9346 (SSM) is applied as the velocity limit for SBR.		

p9370 SI Motion acceptance test mode (Motor Module) / SI Mtn acc_mod MM			
SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0000 hex	Max 00AC hex	Factory setting 0000 hex
Description:	Setting to select and deselect the acceptance test mode.		
Value:	0: [00 hex] Deselect the acceptance test mode 172: [AC hex] Select the acceptance test mode		
Dependency:	Refer to: p9358, r9371 Refer to: C01799		

p9371	SI Motion acceptance test status (Motor Module) / SI Mtn acc_stat MM		
SERVO, VECTOR	Can be changed: - Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max 00AC hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the status of the acceptance test mode.		
Value:	0: [00 hex] Acc_mode inactive 12: [0C hex] Acc_mode not possible due to POWER ON fault 13: [0D hex] Acc_mode not possible due to incorrect ID in p9370 15: [0F hex] Acc_mode not possible due to expired Acc_timer 172: [AC hex] Acc_mode active		
Dependency:	Refer to: p9358, p9370 Refer to: C01799		
p9380	SI Motion pulse suppression delay bus failure (Motor Module) / SI Mtn t to IL MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 800000.00 [µs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [µs]
Description:	Sets the delay time after which the pulses are safely suppressed after a bus failure.		
Dependency:	Refer to: p9363		
Notice:	This parameter is overwritten by the copy function of the safety functions integrated in the drive. The parameter is being prepared and is presently ineffective.		
p9381	SI Motion brake ramp reference value (Motor Module) / SI Mtn ramp ref MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 600.0000 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 24000.0000 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1500.0000 [mm/min]
Description:	Sets the reference value to define the brake ramp. The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).		
Dependency:	Refer to: p9382, p9383		
p9381	SI Motion brake ramp reference value (Motor Module) / SI Mtn ramp ref MM		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 600.0000 [rpm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 24000.0000 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1500.0000 [rpm]
Description:	Sets the reference value to define the brake ramp. The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).		
Dependency:	Refer to: p9382, p9383		

p9382	SI Motion brake ramp delay time (Motor Module) / SI Mtn rp t_del MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 10000.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 99000000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 250000.00 [µs]
Description:	Sets the delay time for monitoring the brake ramp. Monitoring of the brake ramp starts once the delay time has elapsed.		
Dependency:	Refer to: p9381, p9383		
p9383	SI Motion brake ramp monitoring time (Motor Module) / SI Mtn rp t_mon MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 500.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10000.00 [ms]
Description:	Sets the monitoring time to define the brake ramp. The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).		
Dependency:	Refer to: p9381, p9382		
p9387	SI Motion act val sensing encoderless filter time (Motor Module) / SI Mtn EL filt MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100000.00 [µs]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 25000.00 [µs]
Description:	Sets the filter time for smoothing the actual value with encoderless actual value sensing.		
Note:	This parameter is only effective for encoderless actual value sensing (p9306/p9506 = 1).		
p9388	Minimum current actual value sensing encoderless (Motor Module) / SI Mtn I_min EL MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.00 [%]
Description:	Sets the minimum current for encoderless actual value sensing. Reducing this percentage value can adversely affect actual value sensing. - The value must be increased if C30711 has occurred with message value 1042. - The value must be decreased if C30711 has occurred with message value 1041.		
Dependency:	Refer to: C30711		
Note:	This parameter is only effective for encoderless actual value sensing (p9306/p9506 = 1).		

p9389	SI Motion voltage tolerance acceleration (Motor Module) / SI Mtn V tol MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 10.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the voltage tolerance for suppressing acceleration peaks. Increasing this percentage value means that voltage peaks will need to have a higher amplitude during acceleration procedures if they are not to affect actual value sensing. - The value must be increased if C30711 has occurred with message value 1042. - The value must be decreased if acceleration procedures have led to an excessive safety actual velocity.		
Dependency:	Refer to: C30711		
Note:	This parameter is only effective for encoderless actual value sensing (p9306/p9506 = 1).		
r9390[0...3]	SI Motion version safety motion monitoring (Motor Module) / SI Mtn Version MM		
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the Safety Integrated version for the safety motion monitoring functions on the Motor Module.		
Index:	[0] = Safety Version (major release) [1] = Safety Version (minor release) [2] = Safety Version (baselevel or patch) [3] = Safety Version (hotfix)		
Dependency:	Refer to: r9590, r9770, r9870, r9890		
Note:	Example: r9390[0] = 2, r9390[1] = 60, r9390[2] = 1, r9390[3] = 0 --> SI Motion version V02.60.01.00		
r9398[0...1]	SI Motion actual checksum SI parameters (Motor Module) / SI Mtn act CRC MM		
SERVO, VECTOR	Can be changed: - Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the checksum for the checked Safety Integrated parameters of the motion monitoring function (actual checksum) on the Motor Module.		
Index:	[0] = Checksum over SI parameters for motion monitoring [1] = Checksum over SI parameters with hardware reference		
Dependency:	Refer to: p9399		
Note:	SI: Safety Integrated		

p9399[0...1]	SI Motion reference checksum SI parameters (Motor Module) / SI Mtn ref CRC MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the checksum for the checked Safety Integrated parameters of the motion monitoring functions (reference checksum) on the Motor Module.		
Index:	[0] = Checksum over SI parameters for motion monitoring [1] = Checksum over SI parameters with hardware reference		
Dependency:	Refer to: r9398		
Note:	SI: Safety Integrated		
r9406[0...19]	PS file parameter number parameter not transferred / PS parameter No.		
All objects	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the parameters that were not able to be transferred when reading the parameter back-up files (PS files) from the non-volatile memory (e.g. memory card). r9406[0] = 0 --> All of the parameter values were able to be transferred error-free. r9406[0...x] > 0 --> Displays the parameter number whose value was not able to be completely transferred or for an indexed parameter, for at least 1 index, was not able to be transferred. The first index that is not transferred is displayed in r9407.		
Dependency:	Refer to: r9407, r9408		
Note:	All indices from r9406 to r9408 designate the same parameter. r9406[x] parameter number, parameter not accepted r9407[x] parameter index, parameter not accepted r9408[x] fault code, parameter not accepted		
r9407[0...19]	PS file parameter index parameter not transferred / PS parameter index		
All objects	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 1 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the first index of the parameters that could not be transferred when the parameter backup files (PS files) were read from the non-volatile memory (e.g. memory card). If, from an indexed parameter, at least one index was not able to be transferred, then the parameter number is displayed in r9406[n] and the first index that was not transferred is displayed in r9407[n]. r9406[0] = 0 --> All of the parameter values were able to be transferred error-free. r9406[n] > 0 --> Displays r9407[n] the first index of the parameter number r9406[n] that was not transferred.		
Dependency:	Refer to: r9406, r9408		

Note: All indices from r9406 to r9408 designate the same parameter.
r9406[x] parameter number, parameter not accepted
r9407[x] parameter index, parameter not accepted
r9408[x] fault code, parameter not accepted

r9408[0...19] PS file fault code parameter not transferred / PS fault code

All objects	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Only for internal Siemens service purposes.

Dependency: Refer to: r9406, r9407

Note: All indices from r9406 to r9408 designate the same parameter.
r9406[x] parameter number, parameter not accepted
r9407[x] parameter index, parameter not accepted
r9408[x] fault code, parameter not accepted

r9409 Number of parameters to be saved / Qty par to save

All objects	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the number of modified parameters and those that have still not be saved for this drive object.

Dependency: Refer to: p0971, p0977

Note: The modified parameters that still need to be saved are internally listed in r9410 ... r9419.

r9450[0...29] Reference value change parameter with unsuccessful calculation / Ref_chg par n poss

A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VEC- TOR	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the parameters for which the re-calculation was unsuccessful after an internal system reference value change.

Dependency: Refer to: F07086

r9451[0...29] Units changeover adapted parameters / Unit_chngov par

A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VEC- TOR	Can be changed: -	Calculated: -	Access level: 1
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: -	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the parameters whose parameter would have to be changed during a units changeover.

Dependency: Refer to: F07088

r9481 Number of BICO interconnections / BICO count			
A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VEC- TOR	Can be changed: -	Calculated: -	Access level: 3

Description: Sets the signal source (BO/CO parameter, BICO coded) to search in the signal sinks.
The question is answered:
How often is a connection made to a signal source in the drive object and from which index are these interconnections saved (r9482[0...59], r9483[0...59])?

Dependency: Refer to: r9481, r9482, r9483, r9485, r9486

r9485	BICO interconnections signal source search count / BICO S_src srchQty		
A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VEC- TOR	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of BICO interconnections to the signal sink being searched for. The signal source to be searched is set in p9484 (BICO-coded). The search result is contained in r9482[0...59] and r9483[0...59] and is specified by the count (r9485) and the first index (r9486).		
Dependency:	Refer to: r9481, r9482, r9483, p9484, r9486		
r9486	BICO interconnections signal source search first index / BICO S_src srchIdx		
A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VEC- TOR	Can be changed: - Data type: Unsigned16 P-Group: - Not for motor type: -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0
	Min	Max	Factory setting
	-	-	-
Description:	Displays the first index of the signal source being searched for. The signal source to be searched is set in p9484 (BICO-coded). The search result is contained in r9482[0...59] and r9483[0...59] and is specified by the count (r9485) and the first index (r9486).		
Dependency:	Refer to: r9481, r9482, r9483, p9484, r9485		
r9490	Number of BICO interconnections to other drives / Qty BICO to drive		
All objects	Can be changed: - Data type: Unsigned16 P-Group: Commands Not for motor type: -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
	Min	Max	Factory setting
	-	-	-
Description:	Displays the number of signal sources from this drive to other drives/drive objects (Binector Output/Connector Output, BO/CO).		
Dependency:	Refer to: r9491, r9492, p9493		

r9491[0...9]	BI/CI of BICO interconnections to other drives / BI/CI to drive		
All objects	Can be changed: - Data type: Unsigned32 P-Group: Commands Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the signal receiver list (Binector Input/Connector Input, BI/CI) for the first interconnections between this drive and other drives/drive objects.		
Dependency:	Refer to: r9490, r9492, p9493		
Notice:	A drive cannot be deleted if this list is not empty! Otherwise, another drive would continue to attempt to read a signal from a drive that no longer existed.		
Note:	All indices of r9491 to p9493 designate the same interconnection. r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.		
r9492[0...9]	BO/CO of BICO interconnections to other drives / BO/CO to drive		
All objects	Can be changed: - Data type: Unsigned32 P-Group: Commands Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the signal source list (Binector Output/Connector Output, BO/CO) for the first interconnections between this drive and other drives/drive objects.		
Dependency:	Refer to: r9490, r9491, p9493		
Notice:	A drive cannot be deleted if this list is not empty! Otherwise, another drive would continue to attempt to read a signal from a drive that no longer existed.		
Note:	All indices of r9491 to p9493 designate the same interconnection. r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.		
p9493[0...9]	Reset BICO interconnections to other drives / Reset BICO to drv		
All objects	Can be changed: T Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 15	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 15
Description:	Setting to reset the BICO interconnections to other drives. Each interconnection can be individually reset.		
Value:	0: Set connection to 0 1: Set connection to 1 (100 %) 2: Set connection to factory setting 15: Finished		
Dependency:	Refer to: r9490, r9491, r9492		
Note:	All indices of r9491 to p9493 designate the same interconnection. r9491[x] contains the signal receiver and r9492[x] the matching signal source; p9493[x] can be set to modify the interconnection.		

p9495	BICO behavior to deactivated drive objects / Behav to deact obj		
A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VEC- TOR	Can be changed: T Data type: Integer16 P-Group: - Not for motor type: -	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1
	Min 0	Max 2	Factory setting 0
Description:	Setting for the behavior for BICO interconnections to other non-operational/deactivated drive objects. If this drive object has BICO interconnections to other non-operational or deactivated drive objects as drain, then using these parameters, all of the associated BI/CI parameters of this drive object can be marked and then set to the factory setting or only marked.		
Value:	0: Do not do anything 1: Mark connection 2: Mark connection and then set to the factory setting		
Dependency:	Refer to: p9496, p9497, p9498, p9499 Refer to: A01318, A01507		
Note:	The BI/CI parameters involved are listed in r9498[0...29] (drain). The associated BO/CO parameters are listed in r9499[0...29] (source). However, r9498 and r9499 are only then filled if p9495 is not equal to 0, otherwise they remain empty.		
p9496	Restore BICO to the drive objects that are now activated / Rest BICO act obj

	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 1	Factory setting 0
Description:	Sets the function specification for Safety Integrated.		
Value:	0: Safety with encoder 1: Safety without encoder		
Dependency:	Refer to: C01711		

p9507	SI Motion function specification (Control Unit) / SI Mtn config				
SERVO, VECTOR	Can be changed: C2(95)		Calculated: -	Access level: 3	
	Data type: Unsigned32		Dynamic index: -	Func. diagram: -	
	P-Group: Safety Integrated		Units group: -	Unit selection: -	
	Not for motor type: -		Scaling: -	Expert list: 1	
	Min		Max	Factory setting	
	-		-	0000 bin	
Description:	Function configuration for Safe Motion Monitoring				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Extended alarm acknowledgment	Yes	No	-
	01	Setpoint speed limit for stop F	No	Yes	-
Dependency:	Refer to: C01711				

p9510	SI Motion clock-cycle synchronous PROFIBUS master / SI Mtn sync master		
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 4
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 1	Factory setting 0
Description:	Setting for the clock-cycle synchronous PROFIBUS master. The parameter must be set if the safety-relevant motion monitoring functions integrated in the drive are enabled and there is a clock-cycle synchronous PROFIBUS master. This is, for example, the case when using the following controls: - clock-cycle synchronous control for the motion control (e.g. SIMOTION). - clock-cycle synchronous PROFIsafe master (e.g. SIMATIC S7-400F).		
Value:	0: No clock-cycle synchronous PROFIBUS master 1: Clock-cycle synchronous PROFIBUS master present		
Dependency:	Refer to: C01711, A01796		
Notice:	As of firmware V2.6, the parameter has no effect.		

p9511		SI Motion actual value sensing cycle clock (Control Unit) / SI Mtn act clk CU	
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0000 [ms]	Max 25.0000 [ms]	Factory setting 0.0000 [ms]
Description:	Sets the clock cycle time of the actual value sensing for safe motion monitoring. Setting criteria if the motion monitoring functions are executed with an encoder. - A slower clock cycle time reduces the maximum permissible velocity - however, it ensures a lower load of the Control Unit for safe actual value sensing. - The maximum permissible velocity which, when exceeded, can mean that errors occur during safe actual value sensing, is displayed in r9730. - The isochronous PROFIBUS clock cycle is used as a clock cycle time for actual value sensing with a setting of 0 ms; the setting is 1 ms if isochronous operation is not being used. Setting criteria if the motion monitoring functions are executed without an encoder: - The actual value sensing clock cycle must be set to the same value as the current controller clock cycle (p115).		
Dependency:	Refer to: p0115 Refer to: F01652		
Note:	The parameter is only active for drive-based motion monitoring functions (p9601.2 = 1). The monitoring clock cycle from p9500 must be an integer multiple of this parameter. In the case of motion monitoring functions with encoder, the clock cycle time for actual value sensing must be an integer multiple of the current controller clock cycle and at least 4 times slower than the current controller clock cycle. A factor of at least 8 is recommended. The clock cycle time of the actual value sensing should not be set to more than 8 ms. A change only becomes effective after a POWER ON.		

p9515		SI Motion encoder coarse position value config (Control Unit) / SI Mtn s config CU			
SERVO, VECTOR	Can be changed: C2(95)		Calculated: -		Access level: 3
	Data type: Unsigned32		Dynamic index: -		Func. diagram: -
	P-Group: Safety Integrated		Units group: -		Unit selection: -
	Not for motor type: -		Scaling: -		Expert list: 1
	Min -		Max -		Factory setting 0000 bin
Description:		Sets the encoder configuration for the redundant coarse position value.			
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Incrementer	Yes	No	-
	01	Encoder CRC least significant byte first	Yes	No	-
	02	Redundant coarse position val. most signifi- cant bit left-aligned	Yes	No	-
	16	DRIVE-CLiQ encoder	Yes	No	-
Dependency:		Refer to: r0474, p9315			
Note:		For safe functions that are not enabled (p9501 = 0), the following applies: - p9515 is automatically set the same as p0474 when the system boots. For safety functions that are enabled (p9501 > 0), the following applies: - p9515 is checked to see that it matches p0474.			

p9516	SI Motion encoder configuration safety functions (Control Unit) / SI Mtn enc_cfg CU				
SERVO, VECTOR	Can be changed: C2(95)		Calculated: -		Access level: 3
	Data type: Unsigned16		Dynamic index: -		Func. diagram: -
	P-Group: Safety Integrated		Units group: -		Unit selection: -
	Not for motor type: -		Scaling: -		Expert list: 1
	Min		Max		Factory setting
	-		-		0000 bin
Description:	Sets the configuration for the motor encoder and position actual value.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Motor encoder, rotating/linear	Linear	Rotating:	-
	01	Position actual value, sign change	Yes	No	-
Dependency:	Refer to: p0404, p0410 Refer to: F01671				
Note:	For safe functions that are not enabled (p9501 = 0), the following applies: - p9516.0 is automatically set when booting as for p0410.0. When booting, p9516.1 is automatically set as for p0404.1. For safety functions that are enabled (p9501 > 0), the following applies: - p9516.1 is checked to identify whether it tallies with p0404.1.				
p9517	SI Motion linear scale grid division (Control Unit) / SI Mtn grid CU				
SERVO, VECTOR	Can be changed: C2(95)		Calculated: -		Access level: 3
	Data type: FloatingPoint32		Dynamic index: -		Func. diagram: -
	P-Group: Safety Integrated		Units group: -		Unit selection: -
	Not for motor type: -		Scaling: -		Expert list: 1
	Min		Max		Factory setting
	0.00 [nm]		250000000.00 [nm]		10000.00 [nm]
Description:	Sets the grid division for a linear motor encoder.				
Dependency:	Refer to: p0407, p9516 Refer to: F01671				
Note:	For safety functions that have not been enabled (p9501 = 0), the following applies: When booting p9517 is automatically set the same as p0407. For safety functions that are enabled (p9501 > 0), the following applies: p9517 is checked whether it coincides with p0407.				
p9518	SI Motion encoder pulses per revolution (Control Unit) / SI Mtn puls/rev CU				
SERVO, VECTOR	Can be changed: C2(95)		Calculated: -		Access level: 3
	Data type: Unsigned32		Dynamic index: -		Func. diagram: -
	P-Group: Safety Integrated		Units group: -		Unit selection: -
	Not for motor type: -		Scaling: -		Expert list: 1
	Min		Max		Factory setting
	0		100000		2048
Description:	Sets the number of encoder pulses per revolution for rotary motor encoders.				
Dependency:	Refer to: p0408, p9516 Refer to: F01671				
Note:	For safety functions that have not been enabled (p9501 = 0), the following applies: When booting, p9518 is automatically set the same as p0408. For safety functions that are enabled (p9501 > 0), the following applies: p9518 is checked whether it coincides with p0408.				

p9519	SI Motion fine resolution G1_XIST1 (Control Unit) / SI Mtn G1_XIST1 CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 2	Calculated: - Dynamic index: - Units group: - Scaling: - Max 18	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 11
Description:	Sets the fine resolution for G1_XIST1 in bits.		
Dependency:	Refer to: p0418 Refer to: F01671		
Note:	For safety functions that have not been enabled (p9501 = 0), the following applies: When booting, p9519 is automatically set the same as p0418. For safety functions that are enabled (p9501 > 0), the following applies: p9519 is checked whether it coincides with p0418. G1_XIST1: Encoder 1 position actual value 1 (PROFIdrive)		
p9520	SI Motion spindle pitch (Control Unit) / SI Mtn Sp_pitch CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.1000 [mm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 8388.0000 [mm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.0000 [mm]
Description:	Sets the gear ratio between the encoder and load in mm/revolution for a linear axis with rotary encoder.		
Notice:	The fourth decimal point can be rounded-off depending on the size of the entered number (from three places before the decimal point).		
p9521[0...7]	SI Motion gearbox enc (motor)/load denominator (Control Unit) / SI Mtn gear denom		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2147000000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the denominator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load. It is not possible to change over the gearbox stages. Gearbox stage 0 is always active.		
Index:	[0] = Gearbox 1 [1] = Gearbox 2 [2] = Gearbox 3 [3] = Gearbox 4 [4] = Gearbox 5 [5] = Gearbox 6 [6] = Gearbox 7 [7] = Gearbox 8		
Dependency:	Refer to: p9522		

p9522[0...7]	SI Motion gearbox encoder (motor)/load numerator (Control Unit) / SI Mtn gear numer		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2147000000	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the numerator for the gearbox between the encoder (or motor in the case of encoderless monitoring functions) and the load. It is not possible to change over the gearbox stages. Gearbox stage 0 is always active.		
Index:	[0] = Gearbox 1 [1] = Gearbox 2 [2] = Gearbox 3 [3] = Gearbox 4 [4] = Gearbox 5 [5] = Gearbox 6 [6] = Gearbox 7 [7] = Gearbox 8		
Dependency:	Refer to: p9521		
Note:	In the case of encoderless monitoring functions (p9506), the pole pair number must be multiplied by the numerator of the gearbox ratio. Example: Gearbox ratio 1:4, pole pair number (r0313) = 2 --> p9521 = 1, p9522 = 8 (4*2)		
p9523	SI Motion redundant coarse pos. value valid bits (Control Unit) / Valid bits CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 16	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 9
Description:	Sets the number of valid bits of the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.		
Dependency:	Refer to: r0470, p9323		
Note:	For safe functions that are not enabled (p9501 = 0), the following applies: - p9523 is automatically set the same as r0470 when the system boots. For safety functions that are enabled (p9501 > 0), the following applies: - p9523 is checked to see that it matches r0470.		
p9524	SI Motion Redundant coarse pos. value fine resolution bits (CU) / SI Mtn fine bit CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min -16	Calculated: - Dynamic index: - Units group: - Scaling: - Max 16	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -2
Description:	Sets the number of valid bits for the fine resolution of the redundant coarse position value. The encoder that is used for the safe motion monitoring functions on the Control Unit must be parameterized in this parameter.		
Dependency:	Refer to: r0471, p9324		

Note: For safe functions that are not enabled (p9501 = 0), the following applies:
 - p9524 is automatically set the same as r0471 when the system boots.
 For safety functions that are enabled (p9501 > 0), the following applies:
 - p9524 is checked to see that it matches r0471.

p9525 SI Motion Redundant coarse pos. value relevant bits (CU) / Relevant bits CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 16	Factory setting 16

Description: Sets the number of relevant bits for the redundant coarse position value.

Dependency: Refer to: p0414, r0472, p9325

Note: For safe functions that are not enabled (p9501 = 0), the following applies:
 - p9525 is automatically set the same as r0472 when the system boots.
 For safety functions that are enabled (p9501 > 0), the following applies:
 - p9525 is checked to see that it matches r0472.

p9526 SI Motion encoder assignment second channel / SI Mtn enc chan 2

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 1	Max 3	Factory setting 1

Description: Sets the number of the encoder that the second channel (control, Motor Module) uses for safe motion monitoring functions.

Dependency: For the safe motion monitoring functions, the redundant safety position actual value sensing must be activated in the appropriate encoder data set (p0430.19 = 1).
 Refer to: p0187, p0188, p0189, p0430

Note: For p9526 = 1, the encoder for the closed-loop speed control is used for the second channel of the motion monitoring functions (1-encoder system).
 A change only becomes effective after a POWER ON.

p9529 SI Motion Gx_XIST1 Safe most significant bit (CU) / Gx_XIST1 MSB CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 31	Factory setting 14

Description: Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.

Dependency: Refer to: p0415, r0475, p9329

Note: For safe functions that are not enabled (p9501 = 0), the following applies:
 - p9529 is automatically set the same as r0475 when the system boots.
 For safety functions that are enabled (p9501 > 0), the following applies:
 - p9529 is checked to see that it matches r0475.
 MSB: Most Significant Bit

p9530	SI Motion standstill tolerance (Control Unit) / SI Mtn standst_tol		
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -

	Min 0.00 [mm/min]	Max 1000000.00 [mm/min]	Factory setting 2000.00 [mm/min]
Description:	Sets the limit values for the function "Safely-Limited Speed" (SLS).		
Index:	[0] = Limit value SLS1 [1] = Limit value SLS2 [2] = Limit value SLS3 [3] = Limit value SLP4		
Dependency:	Refer to: p9532, p9561, p9563 Refer to: C01714		
Note:	SLS: Safely-Limited Speed / SG: Safely reduced speed		

p9531[0...3]	SI Motion SLS (SG) limit values (Control Unit) / SI Mtn SLS lim CU		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 1000000.00 [rpm]	Factory setting 2000.00 [rpm]
Description:	Sets the limit values for the function "Safely-Limited Speed" (SLS).		
Index:	[0] = Limit value SLS1 [1] = Limit value SLS2 [2] = Limit value SLS3 [3] = Limit value SLP4		

Dependency: Refer to: p9532, p9561, p9563
Refer to: C01714

Note: SLS: Safely-Limited Speed / SG: Safely reduced speed

p9532[0...15]		SI Motion SLS (SG) override factor (Control Unit) / SI Mtn SLS over	
SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [%]	Max 100.000 [%]	Factory setting 100.000 [%]
Description:	Sets the override factor for the limit value for SLS2 and SLS4 for the function "Safely-Limited Speed" (SLS).		
Index:	[0] = SLS (SG) override factor 0 [1] = SLS (SG) override factor 1 [2] = SLS (SG) override factor 2 [3] = SLS (SG) override factor 3 [4] = SLS (SG) override factor 4 [5] = SLS (SG) override factor 5 [6] = SLS (SG) override factor 6 [7] = SLS (SG) override factor 7 [8] = SLS (SG) override factor 8 [9] = SLS (SG) override factor 9 [10] = SLS (SG) override factor 10 [11] = SLS (SG) override factor 11 [12] = SLS (SG) override factor 12 [13] = SLS (SG) override factor 13 [14] = SLS (SG) override factor 14 [15] = SLS (SG) override factor 15		
Dependency:	Refer to: p9501, p9531		
Note:	The actual override factor for SLS2 and SLS4 is selected using the safety-relevant inputs (SGE). SLS: Safely-Limited Speed / SG: Safely reduced speed		

p9533		SI Motion SLS setpoint velocity limiting (Control Unit) / SI Mtn SLS set_lim	
SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.000 [%]	Max 100.000 [%]	Factory setting 80.000 [%]
Description:	This is an evaluation factor to define the setpoint limit from the selected actual speed limit. The active SLS limit value is evaluated with this factor and is made available as setpoint limit in r9733: r9733 = p9533 * p9531[0...3]		
Dependency:	This parameter only has to be parameterized for the motion monitoring functions integrated in the drive (p9601.2 = 1) Refer to: p9501, p9531, p9601		
Note:	The active actual speed limit is selected via safety-relevant inputs (SGE). When selecting SOS or a STOP A ... D, setpoint 0 is specified in r9733. SLS: Safely-Limited Speed		

p9534[0...1] SI Motion SLP (SE) upper limit values (Control Unit) / SI Mtn SLP up lim			
SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -2147000.000 [mm]	Max 2147000.000 [mm]	Factory setting 100000.000 [mm]
Description:	Sets the upper limit for the function "Safely-Limited Position" (SLP).		
Index:	[0] = Limit value SLP1 (SE1) [1] = Limit value SLP2 (SE2)		
Dependency:	Refer to: p9501, p9535, p9562		
Note:	For the setting of these limit values, the following applies: p9534 > p9535 A change only becomes effective after a POWER ON. SLP: Safely-Limited Position / SE: Safe software limit switches		

p9534[0...1] SI Motion SLP (SE) upper limit values (Control Unit) / SI Mtn SLP up lim			
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -

Description:

Assigns the individual cams to the maximum of 4 cam tracks and defines the numerical value for the SGA "cam range".

p9538[0...29] = CBA dec

C = Assignment of the cam to the cam track.

Valid values are 1, 2, 3, 4.

BA = Numerical value for the SGA "cam range".

If the position lies in the range of this cam, the value BA is signaled to the safety-relevant logic via the SGA "cam range" of the cam track set using C.

Valid values are 0 ... 14. Each numerical value may only be used once for each cam track.

Examples:

p9538[0] = 207

Cam 1 (index 0) is assigned cam track 2. If the position lies within the range of this cam, a value of 7 is entered in the SGA "cam range" of the second cam track.

p9538[5] = 100

Cam 6 (index 5) is assigned cam track 1. If the position lies within the range of this cam, a value of 0 is entered in the SGA "cam range" of the first cam track.

p9544	SI Motion actual value comparison tolerance (referencing) (CU) / SI Mtn ref tol		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0000 [°]	Max 36.0000 [°]	Factory setting 0.0100 [°]
Description:	Sets the tolerance to check the actual values after referencing (incremental encoder) or when powering up (absolute encoder).		
Dependency:	Refer to: C01711		
Note:	A change only becomes effective after a POWER ON.		

p9545 SI Motion SSM (SGA n < nx) filter time (Control Unit) / SI Mtn SSM filt CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 100.00 [ms]	Factory setting 0.00 [ms]

Description: Sets the filter time for the SSM feedback signal to detect standstill.

Note: The filter time is effective only if the function is enabled (p9300/p9500 Bit 16 = 1).
The parameter is included in the data cross-check of the two monitoring channels.
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9546 SI Motion SSM (SGA n < nx) velocity limit (CU) / SI Mtn SSM v_limCU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [mm/min]	Max 1000000.00 [mm/min]	Factory setting 20.00 [mm/min]

Description: Sets the velocity limit for the SSM feedback signal to detect standstill (n < nx).
When this limit value is undershot, the signal "SSM feedback signal active" (SGA n < n_x) is set.
If a value of 0 is entered in p9368/p9568, the value of parameter p9346/p9546 also applies for the safe acceleration monitor SBR.
Caution: The function "Safe Acceleration Monitor" (SBR) is switched out after the selected threshold value is undershot.

Note: F-DO: Failsafe Digital Output / SGA: Safety-related output
SBR: Safe Acceleration Monitor
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) / SGA n < nx: Safety-related output n < nx

p9546 SI Motion SSM (SGA n < nx) velocity limit (CU) / SI Mtn SSM v_limCU

SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 1000000.00 [rpm]	Factory setting 20.00 [rpm]

Description: Sets the velocity limit for the SSM feedback signal to detect standstill (n < nx).
When this limit value is undershot, the signal "SSM feedback signal active" (SGA n < n_x) is set.
If a value of 0 is entered in p9368/p9568, the value of parameter p9346/p9546 also applies for the safe acceleration monitor SBR.
Caution: The function "Safe Acceleration Monitor" (SBR) is switched out after the selected threshold value is undershot.

Note: F-DO: Failsafe Digital Output / SGA: Safety-related output
SBR: Safe Acceleration Monitor
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) / SGA n < nx: Safety-related output n < nx

p9547 SI Motion SSM (SGA n < nx) velocity hysteresis (CU) / SI Mtn SSM hyst CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0010 [mm/min]	Max 500.0000 [mm/min]	Factory setting 10.0000 [mm/min]

Description: Sets the velocity hysteresis for the SSM feedback signal to detect standstill (n < nx).

Dependency: Refer to: C01711

Note: The velocity hysteresis is effective only if the function is enabled (p9300/p9500 Bit 16 = 1).

The parameter is included in the data cross-check of the two monitoring channels.

SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9547 SI Motion SSM (SGA n < nx) velocity hysteresis (CU) / SI Mtn SSM hyst CU

SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.0010 [rpm]	Max 500.0000 [rpm]	Factory setting 10.0000 [rpm]

Description: Sets the velocity hysteresis for the SSM feedback signal to detect standstill (n < nx).

Dependency: Refer to: C01711

Note: The velocity hysteresis is effective only if the function is enabled (p9300/p9500 Bit 16 = 1).

The parameter is included in the data cross-check of the two monitoring channels.

SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)

p9548 SI Motion SBR actual velocity tolerance (Control Unit) / SI Mtn SBR tol

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [mm/min]	Max 120000.00 [mm/min]	Factory setting 300.00 [mm/min]

Description: Sets the velocity tolerance for the "Safe Acceleration Monitor".

Dependency: Refer to: C01706

Note: SBR: Safe Acceleration Monitor

p9548 SI Motion SBR actual velocity tolerance (Control Unit) / SI Mtn SBR tol

SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 120000.00 [rpm]	Factory setting 300.00 [rpm]

Description: Sets the velocity tolerance for the "Safe Acceleration Monitor".

Dependency: Refer to: C01706

Note: SBR: Safe Acceleration Monitor

p9549	SI Motion slip velocity tolerance (Control Unit) / SI Mtn slip tol		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 6000.00 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 6.00 [mm/min]
Description:	Sets the velocity tolerance that is used for a 2-encoder system in crosswise comparison between the two monitoring channels.		
Dependency:	Refer to: p9501, p9542		
Note:	If the "actual value synchronization" is not enabled (p9501.3 = 0), then the value parameterized in p9542 is used as tolerance in the data cross-check.		
p9549	SI Motion slip velocity tolerance (Control Unit) / SI Mtn slip tol		
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [rpm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 6000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 6.00 [rpm]
Description:	Sets the velocity tolerance that is used for a 2-encoder system in crosswise comparison between the two monitoring channels.		
Dependency:	Refer to: p9501, p9542		
Note:	If the "actual value synchronization" is not enabled (p9501.3 = 0), then the value parameterized in p9542 is used as tolerance in the data cross-check.		
p9550	SI Motion SGE changeover tolerance time (Control Unit) / SI Mtn SGE_chg tol		
SERVO, VECTOR	Can be changed: U, T Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10000.00 [ms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the tolerance time for the changeover of the safety-related inputs (SGE).		
p9551	SI Motion SLS (SG) changeover delay time (Control Unit) / SI Mtn SLS t CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 600000.00 [ms]	Access level: 3 Func. diagram: 2825 Unit selection: - Expert list: 1 Factory setting 100.00 [ms]
Description:	Sets the delay time for the SLS changeover or for the changeover from SLS to SOS for the function "Safely-Limited Speed" (SLS). When transitioning from a higher to a lower safely-limited velocity/speed stage or to the safe operating stop (SOS), within this delay time, the "old" velocity stage remains active. Even if SLS or SOS is activated from non safety-related operation, then this delay is still applied.		
Note:	SLS: Safely-Limited Speed / SG: Safely reduced speed SOS: Safe Operating Stop / SBH: Safe operating stop		

p9552 SI Motion transition time STOP C to SOS (SBH) (Control Unit) / SI Mtn t C->SOS CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 600000.00 [ms]	Factory setting 100.00 [ms]
Description: Sets the transition time from STOP C to "Safe Operating Stop" (SOS).			
Note: SOS: Safe Operating Stop / SBH: Safe operating stop			

p9553 SI Motion transition time STOP D to SOS (SBH) (Control Unit) / SI Mtn t D->SOS CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 600000.00 [ms]	Factory setting 100.00 [ms]
Description: Sets the transition time from STOP D to "Safe Operating Stop" (SOS).			
Note: SOS: Safe Operating Stop / SBH: Safe operating stop			

p9554 SI Motion transition time STOP E to SOS (SBH) (Control Unit) / SI Mtn time E->SOS

SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 600000.00 [ms]	Factory setting 100.00 [ms]
Description: Sets the transition time from STOP E to "Safe Operating Stop" (SOS).			
Note: SOS: Safe Operating Stop / SBH: Safe operating stop			

p9555 SI Motion transition time STOP F to STOP B (Control Unit) / SI Mtn t F->B CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 600000.00 [ms]	Factory setting 0.00 [ms]
Description: Sets the transition time from STOP F to STOP B.			
Dependency: Refer to: C01711			

p9556 SI Motion pulse suppression delay time (Control Unit) / SI Mtn IL t_del CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2825
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 600000.00 [ms]	Factory setting 100.00 [ms]
Description: Sets the delay time for the safe pulse suppression after STOP B. In the case of encoderless motion monitoring functions (p9506/p9306 = 1), the parameter has no effect.			
Dependency: Refer to: p9560 Refer to: C01701			

p9557	SI Motion pulse suppression test time (Control Unit) / SI Mtn IL t_test		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 10000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [ms]
Description:	Sets the time after which the pulses must have been suppressed when initiating the test stop.		
Dependency:	Refer to: C01798		
Note:	A change only becomes effective after a POWER ON.		
p9558	SI Motion acceptance test mode time limit (Control Unit) / SI Mtn acc_test t		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 5000.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 40000.00 [ms]
Description:	Sets the maximum time for the acceptance test mode.		
	If the acceptance test mode takes longer than the selected time limit, then the mode is automatically terminated.		
Dependency:	Refer to: C01799		
p9559	SI Motion forced checking procedure timer (Control Unit) / SI Mtn dyn timer		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [h]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 9000.00 [h]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 8.00 [h]
Description:	Sets the time to carry out the forced checking procedure and test the safety motion monitoring functions integrated in the drives.		
	Within the parameterized time, the safety functions must have been tested at least once (including deselection of the "STO" function).		
	This monitoring time is reset each time the test is carried out.		
	The signal source to initiate the forced checking procedure is set in p9705.		
Dependency:	Refer to: p9705		
	Refer to: A01697, C01798		
Note:	STO: Safe Torque Off		
p9560	SI Motion pulse suppression shutdown velocity (Control Unit) / SI Mtn IL v_shutCU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 6000.00 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [mm/min]
Description:	Sets the shutdown velocity for pulse suppression.		
	Below this velocity "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A).		
	In the case of encoderless motion monitoring functions, the parameter must be > 0 (recommended value: 10).		
Dependency:	Refer to: p9556		

p9560	SI Motion pulse suppression shutdown speed (Control Unit) / SI Mtn IL n_shutCU		
SERVO (Lin, Safety rot), VECTOR (Safety rot)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [rpm]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 6000.00 [rpm]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [rpm]
Description:	Sets the shutdown speed for the pulse suppression. Below this speed "standstill" is assumed and for STOP B, the pulses are suppressed by changing to STOP A).		
Dependency:	Refer to: p9556		
p9560	SI Motion pulse suppression shutdown velocity (Control Unit) / SI Mtn IL v_shutd		
SERVO (Lin)	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 6000.00 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [mm/min]
Description:	Sets the shutdown velocity for pulse suppression. Below this velocity "standstill" is assumed and for STOP B / SS1, the pulses are suppressed (by changing to STOP A). In the case of encoderless motion monitoring functions, the parameter must be > 0 (recommended value: 10).		
Dependency:	Refer to: p9556		
p9561	SI Motion SLS (SG) stop response (Control Unit) / SI Mtn SLS resp		
SERVO, VECTOR	Can be changed: U, T Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 14	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 5
Description:	Sets the stop response for the function "Safely-Limited Speed" (SLS). This setting applies for all SLS limit values. An input value of less than 5 signifies personnel protection, from 10 and upwards, machine protection.		
Value:	0: STOP A 1: STOP B 2: STOP C 3: STOP D 4: STOP E 5: Sets the stop response via p9563 (SLS-specific) 10: STOP A with delayed pulse suppression when the bus fails 11: STOP B with delayed pulse suppression when the bus fails 12: STOP C with delayed pulse suppression when the bus fails 13: STOP D with delayed pulse suppression when the bus fails 14: STOP E with delayed pulse suppression when the bus fails		
Dependency:	Refer to: p9531, p9563, p9580		
Note:	SLS: Safely-Limited Speed / SG: Safely reduced speed		

p9562	SI Motion SLP (SE) stop response (Control Unit) / SI Mtn SLP resp		
SERVO, VECTOR	Can be changed: U, T Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 2	Calculated: - Dynamic index: - Units group: - Scaling: - Max 4	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2
Description:	Sets the stop response for the function "Safely-Limited Position" (SLP).		
Value:	2: STOP C 3: STOP D 4: STOP E		
Dependency:	Refer to: p9534, p9535		
Note:	SLP: Safely-Limited Position / SE: Safe software limit switches		
p9563[0...3]	SI Motion SLS (SG)-specific stop response (Control Unit) / SI Mtn SLS stop		
SERVO, VECTOR	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 14	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 2
Description:	Sets the SLS-specific stop response for the function "Safely-Limited Speed" (SLS). These settings apply to the individual limit values for SLS. In the case of encoderless motion monitoring (p9306 = 1), only a value of 0 or 1 is permitted.		
Value:	0: STOP A 1: STOP B 2: STOP C 3: STOP D 4: STOP E 10: STOP A with delayed pulse suppression when the bus fails 11: STOP B with delayed pulse suppression when the bus fails 12: STOP C with delayed pulse suppression when the bus fails 13: STOP D with delayed pulse suppression when the bus fails 14: STOP E with delayed pulse suppression when the bus fails		
Index:	[0] = Limit value SLS1 [1] = Limit value SLS2 [2] = Limit value SLS3 [3] = Limit value SLP4		
Dependency:	Refer to: p9531, p9561, p9580		
Notice:	Values 10 to 14 are being prepared and are presently ineffective.		
Note:	SLS: Safely-Limited Speed / SG: Safely reduced speed		
p9568	SI Motion SBR velocity limit (Control Unit) / SI MtnSBR v_lim CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [mm/min]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [mm/min]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [mm/min]
Description:	Sets the velocity limit for the "SBR" function. SBR is deactivated once the set velocity limit has been undershot.		

Note: SBR: Safe Acceleration Monitor
SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring)
For p9568 = p9368 = 0, the following applies:
The value in p9546/p9346 (SSM) is applied as the velocity limit for SBR.

p9568 SI Motion SBR velocity limit (Control Unit) / SI MtnSBR v_lim CU			
SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [rpm]	Max 1000.00 [rpm]	Factory setting 0.00 [rpm]
Description:	Sets the velocity limit for the "SBR" function. SBR is deactivated once the set velocity limit has been undershot.		
Note:	SBR: Safe Acceleration Monitor SSM: Safe Speed Monitor (safety-relevant feedback signal from the velocity monitoring) For p9568 = p9368 = 0, the following applies: The value in p9546/p9346 (SSM) is applied as the velocity limit for SBR.		

p9570 SI Motion acceptance test mode (Control Unit) / SI Mtn Acc_mode			
SERVO, VECTOR	Can be changed: U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0000 hex	Max 00AC hex	Factory setting 0000 hex
Description:	Setting to select and deselect the acceptance test mode.		
Value:	0: [00 hex] Deselect the acceptance test mode 172: [AC hex] Select the acceptance test mode		
Dependency:	Refer to: p9558, r9571, p9601 Refer to: C01799		
Note:	Acceptance test mode can only be selected if Safety Extended Functions are enabled (p9601/9801).		

r9571 SI Motion acceptance test status (Control Unit) / SI Mtn acc_status			
SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0000 hex	Max 00AC hex	Factory setting -
Description:	Displays the status of the acceptance test mode.		
Value:	0: [00 hex] Acc_mode inactive 12: [0C hex] Acc_mode not possible due to POWER ON fault 13: [0D hex] Acc_mode not possible due to incorrect ID in p9570 15: [0F hex] Acc_mode not possible due to expired Acc_timer 172: [AC hex] Acc_mode active		
Dependency:	Refer to: p9558, p9570 Refer to: C01799		

p9580 SI Motion pulse suppression delay time after bus failure (CU) / SI Mtn t to IL

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 4
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 800.00 [ms]	Factory setting 0.00 [ms]

Description: Sets the delay time after which the pulses are safely suppressed after a bus failure.

Dependency: Refer to: p9561, p9563

p9581 SI Motion brake ramp reference value (Control Unit) / SI Mtn ramp ref CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 600.0000 [mm/min]	Max 24000.0000 [mm/min]	Factory setting 1500.0000 [mm/min]

Description: Sets the reference value to define the brake ramp.

The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).

Dependency: Refer to: p9582, p9583

p9581 SI Motion brake ramp reference value (Control Unit) / SI Mtn ramp ref CU

SERVO (Safety rot), VECTOR (Safety rot)	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 600.0000 [rpm]	Max 24000.0000 [rpm]	Factory setting 1500.0000 [rpm]

Description: Sets the reference value to define the brake ramp.

The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).

Dependency: Refer to: p9582, p9583

p9582 SI Motion brake ramp delay time (Control Unit) / SI Mtn rp t_del CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 10.00 [ms]	Max 99000.00 [ms]	Factory setting 250.00 [ms]

Description: Sets the delay time for monitoring the brake ramp.

Monitoring of the brake ramp starts once the delay time has elapsed.

Dependency: Refer to: p9581, p9583

p9583	SI Motion brake ramp monitoring time (Control Unit) / SI Mtn rp t_mon CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.50 [s]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.00 [s]
Description:	Sets the monitoring time to define the brake ramp. The rate of rise of the brake ramp depends upon p9581 (reference value) and p9583 (monitoring time).		
Dependency:	Refer to: p9581, p9582		
p9587	SI Motion act val sensing encoderless filter time (Control Unit) / SI Mtn EL filt CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [ms]	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 25.00 [ms]
Description:	Sets the filter time for smoothing the actual value with encoderless actual value sensing.		
Note:	This parameter is only effective for encoderless actual value sensing (p9306/p9506 = 1).		
p9588	SI Motion min current act val sensing encoderless (Control Unit) / SI Mtn I_min EL CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 10.00 [%]
Description:	Sets the minimum current for encoderless actual value sensing. Reducing this percentage value can adversely affect actual value sensing. - The value must be increased if C1711 has occurred with message value 1042. - The value must be decreased if C1711 has occurred with message value 1041.		
Dependency:	Refer to: C01711		
Note:	This parameter is only effective for encoderless actual value sensing (p9306/p9506 = 1).		
p9589	SI Motion voltage tolerance acceleration (Control Unit) / SI Mtn V tol CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 10.00 [%]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1000.00 [%]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 100.00 [%]
Description:	Sets the voltage tolerance for suppressing acceleration peaks. Increasing this percentage value means that voltage peaks will need to have a higher amplitude during acceleration procedures if they are not to affect actual value sensing. - The value must be increased if C1711 has occurred with message value 1042. - The value must be decreased if acceleration procedures have led to an excessive safety actual velocity.		
Dependency:	Refer to: C01711		
Note:	This parameter is only effective for encoderless actual value sensing (p9306/p9506 = 1).		

r9590[0...3]	SI Motion version safety motion monitoring (Control Unit) / SI Mtn version																							
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -																					
Description:	Displays the Safety Integrated version for the safety motion monitoring functions on the Control Unit.																							
Index:	[0] = Safety Version (major release) [1] = Safety Version (minor release) [2] = Safety Version (baselevel or patch) [3] = Safety Version (hotfix)																							
Dependency:	Refer to: r9770, r9870, r9890																							
Note:	Example: r9590[0] = 2, r9590[1] = 60, r9590[2] = 1, r9590[3] = 0 --> SI Motion version V02.60.01.00																							
p9601	SI enable, functions integrated in the drive (Control Unit) / SI enable fct CU																							
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin																					
Description:	Sets the enable signals for safety functions on the Control Unit that are integrated in the drive. Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used: - p9601 = 0: Safety functions integrated in the drive disabled. - p9601 = 1: STO/SS1 enabled via terminals. Permissible if r9771.0 = 1. - p9601 = 4: Motion monitoring functions integrated in the drive enabled via Terminal Module 54F (TM54F) (SINAMICS S120) or via an integrated F-DI/F-DO (SINAMICS S110). Permissible if r9771.5 = 1. - p9601 = 5: Motion monitoring functions integrated in the drive enabled via Terminal Module 54F (TM54F) and STO/SS1 via terminals (SINAMICS S120 only). Permissible if r9771.5 = 1. - p9601 = 8: STO/SS1 enabled via PROFIsafe. Permissible if r9771.6 = 1. - p9601 = 9: STO/SS1 enabled via PROFIsafe and STO/SS1 via terminals. Permissible if r9771.6 = 1. - p9601 = 12: Motion monitoring functions integrated in the drive enabled via PROFIsafe. Permissible if r9771.4 = 1. - p9601 = 13: Motion monitoring functions integrated in the drive enabled via PROFIsafe and STO/SS1 via terminals. Permissible if r9771.4 = 1.																							
Bit field:	<table> <tr> <th>Bit</th><th>Signal name</th><th>1 signal</th><th>0 signal</th><th>FP</th></tr> <tr> <td>00</td><td>STO (SH) via terminals (Control Unit) enable</td><td>Enable</td><td>Inhibit</td><td>2810</td></tr> <tr> <td>02</td><td>Motion monitoring functions integr. in the drive (Control Unit)</td><td>Enable</td><td>Inhibit</td><td>-</td></tr> <tr> <td>03</td><td>PROFIsafe (Control Unit) enable</td><td>Enable</td><td>Inhibit</td><td>-</td></tr> </table>	Bit	Signal name	1 signal	0 signal	FP	00	STO (SH) via terminals (Control Unit) enable	Enable	Inhibit	2810	02	Motion monitoring functions integr. in the drive (Control Unit)	Enable	Inhibit	-	03	PROFIsafe (Control Unit) enable	Enable	Inhibit	-			
Bit	Signal name	1 signal	0 signal	FP																				
00	STO (SH) via terminals (Control Unit) enable	Enable	Inhibit	2810																				
02	Motion monitoring functions integr. in the drive (Control Unit)	Enable	Inhibit	-																				
03	PROFIsafe (Control Unit) enable	Enable	Inhibit	-																				
Dependency:	Refer to: r9771, p9801																							
Note:	CU: Control Unit. STO: Safe Torque Off/SH: Safe standstill. SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN 60204). SI: Safety Integrated. SMM: Safe Motion Monitoring. F-DI: Failsafe Digital Input. F-DO: Failsafe Digital Output. A change only becomes effective after a POWER ON.																							

p9602	SI enable Safe Brake Control (Control Unit) / SI enable SBC CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: 2814 Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the enable signal for the function "Safe Brake Control" (SBC) on the Control Unit.		
Value:	0: Inhibit SBC 1: Enable SBC		
Dependency:	Refer to: p9802		
Note:	The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9601 not equal to 0). It does not make sense to parameterize "no motor holding brake available" and enable "Safe Brake Control" (p1215 = 0, p9602 = p9802 = 1) if there is no motor holding brake. The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical. It is not permissible to parameterize "motor holding brake without feedback signals" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1). CU: Control Unit SBC: Safe Brake Control SI: Safety Integrated		
p9610	SI PROFIsafe address (Control Unit) / SI PROFIsafe CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFE hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the PROFIsafe address of the Control Unit.		
Dependency:	Refer to: p9810		
p9620[0...7]	BI: SI signal source for STO (SH)/SBC/SS1 (Control Unit) / SI S_srcSTO/SS1 CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 / Binary P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 2810 Unit selection: - Expert list: 1 Factory setting [0] 0 [1] 0 [2] 0 [3] 0 [4] 0 [5] 0 [6] 0 [7] 0
Description:	Sets the signal source for the following functions on the Control Unit: STO: Safe Torque Off / SH: Safe standstill SBC: Safe Brake Control SS1: Safe Stop 1 (time monitored)		
Dependency:	Refer to: p9601		

Note: The following signal sources are permitted:

- fixed zero (standard setting).
- digital inputs DI 0 to DI 7 on the Control Unit 320 (CU320).
- digital inputs DI 0 to DI 3 on the Controller Extensions (CX32, NX10, NX15).
- digital inputs DI 0 to DI 3 on the Control Unit 310 (CU310).

It is not permitted to establish an interconnection to a digital input in the simulation mode.

For a parallel circuit configuration of n power units, the following applies:

p9620[0] = Signal source for power unit 1

...

p9620[n-1] = Signal source for power unit n

p9621		BI: SI signal source for SBA (Control Unit) / SI s_src SBA CU	
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 2810
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting 0
Description:	An entry is added, specifying whether and/or via which digital CU input the SBA feedback signal (SBA_DIAG) is to be read in; the parameter can be interconnected as a BICO drain. 0 : No SBC with SBA (default) Bico code: To be parameterized by the user SBA and no DQ CIM: p0722.x CU signal source for DIx where x = { 0,1,2...7 } SBA with DQ CIM: p9872.3 Signal source is permanently interconnected to bit 3		
Dependency:	Refer to: p9601		
Note:	No difference is tolerated for a data cross-check between p9621 and p9821.		

p9622[0...1]		SI SBA relay wait times (Control Unit) / SI SBA WT CU	
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2810
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [ms]	Max 1000.00 [ms]	Factory setting [0] 100.00 [ms] [1] 65.00 [ms]
Description:	The relay-specific minimum wait times (ms) for evaluating the feedback signal contacts have to be taken into account. They differ for the activation and deactivation of one and the same relay.		
Index:	[0] = Relay wait time activation [1] = Relay wait time deactivation		
Dependency:	Refer to: p9850		
Note:	For a data cross-check between p9622 and p9822, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle. The relay-specific minimum wait times (ms) for evaluating the feedback signal contacts are entered. Index 0 : for the ON time (default 100 ms) Index 1 : for the OFF time (default 65 ms)		

p9650	SI SGE changeover tolerance time (Control Unit) / SI SGE_chg tol CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2000.00 [ms]	Access level: 3 Func. diagram: 2810 Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the tolerance time to change over the safety-related inputs (SGE) on the Control Unit. An SGE changeover is not effective simultaneously due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a data cross-check during this tolerance time.		
Dependency:	Refer to: p9850		
Note:	For a data cross-check between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle. SGE: Safety-related input (e.g. STO terminals)		
p9651	SI STO/SBC/SS1 debounce time (Control Unit) / SI STO t_debou CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the CU DI debounce time used to control the SH terminal (see p9620). The debounce time is accepted rounded to whole milliseconds. The debounce time indicates the maximum duration of a fault pulse on the F-DIs, so that there are no negative effects on the SGEs.		
Note:	Example: Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed. Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.		
p9652	SI Safe Stop 1 delay time (Control Unit) / SI Stop 1 t_del CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [s]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 300.00 [s]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [s]
Description:	Sets the delay time of the pulse suppression for the function "Safe Stop 1" (SS1) on the Control Unit to brake along the OFF3 down ramp (p1135).		
Dependency:	Refer to: p1135, p9852		
Note:	For a data cross-check between p9652 and p9852, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle. SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)		

p9658	SI transition time STOP F to STOP A (Control Unit) / SI STOP F->A CU		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 30000.00 [ms]	Access level: 3 Func. diagram: 2802 Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the transition period from STOP F to STOP A on the Control Unit.		
Dependency:	Refer to: r9795, p9858 Refer to: F01611		
Note:	For a data cross-check between p9658 and p9858, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle. STOP F: Defect in a monitoring channel (error in the data cross-check) STOP A: Pulse suppression via the safety shutdown path		
p9659	SI forced checking procedure timer / SI FrcdCkProcTimer		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [h]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 9000.00 [h]	Access level: 3 Func. diagram: 2810 Unit selection: - Expert list: 1 Factory setting 8.00 [h]
Description:	Sets the time to carry out the dynamic update and testing the safety shutdown paths (forced checking procedure). Within the parameterized time, STO must have been deselected at least once. The monitoring time is reset each time that STO is deselected.		
Dependency:	Refer to: A01699		
Note:	STO: Safe Torque Off / SH: Safe standstill		
r9660	SI forced checking procedure remaining time / SI frc chk remain		
SERVO, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min - [h]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [h]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [h]
Description:	Displays the time remaining before dynamization and testing of the safety shutdown paths (forced checking procedure).		
Dependency:	Refer to: A01699		
p9700	SI Motion copy function / SI Mtn copy fct		
SERVO, VECTOR	Can be changed: C2(95), U, T Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max 00D0 hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Setting to start the required copy function. After starting, the appropriate parameters are copied from the Control Unit to the Motor Module. Once copying is complete, the parameter is automatically reset to 0.		

Value: 0: [00 hex] Copy function ended
 29: [1D hex] Start copy function node identifier
 87: [57 hex] Start copy function SI parameters
 208: [D0 hex] Start copy function SI basic parameters

Note: Re value = 57 hex and D0 hex:
 The value can only be set if the safety commissioning mode is set and the Safety Integrated password was entered.
 Re value = D0 hex:
 The following parameters are copied after starting the copy function:
 p9601/p9801, p9602/p9802, p9610/9810, p9650/p9850, p9652/p9852, p9658/p9858

p9700 SI Motion copy function / SI Mtn copy fct

TM54F_MA	Can be changed: C2(95), U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	0057 hex	0000 hex

Description: Setting to start the required copy function.
 After starting, the appropriate parameters are copied from the Control Unit to the Motor Module.
 Once copying is complete, the parameter is automatically reset to 0.

Value: 0: [00 hex] Copy function ended
 29: [1D hex] Start copy function node identifier
 87: [57 hex] Start copy function SI parameters

Note: Re value = 57 hex:
 The value can only be set if the safety commissioning mode is set and the Safety Integrated password was entered.
 SI: Safety Integrated

p9701 Acknowledge SI Motion data / Ackn SI Mtn dat

SERVO, VECTOR	Can be changed: C2(95), U, T	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	00EC hex	0000 hex

Description: Setting to transfer the reference checksums from the associated actual checksums after changes (SI parameters, hardware).
 After transferring the reference checksums, parameters are automatically reset to 0.

Value: 0: [00 hex] Data unchanged
 172: [AC hex] Acknowledge data change complete
 220: [DC hex] Acknowledge SI basic parameter change
 236: [EC hex] Acknowledge hardware CRC

Dependency: Refer to: r9398, p9399, r9728, p9729, r9798, p9799, r9898, p9899

Note: Re value = AC and DC hex:
 These values can only be set if the safety commissioning mode is set and the Safety Integrated password was entered.

p9701	Acknowledge SI Motion data / Ackn SI Mtn dat		
TM54F_MA, TM54F_SL	Can be changed: C2(95), U, T Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max 00EC hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Setting to transfer the reference checksums from the associated actual checksums after changes (SI parameters, hardware). After transferring the reference checksums, parameters are automatically reset to 0.		
Value:	0: [00 hex] Data unchanged 172: [AC hex] Acknowledge data change complete 236: [EC hex] Acknowledge hardware CRC		
Dependency:	Refer to: r9398, p9399, r9728, p9729, r9798, p9799, r9898, p9899		
Note:	Re value = AC hex: These values can only be set if the safety commissioning mode is set and the Safety Integrated password was entered. SI: Safety Integrated

	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Re r9725[0]:
Displays the message value that resulted in the STOP F on the drive.

Value = 0 means:

The Control Unit signaled a STOP F.

Value = 1 ... 999 means:

Number of the incorrect cross-checked data between the Control Unit and second channel.

Value >= 1000 means:

Additional diagnostic values of the drive.

Re r9725[1]:

Displays the value of the Control Unit that resulted in the STOP F.

Re r9725[2]:

Displays the value of the 2nd channel that resulted in the STOP F.

Index:
[0] = DCC error number
[1] = Control Unit DCC act value
[2] = Components DCC act val

Dependency: Refer to: C01711

Note: The significance of the individual values is described in message C01711.

	0	65535	0
Description:	Number of safety messages that have occurred since the last reset.		
Dependency:	The safety message buffer is cleared by resetting the parameter to 0. Refer to: r9744, r9747, r9748, r9749, r9753, r9754, r9755, r9756		
Note:	The parameter is reset to 0 at POWER ON.		

r9753[0...63]	SI message value for float values / SI msg_val float		
SERVO, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Messages Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays additional information about the safety message that has occurred for float values.		
Dependency:	Refer to: r9744, r9747, r9748, r9749, p9752, r9754, r9755, r9756		
r9754[0...63]	SI message time received in days / SI t_msg rcv days		
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the relative system runtime in days when the safety message occurred.		
Dependency:	Refer to: r9744, r9747, r9748, r9749, p9752, r9753, r9755, r9756		
r9755[0...63]	SI message time removed in milliseconds / SI t_msg rem ms		
SERVO, VECTOR	Can be changed: - Data type: Unsigned32 P-Group: Messages Not for motor type: - Min - [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [ms]
Description:	Displays the relative system runtime in milliseconds when the safety message was removed.		
Dependency:	Refer to: r9744, r9747, r9748, r9749, p9752, r9753, r9754, r9756		
r9756[0...63]	SI message time removed in days / SI t_msg rem days		
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Messages Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the relative system runtime in days when the safety message was removed.		
Dependency:	Refer to: r9744, r9747, r9748, r9749, p9752, r9753, r9754, r9755		
p9761	SI password input / SI password inp		
SERVO, VECTOR	Can be changed: C1, T Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: 2800 Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Enters the Safety Integrated password.		
Dependency:	Refer to: F01659		
Note:	It is not permissible to change Safety Integrated parameter settings until the Safety Integrated password has been entered.		

p9762	SI password new / SI password new		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: 2800 Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Enters a new Safety Integrated password.		
Dependency:	A change made to the Safety Integrated password must be acknowledged in the following parameter: Refer to: p9763		
p9763	SI password acknowledgement / SI ackn password		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: 2800 Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Acknowledges the new Safety Integrated password.		
Dependency:	Refer to: p9762		
Note:	The new password entered into p9762 must be re-entered in order to acknowledge. p9762 = p9763 = 0 is automatically set after the new Safety Integrated password has been successfully acknowledged.		
r9765	SI Motion forced check procedure remaining time (Control Unit) / SI Mtn dyn remain		
SERVO, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min - [h]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [h]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [h]
Description:	Displays the time remaining until the next dynamization and testing of the safety motion monitoring functions integrated in the drives. The signal source to initiate the forced checking procedure is parameterized in p9705.		
Dependency:	Refer to: p9705 Refer to: C01798		
r9770[0...3]	SI vers. safety fcts that run indep. in the drive (Control Unit) / SI version Drv CU		
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 2802 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the Safety Integrated version for the safety functions that run independently in the drive on the Control Unit.		
Index:	[0] = Safety Version (major release) [1] = Safety Version (minor release) [2] = Safety Version (baselevel or patch) [3] = Safety Version (hotfix)		
Dependency:	Refer to: r9870, r9890		

Note: Example:
r9770[0] = 2, r9770[1] = 60, r9770[2] = 1, r9770[3] = 0 --> Safety version V02.60.01.00

r9771 SI common functions (Control Unit) / SI common fct CU

SERVO, VECTOR	Can be changed: - Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 2804 Unit selection: - Expert list: 1 Factory setting -
---------------	--	--	--

Description: Displays the Safety Integrated monitoring functions supported on the Control Unit and Motor Module. The Control Unit determines this display.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO supported via terminals	Yes	No	2804
	01	SBC supported	Yes	No	2804
	02	SI Motion supported	Yes	No	2804
	03	SS1 supported	Yes	No	2804
	04	PROFIsafe supported for Extended Functions	Yes	No	-
	05	Drive-based motion monitoring functions supported	Yes	No	-
	06	PROFIsafe supported for Basic Functions	Yes	No	-
	07	Encoderless motion monitoring supported	Yes	No	-
	08	Safe Brake Adapter supported	Yes	No	-
	09	PROFIsafe supported BasicFunctions for parall circuit connection	Yes	No	-

Dependency: Refer to: r9871

Note: CU: Control Unit
SBC: Safe Brake Control
SI: Safety Integrated
SS1: Safe Stop 1
STO: Safe Torque Off / SH: Safe standstill

r9772.0...23 CO/BO: SI status (Control Unit) / SI status CU

SERVO, VECTOR	Can be changed: - Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: 2804 Unit selection: - Expert list: 1 Factory setting -
---------------	--	--	--

Description: Displays the Safety Integrated status on the Control Unit.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO selected on Control Unit	Yes	No	2810
	01	STO active on Control Unit	Yes	No	2810
	02	SS1 delay time active on the Control Unit	Yes	No	2810
	04	SBC requested	Yes	No	2814
	05	SS1 selected on the Control Unit (Basic Functions)	Yes	No	-
	06	SS1 active on the Control Unit (Basic Functions)	Yes	No	-

List of parameters

09	STOP A cannot be acknowledged, active	Yes	No	2802
10	STOP A active	Yes	No	2802
15	STOP F active	Yes	No	2802
16	STO cse: Safety comm. mode	Yes	No	-
17	STO cause selection via terminal (Basic Functions)	Yes	No	-
18	STO cause: selection via SMM	Yes	No	-
19	STO cause actual value missing	Yes	No	-
20	STO cause selection PROFIsafe (Basic Functions)	Yes	No	-
22	SS1 cause selection terminal (Basic Functions)	Yes	No	-
23	SS1 cause selection PROFIsafe (Basic Functions)	Yes	No	-

Dependency: Refer to: r9872

Note: Re bit 00:
When STO is selected, the cause is displayed in bits 16 ... 20.
Re bit 05:
When SS1 is selected, the cause is displayed in bits 22 and 23.
Re bit 18:
When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).
Re bit 19:
With SMM encoderless no actual value sensing is possible on account of OFF2.
With SMM with encoder no actual value sensing is possible on account of parking.
SMM: Safe Motion Monitoring
Re bit 22 and 23:
These bits show via which path the SS1 has been triggered, i.e. what has started the SS1 delay time.
If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.

r9773.0...31 CO/BO: SI status (Control Unit + Motor Module) / SI status CU+MM

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2804
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the Safety Integrated status on the drive (Control Unit + Motor Module).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO selected in drive	Yes	No	2804
	01	STO active in drive	Yes	No	2804
	02	SS1 delay time active in the drive	Yes	No	2804
	04	SBC requested	Yes	No	2804
	05	SS1 selected in the drive (Basic Functions)	Yes	No	-
	06	SS1 active in the drive (Basic Functions)	Yes	No	-
	31	Shutdown paths must be tested	Yes	No	2810

Note: This status is formed from the AND operation of the relevant status of the two monitoring channels.

r9774.0...31 CO/BO: SI status (group STO) / SI stat group STO

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2804
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status for Safety Integrated of the group to which this drive belongs.
These signals are an AND logic operation of the individual status signals of the drives included in this group.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO selected in group	Yes	No	2804
	01	STO active in group	Yes	No	2804
	02	SS1 delay time active in group	Yes	No	-
	04	SBC requested in group	Yes	No	2804
	05	SS1 selected in group (Basic Functions)	Yes	No	-
	06	SS1 active in group (Basic Functions)	Yes	No	-
	31	Shutdown paths of the group must be tested	Yes	No	2804

Dependency: Refer to: p9620, r9773

Notice: If a drive belonging to a group is deactivated via p0105, then the signals in r9774 can no longer be correctly displayed (Remedy: Before deactivating, remove this drive from the group).

Note: A group is formed by appropriately grouping the terminals for the function "Safe Torque Off" (STO).
The status of a group of n drives is, for drives 1 to n - 1 displayed with a delay of one monitoring clock cycle; this is a system-related effect.

r9776 SI Motion diagnostics / SI Mtn diag

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 4
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: The parameter is used for diagnostics.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Safety parameter changed POWER ON required	Yes	No	-

Note: Re bit 00:

The bit indicates whether a change has been made to at least one Safety parameter which will only take effect after a POWER ON.

r9780 SI monitoring clock cycle (Control Unit) / SI monitor_clk CU

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2802
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	- [ms]	- [ms]	- [ms]

Description: Displays the clock cycle time for the Safety Integrated Basic Functions on the Control Unit.

Dependency: Refer to: r9880

r9781[0...1]	SI checksum to check changes (Control Unit) / SI chg chksm CU		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the checksum for tracking changes for Safety Integrated. These are additional checksums that are created to track changes (fingerprint for the "safety logbook" functionality) to safety parameters (that are relevant for checksums).		
Index:	[0] = SI checksum to track functional changes [1] = SI checksum to track hardware-specific changes		
Dependency:	Refer to: p9601, p9729, p9799 Refer to: F01690		
r9782[0...1]	SI time stamps to check changes (Control Unit) / SI chg t CU		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min - [h]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [h]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting - [h]
Description:	Displays the time stamps for the checksums for tracking changes for Safety Integrated. The time stamps for the checksums for tracking changes (fingerprint for the "safety logbook" functionality) made to safety parameters are saved in parameters p9781[0] and p9781[1].		
Index:	[0] = SI time stamp for checksum to track functional changes [1] = SI time stamp for checksum to track hardware-specific changes		
Dependency:	Refer to: p9601, p9729, p9799 Refer to: F01690		
r9794[0...19]	SI crosswise comparison list (Control Unit) / SI DCC_list CU		
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 2802 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of the data that are being presently compared crosswise on the Control Unit. Example: r9794[0] = 1 (monitoring clock cycle) r9794[1] = 2 (enable safety functions) r9794[2] = 3 (SGE changeover, tolerance time) r9794[3] = 4 (transition time, STOP F to STOP A) ... The content of the list of crosswise-compared data is dependent upon the particular application.		
Dependency:	Refer to: r9894		
Note:	A complete list of numbers for crosswise-compared data items appears in fault F01611.		

r9795 SI diagnostics STOP F (Control Unit) / SI diag STOP F CU

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2802
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -

Description: Displays the number of the cross-checked data which has caused STOP F on the Control Unit.

Dependency: Refer to: r9895

Refer to: F01611

Note: A complete list of numbers for crosswise-compared data items appears in fault F01611.

r9798 SI actual checksum SI parameters (Control Unit) / SI act_checksum CU

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2800
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting -

Description: Displays the checksum over the checked Safety Integrated parameters on the Control Unit (actual checksum).

Dependency: Refer to: p9799, r9898

p9799 SI reference checksum SI parameters (Control Unit) / SI set_checksum CU

SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2800
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0000 hex	Max FFFF FFFF hex	Factory setting 0000 hex

Description: Sets the checksum for the checked Safety Integrated parameters on the Control Unit (reference checksum).

Dependency: Refer to: r9798, p9899

p9801	SI enable, functions integrated in the drive (Motor Module) / SI enable fct MM																							
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 bin																					
Description:	Sets the enable signals for safety functions on the Motor Module that are integrated in the drive. Not all of the settings listed below will be permissible, depending on the Control Unit and Motor Module or Power Module being used: - p9801 = 0: Safety functions integrated in the drive disabled. - p9801 = 1: STO/SS1 enabled via terminals. Permissible if r9871.0 = 1. - p9801 = 4: Motion monitoring functions integrated in the drive enabled via Terminal Module 54F (TM54F) (SINAMICS S120) or via an integrated F-DI/F-DO (SINAMICS S110). Permissible if r9871.5 = 1. - p9801 = 5: Motion monitoring functions integrated in the drive enabled via Terminal Module 54F (TM54F) and STO/SS1 via terminals (SINAMICS S120 only). Permissible if r9871.5 = 1. - p9801 = 8: STO/SS1 enabled via PROFIsafe. Permissible if r9871.6 = 1. - p9801 = 9: STO/SS1 enabled via PROFIsafe and STO/SS1 via terminals. Permissible if r9871.6 = 1. - p9801 = 12: Motion monitoring functions integrated in the drive enabled via PROFIsafe. Permissible if r9871.4 = 1. - p9801 = 13: Motion monitoring functions integrated in the drive enabled via PROFIsafe and STO/SS1 via terminals. Permissible if r9871.4 = 1.																							
Bit field:	<table> <tr> <th>Bit</th><th>Signal name</th><th>1 signal</th><th>0 signal</th><th>FP</th></tr> <tr> <td>00</td><td>STO (SH) via terminals (Motor Module) enable</td><td>Enable</td><td>Inhibit</td><td>2810</td></tr> <tr> <td>02</td><td>Motion monitoring functions integr. in the drive (Motor Module)</td><td>Enable</td><td>Inhibit</td><td>-</td></tr> <tr> <td>03</td><td>PROFIsafe (Motor Module) enable</td><td>Enable</td><td>Inhibit</td><td>-</td></tr> </table>	Bit	Signal name	1 signal	0 signal	FP	00	STO (SH) via terminals (Motor Module) enable	Enable	Inhibit	2810	02	Motion monitoring functions integr. in the drive (Motor Module)	Enable	Inhibit	-	03	PROFIsafe (Motor Module) enable	Enable	Inhibit	-			
Bit	Signal name	1 signal	0 signal	FP																				
00	STO (SH) via terminals (Motor Module) enable	Enable	Inhibit	2810																				
02	Motion monitoring functions integr. in the drive (Motor Module)	Enable	Inhibit	-																				
03	PROFIsafe (Motor Module) enable	Enable	Inhibit	-																				
Dependency:	Refer to: p9601, r9871																							
Note:	MM: Motor Module. SI: Safety Integrated. SMM: Safe Motion Monitoring. STO: Safe Torque Off/SH: Safe standstill. SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN 60204). F-DI: Failsafe Digital Input. F-DO: Failsafe Digital Output. A change only becomes effective after a POWER ON.																							
p9802	SI enable Safe Brake Control (Motor Module) / SI enable SBC MM																							
SERVO, VECTOR	Can be changed: C2(95) Data type: Integer32 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 3 Func. diagram: 2814 Unit selection: - Expert list: 1 Factory setting 0																					
Description:	Sets the enable signal for the "Safe Brake Control" function (SBC) on the Motor Module. 0: Inhibit SBC 1: Enable SBC																							
Dependency:	Refer to: p9602																							

Note: The "Safe Brake Control" function is not activated until at least one safety monitoring function has been enabled (i.e. p9501 not equal to 0 and/or p9801 not equal to 0).
 It does not make sense to parameterize "no motor holding brake available" and enable "Safe Brake Control" (p1215 = 0, p9602 = p9802 = 1) if there is no motor holding brake.
 The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.
 It is not permissible to parameterize "motor holding brake without feedback signals" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).
 MM: Motor Module
 SBC: Safe Brake Control
 SI: Safety Integrated

p9810			
SI PROFIsafe address (Motor Module) / SI PROFIsafe MM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0000 hex	Max FFFE hex	Factory setting 0000 hex
Description:	Sets the PROFIsafe address of the Motor Module.		
p9821			
BI: SI signal source for SBA (Motor Module) / SI s_src SBA MM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 2810
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min -	Max -	Factory setting 0
Description:	An entry is added, specifying whether and/or via which digital CU input the SBA feedback signal (SBA_DIAG) is to be read in; the parameter can be interconnected as a BICO drain. 0 : No SBC with SBA (default) Bico code: To be parameterized by the user SBA and no DQ CIM: p0722.x CU signal source for DIx where x = { 0,1,2...7 } SBA with DQ CIM: p9872.3 Signal source is permanently interconnected to bit 3		
Dependency:	Refer to: p9601		
Note:	No difference is tolerated for a data cross-check between p9621 and p9821.		
p9822[0...1]			
SI SBA relay wait times (Motor Module) / SI SBA t_wait MM			
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0.00 [µs]	Max 1000000.00 [µs]	Factory setting [0] 100000.00 [µs] [1] 65000.00 [µs]
Description:	Sets the wait times for activating and deactivating the relay. The relay-specific minimum wait times for evaluating the feedback signal contacts have to be set.		
Index:	[0] = Relay wait time activation [1] = Relay wait time deactivation		
Dependency:	Refer to: p9850		

p9850	SI SGE changeover tolerance time (Motor Module) / SI SGE_chg tol MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2000000.00 [µs]	Access level: 3 Func. diagram: 2810 Unit selection: - Expert list: 1 Factory setting 500000.00 [µs]
Description:	Sets the tolerance time to change over the safety-related inputs (SGE) on the Motor Module. An SGE changeover is not effective simultaneously due to the different runtimes in the two monitoring channels. After an SGE changeover, dynamic data is not subject to a data cross-check during this tolerance time.		
Dependency:	Refer to: p9650		
Note:	For a data cross-check between p9650 and p9850, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is internally rounded-off to an integer multiple of the monitoring clock cycle. SGE: Safety-related input (e.g. STO terminals)		
p9851	SI STO/SBC/SS1 debounce time (Motor Module) / SI STO t_debou MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [µs]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100000.00 [µs]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [µs]
Description:	Sets the debounce time for the EP terminal of the Motor Module. The debounce time is rounded to whole milliseconds. The debounce time indicates the maximum duration of a fault pulse on the F-DIs, so that there are no negative effects on the SGEs. Example: Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed. Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.		
Note:	Example: Debounce time = 1 ms: Fault pulses of 1 ms are filtered; only pulses longer than 2 ms are processed. Debounce time = 3 ms: Fault pulses of 3 ms are filtered; only pulses longer than 4 ms are processed.		
p9852	SI Safe Stop 1 delay time (Motor Module) / SI Stop 1 t_del MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 300000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0.00 [ms]
Description:	Sets the delay time of the pulse suppression for the function "Safe Stop 1" (SS1) on the Motor Module to brake along the OFF3 down ramp (p1135).		
Dependency:	Refer to: p1135, p9652		
Note:	For a data cross-check between p9652 and p9852, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle. SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)		

p9858 SI transition time STOP F to STOP A (Control Unit) / SI STOP F->A MM				
SERVO, VECTOR	Can be changed: C2(95)	Calculated: -	Access level: 3	
	Data type: FloatingPoint32	Dynamic index: -	Func. diagram: 2802	
	P-Group: Safety Integrated	Units group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min 0.00 [µs]	Max 30000000.00 [µs]	Factory setting 0.00 [µs]	
Description:	Sets the transition period from STOP F to STOP A on the Motor Module.			
Dependency:	Refer to: p9658, r9895 Refer to: F30611			
Note:	For a data cross-check between p9658 and p9858, a difference of one Safety monitoring clock cycle is tolerated. The parameterized time is rounded internally to an integer multiple of the monitoring clock cycle. STOP F: Defect in a monitoring channel (error in the data cross-check) STOP A: Pulse suppression via the safety shutdown path			

r9870[0...3] SI version safety functions integrated in drive (Motor Module) / SI version MM				
SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 3	
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 2802	
	P-Group: Safety Integrated	Units group: -	Unit selection: -	
	Not for motor type: -	Scaling: -	Expert list: 1	
	Min -	Max -	Factory setting -	
Description:	Displays the Safety Integrated version for the safety functions integrated in the drive on the Motor Module.			
Index:	[0] = Safety Version (major release) [1] = Safety Version (minor release) [2] = Safety Version (baselevel or patch) [3] = Safety Version (hotfix)			
Dependency:	Refer to: r9770, r9890			
Note:	Example: r9870[0] = 2, r9870[1] = 60, r9870[2] = 1, r9870[3] = 0 --> Safety version V02.60.01.00			

r9871 SI common functions (Motor Module / SI general fct MM					
SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 3		
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2804		
	P-Group: Safety Integrated	Units group: -	Unit selection: -		
	Not for motor type: -	Scaling: -	Expert list: 1		
	Min -	Max -	Factory setting -		
Description:	Displays the Safety Integrated monitoring functions supported on the Control Unit and Motor Module. The Motor Module determines this display.				
Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO supported via terminals	Yes	No	2804
	01	SBC supported	Yes	No	2804
	02	SI Motion supported	Yes	No	2804
	03	SS1 supported	Yes	No	2804
	04	PROFIsafe supported for Extended Functions	Yes	No	-
	05	Drive-based motion monitoring functions supported	Yes	No	-
	06	PROFIsafe supported for Basic Functions	Yes	No	-
	07	Encoderless motion monitoring supported	Yes	No	-
	08	Safe Brake Adapter supported	Yes	No	-
	09	PROFIsafe supported BasicFunctions for parall circuit connection	Yes	No	-

Dependency: Refer to: r9771
Note: MM: Motor Module
 SBC: Safe Brake Control
 SI: Safety Integrated
 SS1: Safe Stop 1
 STO: Safe Torque Off / SH: Safe standstill

r9872.0...23 CO/BO: SI status list (Motor Module) / SI status MM

SERVO, VECTOR	Can be changed: -	Calculated: -	Access level: 2
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2804
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
-	-	-	

Description: Displays the Safety Integrated status on the Motor Module.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	STO on Motor Module selected	Yes	No	2810
	01	STO on Motor Module active	Yes	No	2810
	02	SS1 delay time on Motor Module active	Yes	No	2810
	03	Safe Brake Adapter feedback signal	High	Low	-
	04	SBC requested	Yes	No	2814
	05	SS1 selected on the Motor Module (Basic Functions)	Yes	No	-
	06	SS1 active on the Motor Module (Basic Functions)	Yes	No	-
	09	STOP A cannot be acknowledged, active	Yes	No	2802
	10	STOP A active	Yes	No	2802
	15	STOP F active	Yes	No	2802
	16	STO cse: Safety comm. mode	Yes	No	-
	17	STO cause selection via terminal (Basic Functions)	Yes	No	-
	18	STO cause: selection via SMM	Yes	No	-
	20	STO cause selection PROFIsafe (Basic Functions)	Yes	No	-
	22	SS1 cause selection terminal (Basic Functions)	Yes	No	-
	23	SS1 cause selection PROFIsafe (Basic Functions)	Yes	No	-

Dependency: Refer to: r9772

Notice: If communication between the Control Unit and the Motor Module is interrupted (e.g. by switching off the Motor Module), this display parameter is no longer updated. The last transferred status of the Motor Module is displayed.

Note: Re bit 00:
 When STO is selected, the cause is displayed in bits 16 ... 18 and in bit 20.
 Re bit 05:
 When SS1 is selected, the cause is displayed in bits 22 and 23.
 Re bit 18:
 When the bit is set, STO is selected via PROFIsafe or Terminal Module 54F (TM54F).
 SMM: Safe Motion Monitoring
 Re bit 22 and 23:
 These bits show via which path the SS1 has been triggered, i.e. what has started the SS1 delay time.
 If the SS1 delay time is not started (e.g. because an STO is triggered at the same time), neither of the two bits is set.

r9880	SI monitoring clock cycle (Motor Module) / SI monitor_click MM		
SERVO, VECTOR	Can be changed: - Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min - [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max - [ms]	Access level: 3 Func. diagram: 2802 Unit selection: - Expert list: 1 Factory setting - [ms]
Description:	Displays the clock cycle time for the Safety Integrated Basic Functions on the Motor Module.		
Dependency:	Refer to: r9780		
r9881[0...11]	SI Motion Sensor Module Node Identifier second channel / SI Mtn SM Ident		
SERVO, VECTOR	Can be changed: - Data type: Unsigned8 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the Node Identifier of the Sensor Module that the second channel uses for the motion monitoring functions.		
r9890[0...2]	SI version (Sensor Module) / SI version SM		
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the Safety Integrated version on the Sensor Module.		
Index:	[0] = Safety Version (major release) [1] = Safety Version (minor release) [2] = Safety Version (baselevel or patch)		
Dependency:	Refer to: r9770, r9870		
Note:	Example: r9890[0] = 2, r9890[1] = 3, r9890[2] = 1 --> Safety-Version V02.03.01		
r9894[0...19]	SI crosswise comparison list (Motor Module) / SI DCC_list MM		
SERVO, VECTOR	Can be changed: - Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 2802 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of the data that are being presently compared crosswise on the Motor Module. Example: r9894[0] = 1 (monitoring clock cycle) r9894[1] = 2 (enable safety functions) r9894[2] = 3 (SGE changeover, tolerance time) r9894[3] = 4 (transition time, STOP F to STOP A) ... The content of the list of crosswise-compared data is dependent upon the particular application.		
Dependency:	Refer to: r9794		
Note:	The complete list of numbers for data cross-check is listed in Fault F30611.		

r9895	SI diagnostics STOP F (Motor Module) / SI diag STOP F MM		
SERVO, VECTOR	Can be changed: - Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: 2802 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the number of the cross-checked data which has caused STOP F on the Motor Module.		
Dependency:	Refer to: r9795 Refer to: F30611		
Note:	The complete list of numbers for data cross-check is listed in Fault F30611.		
r9898	SI actual checksum SI parameters (Motor Module) / SI act_checksum MM		
SERVO, VECTOR	Can be changed: - Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 2800 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the checksum for the checked Safety Integrated parameters on the Motor Module (actual checksum).		
Dependency:	Refer to: r9798, p9899		
p9899	SI reference checksum SI parameters (Motor Module) / SI set_checksum MM		
SERVO, VECTOR	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: 2800 Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the checksum for the checked Safety Integrated parameters on the Motor Module (reference checksum).		
Dependency:	Refer to: p9799, r9898		
r9900	Actual topology number of indices / Act topo indices		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: Topology Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the number of indices of the actual topology.		
Dependency:	Refer to: r9901		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		

r9901[0...n]	Actual topology / Act topo		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: Topology Not for motor type: - Min -	Calculated: - Dynamic index: r9900 Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting -
Description:	Displays the actual topology of the drive unit. The actual topology is sub-divided into several sections. Each of the following data is saved under an index. General data on the topology: - version - attribute to compare the actual topology and target topology - number of components Data on a component: - type component of the node ID of the component - number of DRIVE-CLiQ sockets in the Node Identifier - manufacturer and version of the Node Identifier - serial number of the Node Identifier (4 indices) - index of the component - order number (8 indices) - attribute to compare the actual topology and target topology of the component - communications address - number of port types - port type - number of ports of the port type - communications address of the associated/linked component - number of the associated/linked port - communications address of the associated/linked component - number of the associated/linked port - etc. Data on the next component: - etc.		
Dependency:	Refer to: r9900		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		
p9902	Target topology number of indices / TargetTopo indices		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: Topology Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 65535	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 1
Description:	Sets the number of target topology indices.		
Dependency:	Refer to: p9903		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		

p9903[0...n]	Target topology / Target topology		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: - Data type: Unsigned16 P-Group: Topology Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: p9902 Units group: - Scaling: - Max FFFF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0000 hex
Description:	Sets the target topology of the drive unit. The target topology is sub-divided into several sections. Each of the following data is saved under an index. General data on the topology: - version - attribute to compare the actual topology and target topology - number of components Data on a component: - type component of the Node Identifier of the component - number of DRIVE-CLiQ sockets in the Node Identifier - manufacturer and version of the Node Identifier - serial number of the Node Identifier (4 indices) - index of the component - order number (8 indices) - attribute to compare the actual topology and target topology of the component - component number - number of port types - port type - number of ports of the port type - component number of the associated/linked component - number of the associated/linked port - component number of the associated/linked component - number of the associated/linked port - etc. Data on the next component: - etc.		
Dependency:	Refer to: p9902		
Note:	The target topology can only be modified using the commissioning software. Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software. Changes do not become effective until they have been accepted with p9428 = 1, or on change of status from p0009 = 101 to 0 or 111.		

p9904	Topology comparison, acknowledge differences / Topo_compare ackn		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Unsigned32 P-Group: Topology Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	If, when comparing the actual topology and target topology, only error has occurred, that can be acknowledged, then using this parameter, a new comparison can be started - acknowledging the error in the target topology. Differences that can be acknowledged: - topology comparison, component shifted - topology comparison, serial number of a component has been detected to be different (byte 3 = 1) - topology comparison shows one component that is connected differently The following parameter values are available: p9904 = 1 --> the procedure is started. p9904 = 0 after starting --> the procedure has been successfully completed. p9904 = 1 after starting --> the procedure has not been successfully completed. The possible causes for an unsuccessful procedure are located in bytes 4, 3, 2. Byte 2: Number of structural differences. Byte 3: Number of differences that can be acknowledged (p9904). Byte 4: Number of differences. These differences can be resolved as follows: - sets the topology comparison (p9906 or p9907/p9908). - change over the actual topology. The appropriate action should be selected corresponding to the message that is displayed/output.		
Note:	In order to permanently accept the acknowledgement of the fault that can be resolved, then it must be saved in a non-volatile fashion (p0977).		
p9905	Device specialization / Specialization		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Unsigned16 P-Group: Topology Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	With p9905 = 1, the serial numbers and the hardware versions of all of the components are transferred from the actual topology into the target topology and a new comparison is started.. For this device specialization, the components of the target topology may only differ from those of the actual topology by the serial numbers. With p9905 = 2, the serial numbers, the hardware versions and the order numbers of all of the components are transferred from the actual topology into the target topology and a new comparison is started.. For this device specialization, the components of the target topology may only differ from those of the actual topology by the serial numbers and order numbers.		
Note:	p9905 is automatically set to 0 at the end of the operation. In order to permanently accept the data, it is necessary to save in a non-volatile fashion (p0977).		

p9906	Topology comparison, comparison stage of all components / Topo_cmpr tot comp		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Integer16 P-Group: Topology Not for motor type: - Min 0 Max 99	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the type of comparison between the actual topology and target topology. The comparison is started by setting the required value.		
Value:	0: High: Compares the complete electronic rating plate 1: Average: Compares the component type and the Order number 2: Low: Compares the component type 3: Minimum: Compares the component class 99: Topology has different comparison stages		
Note:	The electronic rating plate comprises the following data: - component type (e.g. "SMC20") - Order No. (e.g. "6SL3055-0AA0-5BA0") - manufacturer (e.g. SIEMENS) - hardware version (e.g. "A") - Serial No. (e.g. "T-P30050495") When comparing the topology, the following data is compared in the target and actual topologies: p9906 = 0: Component type, Order No., Hardware version, Manufacturer, Serial No. p9906 = 1: Component type, Order No. p9906 = 2: Component type p9906 = 3: Component class (e.g. Sensor Module or Motor Module)		
p9907	Topology comparison, comparison stage of the component number / Topo_cmpr comp_no		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Unsigned8 P-Group: Topology Not for motor type: - Min 0 Max 199	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Enters the number of the component where the setting of how the actual topology should be compared to the target topology should be changed.		
Dependency:	Refer to: p9908		
p9908	Topology comparison, comparison stage of a component / Topo_cmpr 1 comp		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Integer16 P-Group: Topology Not for motor type: - Min 0 Max 99	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the type of comparison of a component in the target topology with the actual topology. The comparison is started by setting the required value.		
Value:	0: High: Compares the complete electronic rating plate 1: Average: Compares the component type and the Order number 2: Low: Compares the component type 3: Minimum: Compares the component class 99: Topology has different comparison stages		
Dependency:	Refer to: p9907		

Note: The electronic rating plate comprises the following data:

- component type (e.g. "SMC20")
- Order No. (e.g. "6SL3055-0AA0-5BA0")
- manufacturer (e.g. SIEMENS)
- hardware version (e.g. "A")
- Serial No. (e.g. "T-P30050495")

When comparing the topology, the following data is compared in the target and actual topologies:

p9908 = 0: Component type, Order No., Hardware version, Manufacturer, Serial No.

p9908 = 1: Component type, Order No.

p9908 = 2: Component type

p9908 = 3: Component class (e.g. Sensor Module or Motor Module)

p9909 Topology comparison, component replacement / Topo_cmptr replace			
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1)	Calculated: -	Access level: 3
	Data type: Unsigned8	Dynamic index: -	Func. diagram: -
	P-Group: Topology	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 1	Factory setting 1
Description:	For p9909 = 1, the serial number and the hardware version of the new replaced component is automatically transferred from the actual topology into the target topology and then saved in a non-volatile fashion. For the components that have been replaced, the electronic rating plate must match as far as the following data is concerned: - component type (e.g. "SMC20") - Order No. (e.g. "6SL3055-0AA0-5BA0") For p9909 = 0, serial numbers and hardware versions are not automatically transferred. In this case, the transfer must be made using p9904.		
Dependency:	Refer to: p9904, p9905		
Note:	The modified target topology is automatically saved in a non-volatile fashion when the drive object runs-up (e.g. after a POWER ON). Special case for Control Unit and option slot modules: When replacing these components, independent of p9909, the serial number and hardware version are automatically transferred and saved in a non-volatile fashion.		

p9910 Transfer additional components into the target topology / Transfer comp			
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1)	Calculated: -	Access level: 1
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Topology	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min 0	Max 6	Factory setting 0
Description:	Transfer additional inserted DRIVE-CLiQ components into the target topology and add the appropriate drive objects to the project.		
Value:	0: No selection 1: Drive object type SERVO 2: Drive object type VECTOR 3: SINAMICS GM (DFEMV & VECTORMV) 4: SINAMICS SM (AFEMV & VECTORMV) 5: SINAMICS GL (VECTORGL) 6: SINAMICS SL (VECTORSL)		

p9911[0...3]	Insert drive object / Drv_obj insert		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Unsigned32 P-Group: - Not for motor type: - Min 0 Max 4294967295	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	New drive objects can be created using this parameter. Index 0: The values 2 ... 62 are permissible. Index 1: Number of the drive object type (e.g. 11 for type SERVO). Index 2: Function modules defined for the drive object. Index 3: = 0: Ready. = 1: Reset (only indices 0 ... 3). = 2: Reset all (indices 0 ... 3 and flagged entries). = 3: Check and flag for insertion.		
Index:	[0] = Drive object number [1] = Drive object type [2] = Drive object function module [3] = Reset or check and flag for insertion		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		

p9912[0...1]	Delete drive object / Drv_obj delete		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(3) Data type: Unsigned16 P-Group: - Not for motor type: - Min 0 Max 62	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Drive objects can be deleted using this parameter. Index 0: The values 2 ... 62 are permissible. Index 1: = 0: Ready. = 1: Reset (only indices 0 and 1) = 2: Reset all (indices 0 and 1 and flagged entries). = 3: Check and flag for deletion. = 30: Check and flag for deletion. Keep target topology.		
Index:	[0] = Drive object number [1] = Reset or check and flag for deletion		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		

p9913[0...2]	Change drive object number / Change drv_obj_no		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(4) Data type: Unsigned16 P-Group: - Not for motor type: - Min 0 Max 62	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Existing drive objects can be assigned new numbers using these parameters. Index 0: The values 2 ... 62 are permissible. Index 1: The values 2 ... 62 are permissible. Index 2: = 0: Ready. = 1: Reset (only indices 0 ... 2). = 2: Reset all (indices 0 ... 2 and flagged entries). = 3: Check and flag for modification.		
Index:	[0] = Drive object number old [1] = Drive object number new [2] = Reset or check and flag for modification		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		

p9914[0...2]	Change component number / Change comp_no		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1 Data type: Unsigned16 P-Group: - Not for motor type: - Min 0 Max 199	Calculated: - Dynamic index: - Units group: - Scaling: -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	You can change the number of topology components using this parameter. Index 0: The values 2 ... 199 are permissible. Index 1: The values 2 ... 199 are permissible. Index 2: = 0: Ready. = 1: Reset (only indices 0 ... 2). = 2: Reset all (indices 0 ... 2 and flagged entries). = 3: Check and flag for modification.		
Index:	[0] = Component number old [1] = Component number new [2] = Reset or check and flag for modification		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		

p9915	DRIVE-CLiQ data transfer error shutdown threshold master / DLQ fault master		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Unsigned32 P-Group: Topology Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max 0007 07FF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0007 02FF hex
Description:	Only for internal Siemens service purposes.		
p9916	DRIVE-CLiQ data transfer error shutdown threshold slave / DLQ fault slave		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(1) Data type: Unsigned32 P-Group: Topology Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max 0007 07FF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0007 02FF hex
Description:	Only for internal Siemens service purposes.		
p9917[0...1]	Delete component / Delete comp		
CU_CX32, CU_I, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: C1(30) Data type: Unsigned16 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 199	Access level: 3 Func. diagram: - Unit selection: - Expert list: 0 Factory setting 0
Description:	Excessive components that have not been assigned can be removed from the component target topology using this parameter. Index 0: The values 2 ... 199 are permissible. Index 1: = 0: Ready. = 1: Reset (only indices 0 and 1) = 2: Reset all (indices 0 and 1 and flagged entries). = 3: Check and flag for deletion.		
Index:	[0] = Component number [1] = Reset or check and flag for deletion		
Note:	Only for internal Siemens use. The parameter is not displayed for the STARTER commissioning software.		

p9920[0...99]	Licensing, enter license key / Enter license key		
CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Unsigned8 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Enters the license key for this drive unit. Example of the license key: EACZ-QBCA = 69 65 67 90 45 81 66 67 65 dec (ASCII characters) Index 0 = license key character 1 (e.g. 69 dec) Index 1 = license key character 2 (e.g. 65 dec) ... Index 19 = license key character 20 (e.g. 0 dec) With the STARTER commissioning software, ASCII characters are not entered coded, i.e. the characters of the license key can be entered as printed in the Certificate of License. In this case, STARTER codes the characters.		
Dependency:	Refer to: r7843, p9921 Refer to: A13000, A13001, F13010		
Notice:	An ASCII table (excerpt) can be found, for example, in the Appendix of the List Manual:		
Note:	Only the ASCII characters, contained in a license key can be entered. When changing p9920[x] to the value 0, all of the following indices are also set to 0. After entering the license key, the license key must be activated (p9921). If the licensing is not adequate, then the following alarm is displayed together with LED: - A13000 --> licensing not sufficient - LED READY --> flashes green/red with 0.5 Hz		
p9921	Licensing, activate license key / Act license key		
CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150	Can be changed: U, T Data type: Integer16 P-Group: - Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 1	Access level: 2 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Activates the entered license key. The following is executed when activating the license key. - the checksum of the entered license key is checked. - the entered license key is saved in a non-volatile fashion on the memory card. - re-enter the license key.		
Value:	0: Inactive 1: Activate start license key		
Dependency:	Refer to: p9920 Refer to: A13000, A13001, F13010		
Note:	Before activation, the license key entered using parameter p9920 is checked. If this check identifies an error, activation is rejected. In this case, writing a 1 to p9921 is rejected. When the license key has been activated, p9921 is automatically set to 0.

Description:	Sets the sampling time for the Terminal Module 54F (TM54F).		

p10001 SI delay time for test stop at DO 0 ... DO 3 / SI t_delay DO

TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 2.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2000.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the wait time for testing the digital outputs 0 ... 3 (DO 0 ... DO 3). Within this time, for a forced checking procedure of the digital outputs, the signal must have been detected via the corresponding digital input DI 20 ... DI 23.		
Dependency:	Refer to: p10003, p10007, p10041, p10046		
Note:	The wait time must be set to a value greater than parameter p10017. The duration of the test stop is adapted to the debounce time set in p10017 automatically if the wait time in p10001 should be less than the debounce time.		

p10002	SI discrepancy monitoring time / SI discrep t_monit		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 1.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2000.00 [ms]	Access level: 3 Func. diagram: 2850, 2851 Unit selection: - Expert list: 1 Factory setting 500.00 [ms]
Description:	Sets the monitoring time for the discrepancy for the digital inputs. The signal states at the two associated digital inputs (F-DI) must assume the same state within this monitoring time.		
Note:	F-DI: Failsafe Digital Input		
p10003	SI forced checking procedure timer / SI FrCdCkProcTimer		
TM54F_MA	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 0.00 [h]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 8760.00 [h]	Access level: 3 Func. diagram: 2848 Unit selection: - Expert list: 1 Factory setting 8.00 [h]
Description:	Sets the time to carry out the forced checking procedure (test stop). Within the parameterized time, the digital inputs/outputs must have been subject to a forced checking procedure at least once. The forced checking procedure is started with BI: p10007 = 0/1 signal.		
Dependency:	Refer to: p10001, p10007, p10046		
r10004[0...1]	SI actual checksum TM54F parameters / SI act CRC TM54F		
TM54F_MA, TM54F_SL	Can be changed: - Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: 2847 Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the actual checksum of the checksum-checked parameters for the Terminal Module 54F (TM54F).		
p10005[0...1]	SI reference checksum TM54F parameters / SI ref CRC TM54F		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: 2847 Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Displays the reference checksum of the checksum-checked parameters for the Terminal Module 54F (TM54F).		
p10006	SI acknowledgement internal event input terminal / SI ackn int event		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Select a safety-relevant digital input for the signal "acknowledge internal event" (internal fault). The signal is transferred to the corresponding control signal of all drives. The falling edge at this input resets the status "internal event" in the drives.		

Value:	0:	Statically active
	1:	F-DI 0 (X521.2/3/6)
	2:	F-DI 1 (X521.4/5/7)
	3:	F-DI 2 (X522.1/2/7)
	4:	F-DI 3 (X522.3/4/8)
	5:	F-DI 4 (X522.5/6/9)
	6:	F-DI 5 (X531.2/3/6)
	7:	F-DI 6 (X531.4/5/7)
	8:	F-DI 7 (X532.1/2/7)
	9:	F-DI 8 (X532.3/4/8)
	10:	F-DI 9 (X532.5/6/9)
	255:	Statically inactive

p10007 BI: SI forced checking procedure F-DO 0 ... 3 signal source / SI frc_chF-DO s_sc

TM54F_MA	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned32 / Binary	Dynamic index: -	Func. diagram: 2848
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	0

Description: Sets the signal source to trigger the test stop (e.g. digital input of the Control Unit or one of the other Terminal Modules).

The test stop is triggered on a 0/1 signal edge.

The TM54F must not be in commissioning mode at this point (p0010 = 0).

Dependency: Refer to: p10001, p10003, p10041, p10046

Notice: Digital inputs of the TM54F must not be used to trigger the test stop.

p10008 SI operating mode TM54F / SI op_mode TM54F

TM54F_MA, TM54F_SL	Can be changed: C2(95)	Calculated: -	Access level: 4
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	1	1

Description: Sets the operating mode for the Terminal Module 54F (TM54F).

Value: 0: Function interface
1: Control interface

Note: Parameter being prepared. For this firmware version, the function interface is not supported.

p10010[0...5] SI drive object assignment / SI drv_obj assign

TM54F_MA, TM54F_SL	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned16	Dynamic index: -	Func. diagram: 2847, 2848
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0	62	0

Description: Sets the drive object number for the drives that are available.

Index: [0] = Drive 1
[1] = Drive 2
[2] = Drive 3
[3] = Drive 4
[4] = Drive 5
[5] = Drive 6

Notice: If, for a drive, Terminal Module 54F (TM54F) is activated (p9601 = 5), its drive object number must be set in an index.

Note: A change only becomes effective after a POWER ON.

p10011[0...5]	SI drive group assignment / SI drv_gr assign		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min 1	Calculated: - Dynamic index: - Units group: - Scaling: - Max 4	Access level: 3 Func. diagram: 2848 Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the drive group for the drives that are available. A drive group is a combination of several drives with the same types of behavior.		
Index:	[0] = Drive 1 [1] = Drive 2 [2] = Drive 3 [3] = Drive 4 [4] = Drive 5 [5] = Drive 6		
p10012[0...5]	SI Motor Module Node Identifier Word 1 / SI MM Node ID 1		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the current Node Identifier (word 1, bit 0 ... 31) for the Motor Modules.		
Index:	[0] = Drive 1 [1] = Drive 2 [2] = Drive 3 [3] = Drive 4 [4] = Drive 5 [5] = Drive 6		
Dependency:	Refer to: p10013, p10014		
Note:	The Node Identifier (96 bit) is represented in the following 3 parameters. p10012[0] word 1 (bit 0 ... 31) for Motor Module 1 ... p10012[5] word 1 (bit 0 ... 31) for Motor Module 6 p10013[0] word 2 (bit 32 ... 63) for Motor Module 1 ... p10013[5] word 2 (bit 32 ... 63) for Motor Module 6 p10014[0] word 3 (bit 64 ... 95) for Motor Module 1 ... p10014[5] word 3 (bit 64 ... 95) for Motor Module 6		

p10013[0...5]	SI Motor Module Node Identifier Word 2 / SI MM Node ID 2		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the current Node Identifier (word 2, bit 32 ... 63) for the Motor Modules.		
Index:	[0] = Drive 1 [1] = Drive 2 [2] = Drive 3 [3] = Drive 4 [4] = Drive 5 [5] = Drive 6		
Dependency:	Refer to: p10012, p10014		
Note:	The complete Node Identifier (96 bit) is represented in p10012, p10013 and p10014.		
p10014[0...5]	SI Motor Module Node Identifier Word 3 / SI MM Node ID 3		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Sets the current Node Identifier (word 3, bit 64 ... 95) for the Motor Modules.		
Index:	[0] = Drive 1 [1] = Drive 2 [2] = Drive 3 [3] = Drive 4 [4] = Drive 5 [5] = Drive 6		
Dependency:	Refer to: p10012, p10013		
Note:	The complete Node Identifier (96 bit) is represented in p10012, p10013 and p10014.		
p10017	SI digital inputs debounce time / SI DI t_debounce		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: FloatingPoint32 P-Group: Safety Integrated Not for motor type: - Min 1.00 [ms]	Calculated: - Dynamic index: - Units group: - Scaling: - Max 100.00 [ms]	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1.00 [ms]
Description:	Parameter setting for the debounce time of the F-DIs and single-channel DIs of the TM54F. The debounce time is rounded to whole mS. The debounce time indicates the maximum duration of a fault pulse on the FDIs, so that there are no negative effects on the SGEs. Example: Debounce time 1mS : Fault pulses of 1mS are filtered; only pulses longer than 2mS are processed. Debounce time 3mS : Fault pulses of 3mS are filtered; only pulses longer than 4mS are processed.		

p10020[0...3]	SI special operating mode selection / SI spec op sel		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 3	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 1
Description:	Sets the special operating mode for the operating mode "function interface". 0 = Inactive 1 = Safe Operating Stop with braking (SS2) 2 = Safe Operating Stop without braking (SOS) 3 = Safely reduced speed without standstill (SLS) 4 = Safely reduced speed with agreement (SS2 --> SLS)		
Index:	[0] = Drive group 1 [1] = Drive group 2 [2] = Drive group 3 [3] = Drive group 4		
Dependency:	Refer to: p10008		
Note:	Parameter being prepared. For this firmware version, the function interface is not supported. SLS: Safely-Limited Speed SOS: Safe Operating Stop SS2: Safe Stop 2		

p10021[0...3]	SI Emergency Stop stop response / SI Emergency Stop		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 2	Access level: 4 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the stop response for the drive group for Emergency Stop. The input terminal for Emergency Stop is set in p10038. 0 = Stop reaction STO 1 = Stop reaction SS1 2 = Stop reaction SS2		
Index:	[0] = Drive group 1 [1] = Drive group 2 [2] = Drive group 3 [3] = Drive group 4		
Dependency:	Refer to: p10008, p10038		
Note:	Parameter being prepared. For this firmware version, the function interface is not supported.		

p10022[0...3] SI STO input terminal / SI STO DI			
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Sets the input terminal for STO (operating mode "control interface").		
Value:	0: Statically active 1: F-DI 0 (X521.2/3/6) 2: F-DI 1 (X521.4/5/7) 3: F-DI 2 (X522.1/2/7) 4: F-DI 3 (X522.3/4/8) 5: F-DI 4 (X522.5/6/9) 6: F-DI 5 (X531.2/3/6) 7: F-DI 6 (X531.4/5/7) 8: F-DI 7 (X532.1/2/7) 9: F-DI 8 (X532.3/4/8) 10: F-DI 9 (X532.5/6/9) 255: Statically inactive		
Index:	[0] = Drive group 1 [1] = Drive group 2 [2] = Drive group 3 [3] = Drive group 4		
Note:	Re value = 0: No terminal assigned, safety function always active. Re value = 255: No terminal assigned, safety function always inactive. STO: Safe Torque Off		

p10023[0...3] SI SS1 input terminal / SI SS1 DI			
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Integer16 P-Group: Safety Integrated Not for motor type: - Min 0	Calculated: - Dynamic index: - Units group: - Scaling: - Max 255	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting 0
Description:	Assignment of the input terminals for input SS1 (operating mode = control interface) Description, refer to P10022		
Value:	0: Statically active 1: F-DI 0 (X521.2/3/6) 2: F-DI 1 (X521.4/5/7) 3: F-DI 2 (X522.1/2/7) 4: F-DI 3 (X522.3/4/8) 5: F-DI 4 (X522.5/6/9) 6: F-DI 5 (X531.2/3/6) 7: F-DI 6 (X531.4/5/7) 8: F-DI 7 (X532.1/2/7) 9: F-DI 8 (X532.3/4/8) 10: F-DI 9 (X532.5/6/9) 255: Statically inactive		
Index:	[0] = Drive group 1 [1] = Drive group 2 [2] = Drive group 3 [3] = Drive group 4		

Note: SS1: Safe Stop 1
Re value = 0:

p10047[0...3] SI selection of test mode for test stop / SI test mode sel.

TM54F_MA, TM54F_SL	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Integer16	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0001 bin	0011 bin	0010 bin

Value: 1: Test mode 1 evaluation of int. diagnostic signal (passive load)
 2: Test mode 2 read back F-DO in DI (relay circuit)
 3: Test mode 3 read back F-DO in DI (actuator with feedback signal)

Note: When test mode 1 is being used, too great a load resistance on the part of the load between DO+ and DO- can lead to problems during the test stop. It is, therefore, important to make sure that the load resistance on an individual FDO does not exceed 10 Kohm.

r10051.0...9 CO/BO: SI digital inputs status / SI DI status

TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2850, 2851
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the single-channel, logical, and debounced status of the safety digital inputs F-DI 0 .. 9 at Terminal Module 54F (TM54F).

If a safety function is assigned to an input (e.g. via p10022), then the following applies:

- logical "0": Safety function is selected
- logical "1": Safety function is deselected

The interrelationship between the logical level and the external voltage level at the input depends on the parameterization (refer to p10040) of the input as either NC or NO contact and is aligned to the use of a safety function:

With 24 V at the input, NC contacts have a logical "1" level, for 0 V at the input, a logical "0" level.

This means that an NC/NC contact parameterization of 0 V at both inputs of the F-DI selects the safety function, for 24 V at both inputs, deselects the safety function.

With 24 V at the input, NO contacts have a logical "0" level, for 0 V at the input, a logical "1" level.

This means that for an NC/NO contact parameterization, the level 0 V/24 V selects the safety function, the level 24 V/0 V deselects the safety function.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	F-DI 0	Logical 1	Logical 0	2850
	01	F-DI 1	Logical 1	Logical 0	2850

	Min	Max	Factory setting
	-	-	-

Description: Displays the events that lead to the transfer of failsafe signals to all drives assigned to the TM54F. If the second channel of the TM54F transmits failsafe signals, then these are synchronized to the other channel.

Possibilities of resolving the situation:

- error during test stop: correctly perform the test stop.
- internal software error: no possibility of resolving this problem, POWER ON.
- internal synchronization problem: no possibility of resolving this problem, POWER ON.
- all other causes: remove the cause of the error and carry out a safety-relevant acknowledgement (p10006).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Commissioning mode active (p0010 = 95)	Yes	No	2847
	01	Checksum error of the safety parameters	Yes	No	-
	02	Internal synchronization problem within RM54F	Yes	No	-
	03	Internal software error	Yes	No	-
	04	Overvoltage in the TM54F	Yes	No	-
	05	Undervoltage in the TM54F	Yes	No	-
	06	Error at test stop	Yes	No	-
	07	Error for data cross-check within TM54F	Yes	No	-
	08	Overvoltage in the TM54F	Yes	No	-
	31	Failsafe events active on another channel	Yes	No	-

r10055 SI TM54F communication status drive-specific / SI comm_stat drv

TM54F_MA, TM54F_SL	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2846
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the communication status of the individual drives with the the Terminal Module 54F (TM54F).
For r10055 = 0, the following applies:
All drives assigned in p10010 communicate with the TM54F.

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Communication between drive 1 and TM54F	Not configured	Configured	-
	01	Communication between drive 2 and TM54F	Not configured	Configured	-
	02	Communication between drive 3 and TM54F	Not configured	Configured	-
	03	Communication between drive 4 and TM54F	Not configured	Configured	-
	04	Communication between drive 5 and TM54F	Not configured	Configured	-
	05	Communication between drive 6 and TM54F	Not configured	Configured	-

r10056.0 CO/BO: SI Status / SI stat

TM54F_MA	Can be changed: -	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: -
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	-	-	-

Description: Displays the status of the Terminal Module 54F (TM54F).

Bit field:	Bit	Signal name	1 signal	0 signal	FP
	00	Test stop status	Active	Inactive	-

p10061 SI password input TM54F / SI password inp

TM54F_MA, TM54F_SL	Can be changed: T	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2847
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	FFFF FFFF hex	0000 hex

Description: Enters the Safety Integrated password for the Terminal Module 54F (TM54F).
This password is required to change the safety-relevant parameters.

p10062 SI password new TM54F / SI password new

TM54F_MA, TM54F_SL	Can be changed: C2(95)	Calculated: -	Access level: 3
	Data type: Unsigned32	Dynamic index: -	Func. diagram: 2847
	P-Group: Safety Integrated	Units group: -	Unit selection: -
	Not for motor type: -	Scaling: -	Expert list: 1
	Min	Max	Factory setting
	0000 hex	FFFF FFFF hex	0000 hex

Description: Enters the new Safety Integrated password for the Terminal Module 54F (TM54F).

Dependency: A change made to the Safety Integrated password must be acknowledged in the following parameter:
Refer to: p10063

p10063	SI password acknowledgement TM54F / SI ackn password		
TM54F_MA, TM54F_SL	Can be changed: C2(95) Data type: Unsigned32 P-Group: Safety Integrated Not for motor type: - Min 0000 hex	Calculated: - Dynamic index: - Units group: - Scaling: - Max FFFF FFFF hex	Access level: 3 Func. diagram: 2847 Unit selection: - Expert list: 1 Factory setting 0000 hex
Description:	Acknowledgement of the new Safety Integrated password for the Terminal Module 54F (TM54F).		
Dependency:	Refer to: p10062		
Note:	The new password entered into p10062 must be re-entered in order to acknowledge. p10062 = p10063 = 0 is automatically set after the new Safety Integrated password has been successfully acknowledged.		
r10090[0...3]	SI TM54F version / SI TM54F version		
TM54F_MA, TM54F_SL	Can be changed: - Data type: Unsigned16 P-Group: Safety Integrated Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays the Safety Integrated version for the Terminal Module 54F (TM54F).		
Index:	[0] = Safety Version (major release) [1] = Safety Version (minor release) [2] = Safety Version (baselevel or patch) [3] = Safety Version (hotfix)		
Dependency:	Refer to: r9390, r9590, r9770, r9870, r9890		
Note:	Example: r10090[0] = 2, r10090[1] = 60, r10090[2] = 1, r10090[3] = 0 --> SI TM54F version V02.60.01.00		
r61000[0...239]	PROFINET Name of Station / PN Name of Station		
CU_S (PROFINET), CU_S_CU310PN, CU_S_S150 (PROFI- NET)	Can be changed: - Data type: Unsigned8 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays PROFINET Name of Station.		
Notice:	An ASCII table (excerpt) can be found, for example, in the Appendix of the List Manual:		
r61001[0...3]	PROFINET IP of Station / PN IP of Station		
CU_S (PROFINET), CU_S_CU310PN, CU_S_S150 (PROFI- NET)	Can be changed: - Data type: Unsigned8 P-Group: - Not for motor type: - Min -	Calculated: - Dynamic index: - Units group: - Scaling: - Max -	Access level: 3 Func. diagram: - Unit selection: - Expert list: 1 Factory setting -
Description:	Displays PROFINET IP of Station.		

1.3 Parameters for data sets

1.3.1 Parameters for command data sets (CDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data Sets"

The following list contains the command-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 4301400, Language: eng, Type: CDS

p0641[0...n]	CI: Current limit, variable / Curr lim var
p0700[0...n]	Macro Binector Input (BI) / Macro BI
p0820[0...n]	BI: Drive Data Set selection DDS bit 0 / DDS select., bit 0
p0821[0...n]	BI: Drive Data Set selection DDS bit 1 / DDS select., bit 1
p0822[0...n]	BI: Drive Data Set selection DDS bit 2 / DDS select., bit 2
p0823[0...n]	BI: Drive Data Set selection DDS bit 3 / DDS select., bit 3
p0824[0...n]	BI: Drive Data Set selection DDS bit 4 / DDS select., bit 4
p0828[0...n]	BI: Motor changeover, feedback signal / Mot_chng fdbk sig
p0840[0...n]	BI: ON/OFF1 / ON/OFF1
p0844[0...n]	BI: 1. OFF2 / 1. OFF2
p0845[0...n]	BI: 2. OFF2 / 2. OFF2
p0848[0...n]	BI: 1. OFF3 / 1. OFF3
p0849[0...n]	BI: 2. OFF3 / 2. OFF3
p0852[0...n]	BI: Operation enable / Operation enable
p0854[0...n]	BI: Master ctrl by PLC / Master ctrl by PLC
p0855[0...n]	BI: Unconditionally release holding brake / Uncond open brake
p0856[0...n]	BI: Speed controller enable / n_ctrl enable
p0856[0...n]	BI: Velocity controller enable / v_ctrl enable
p0858[0...n]	BI: Unconditionally close holding brake / Uncond close brake
p1000[0...n]	Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set
p1000[0...n]	Macro Connector Inputs (CI) for velocity setpoints / Macro CI v_set
p1020[0...n]	BI: Fixed velocity setpoint selection Bit 0 / v_set_fixed Bit 0
p1020[0...n]	BI: Fixed speed setpoint selection Bit 0 / n_set_fixed Bit 0
p1021[0...n]	BI: Fixed velocity setpoint selection Bit 1 / v_set_fixed Bit 1
p1021[0...n]	BI: Fixed speed setpoint selection Bit 1 / n_set_fixed Bit 1
p1022[0...n]	BI: Fixed velocity setpoint selection Bit 2 / v_set_fixed Bit 2
p1022[0...n]	BI: Fixed speed setpoint selection Bit 2 / n_set_fixed Bit 2
p1023[0...n]	BI: Fixed velocity setpoint selection Bit 3 / v_set_fixed Bit 3
p1023[0...n]	BI: Fixed speed setpoint selection Bit 3 / n_set_fixed Bit 3
p1035[0...n]	BI: Motorized potentiometer setpoint raise / Mop raise
p1036[0...n]	BI: Motorized potentiometer lower setpoint / Mop lower
p1039[0...n]	BI: Motorized potentiometer inversion / Mop inversion
p1041[0...n]	BI: Motorized potentiometer manual/automatic / Mop manual/auto
p1042[0...n]	CI: Motorized potentiometer automatic setpoint / Mop auto setpoint
p1043[0...n]	BI: Motorized potentiometer accept setpoint / Mop accept set val
p1044[0...n]	CI: Motorized potentiometer setting value / Mop set val
p1051[0...n]	CI: Velocity limit RFG positive direction / v_limit RFG pos
p1051[0...n]	CI: Speed limit RFG positive direction of rotation / n_limit RFG pos

p1052[0...n]	CI: Velocity limit RFG negative direction / v_limit RFG neg
p1052[0...n]	CI: Speed limit RFG negative direction of rotation / n_limit RFG neg
p1055[0...n]	BI: Jog bit 0 / Jog bit 0
p1056[0...n]	BI: Jog bit 1 / Jog bit 1
p1070[0...n]	CI: Main setpoint / Main setpoint
p1071[0...n]	CI: Main setpoint scaling / Main setp scal
p1075[0...n]	CI: Supplementary setpoint / Suppl setpoint
p1076[0...n]	CI: Supplementary setpoint scaling / Suppl setp scal
p1085[0...n]	CI: Velocity limit positive direction / v_limit pos
p1085[0...n]	CI: Speed limit in positive direction of rotation / n_limit pos
p1088[0...n]	CI: Velocity limit negative direction / n_limit neg
p1088[0...n]	CI: Speed limit in negative direction of rotation / n_limit neg
p1110[0...n]	BI: Inhibit negative direction / Inhib neg dir
p1111[0...n]	BI: Inhibit positive direction / Inhib pos dir
p1113[0...n]	BI: Setpoint inversion / Setp inv
p1122[0...n]	BI: Bypass ramp-function generator / Bypass RFG
p1140[0...n]	BI: Ramp-function generator enable / RFG enable
p1141[0...n]	BI: Continue ramp-function generator / Continue RFG
p1142[0...n]	BI: Speed setpoint enable / n_set enable
p1142[0...n]	BI: Velocity setpoint enable / v_set enable
p1143[0...n]	BI: Ramp-function generator, accept setting value / Accept RFG set val
p1144[0...n]	CI: Ramp-function generator setting value / RFG setting value
p1155[0...n]	CI: Speed controller speed setpoint 1 / n_ctrl n_set 1
p1155[0...n]	CI: Velocity controller, velocity setpoint 1 / v_ctrl n_set 1
p1160[0...n]	CI: Speed controller speed setpoint 2 / n_ctrl n_set 2
p1160[0...n]	CI: Velocity controller, velocity setpoint 2 / v_ctrl n_set 2
p1201[0...n]	BI: Flying restart enable signal source / Fly_res enab S_src
p1230[0...n]	BI: Armature short-circuit / DC brake activation / ASC act
p1235[0...n]	BI: External armature short-circuit, contactor feedback signal / ASC ext feedback
p1330[0...n]	CI: V/f control independent voltage setpoint / Vf V_set independ.
p1356[0...n]	CI: V/f control, angular setpoint / Vf ang setpoint
p1430[0...n]	CI: Speed pre-control / n_prectrl
p1430[0...n]	CI: Velocity pre-control / v_prectrl
p1437[0...n]	CI: Speed controller, reference model I component input / n_ctrRefMod I_comp
p1440[0...n]	CI: Speed controller speed actual value / n_ctrl n_act
p1455[0...n]	CI: Speed controller P gain adaptation signal / n_ctrl Adpt_sig Kp
p1455[0...n]	CI: Velocity controller, P gain adaptation signal / v_ctrl Adpt_sig Kp
p1466[0...n]	CI: Speed controller P-gain scaling / n_ctrl Kp scal
p1466[0...n]	CI: Velocity controller P gain scaling / v_ctrl Kp scal
p1475[0...n]	CI: Speed controller torque setting value for motor holding brake / n_ctrl M_sv MHB
p1476[0...n]	BI: Speed controller hold integrator / n_ctrl integ stop
p1476[0...n]	BI: Velocity controller hold integrator / v_ctrl integ stop
p1477[0...n]	BI: Speed controller set integrator value / n_ctrl integ set
p1477[0...n]	BI: Velocity controller set integrator value / v_ctrl integ set
p1478[0...n]	CI: Speed controller integrator setting value / n_ctr integ_setVal
p1478[0...n]	CI: Velocity controller integrator value / v_ctr integ_setVal
p1479[0...n]	CI: Speed controller integrator setting value scaling / n_ctrl I_val scal
p1486[0...n]	CI: Droop compensation torque / Droop M_comp
p1492[0...n]	BI: Droop feedback enable / Droop enable
p1495[0...n]	CI: Acceleration pre-control / a_prectrl
p1497[0...n]	CI: Moment of inertia, scaling / M_mom inert scal
p1497[0...n]	CI: Motor weight scaling / Motor weight scal
p1500[0...n]	Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set

p1500[0...n]	Macro Connector Inputs (CI) for force setpoints / Macro CI F_set
p1501[0...n]	BI: Change over between closed-loop speed/torque control / Changeov n/M_ctrl
p1501[0...n]	BI: Change over velocity/force control / Changeov n/F_ctrl
p1503[0...n]	CI: Torque setpoint / M_set
p1511[0...n]	CI: Supplementary torque 1 / M_suppl 1
p1511[0...n]	CI: Supplementary force 1 / F_suppl 1
p1512[0...n]	CI: Supplementary torque 1 scaling / M_suppl 1 scal
p1512[0...n]	CI: Supplementary force 1 scaling / F_suppl 1 scal
p1513[0...n]	CI: Supplementary torque 2 / M_suppl 2
p1513[0...n]	CI: Supplementary force 2 / F_suppl 2
p1522[0...n]	CI: Torque limit upper/motoring / M_max upper/mot
p1522[0...n]	CI: Force limit upper/motoring / F_max upper/mot
p1522[0...n]	CI: Torque limit upper / M_max upper
p1523[0...n]	CI: Torque limit lower/regenerative / M_max lower/regen
p1523[0...n]	CI: Force limit lower/regenerative / F_max lower/regen
p1523[0...n]	CI: Torque limit lower / M_max lower
p1528[0...n]	CI: Torque limit upper/motoring scaling / M_max up/mot scal
p1528[0...n]	CI: Force limit upper/motoring scaling / F_max up/mot scal
p1528[0...n]	CI: Torque limit upper scaling / M_max upper scal
p1529[0...n]	CI: Torque limit lower/regenerative scaling / M_max low/gen scal
p1529[0...n]	CI: Force limit lower/regenerative scaling / F_max lo/reg scal
p1529[0...n]	CI: Torque limit lower scaling / M_max lower scal
p1540[0...n]	CI: Torque limit speed controller upper scaling / M_max n-ctr upScal
p1541[0...n]	CI: Torque limit. speed controller lower scaling / M_max nctr lowScal
p1542[0...n]	CI: Travel to fixed stop torque reduction / TfS M_red
p1542[0...n]	CI: Travel to fixed stop force reduction / TfS F_red
p1545[0...n]	BI: Activates travel to a fixed stop / TfS activation
p1550[0...n]	BI: Transfer actual torque as torque offset / Accept act torque
p1550[0...n]	BI: Transfer actual force as force offset / Accept act force
p1551[0...n]	BI: Torque limit variable/fixed signal source / M_lim var/fixS_src
p1551[0...n]	BI: Force limit variable/fixed signal source / F_lim var/fixS_src
p1552[0...n]	CI: Torque limit upper scaling without offset / M_max up w/o offs
p1552[0...n]	CI: Force limit upper scaling without offset / F_max up w/o offs
p1554[0...n]	CI: Torque limit lower scaling without offset / M_max low w/o offs
p1554[0...n]	CI: Force limit lower scaling without offset / F_max low w/o offs
p1555[0...n]	CI: Power limit / P_max
p1569[0...n]	CI: Supplementary torque 3 / M_suppl 3
p1569[0...n]	CI: Supplementary force 3 / F_suppl 3
p1571[0...n]	CI: Supplementary flux setpoint / Suppl flux setp
p1640[0...n]	CI: Excitation current actual value / I_exc_act val
p2103[0...n]	BI: 1. Acknowledge faults / 1. Acknowledge
p2104[0...n]	BI: 2. Acknowledge faults / 2. Acknowledge
p2105[0...n]	BI: 3. Acknowledge faults / 3. Acknowledge
p2106[0...n]	BI: External fault 1 / External fault 1
p2107[0...n]	BI: External fault 2 / External fault 2
p2108[0...n]	BI: External fault 3 / External fault 3
p2112[0...n]	BI: External alarm 1 / External alarm 1
p2116[0...n]	BI: External alarm 2 / External alarm 2
p2117[0...n]	BI: External alarm 3 / External alarm 3
p2144[0...n]	BI: Motor stall monitoring enable (negated) / Mot stall enab neg
p2148[0...n]	BI: Ramp-function generator active / HLG active
p2151[0...n]	CI: Speed setpoint for messages/signals / n_set for msg
p2151[0...n]	CI: Velocity setpoint for messages/signals / v_set for msg

p2154[0...n]	Cl: Speed setpoint 2 / n_set 2
p2154[0...n]	Cl: Velocity setpoint 2 / v_set 2
p2200[0...n]	Bl: Technology controller enable / Tec_ctrl enable
p2220[0...n]	Bl: Technology controller fixed value selection bit 0 / Tec_ctrl sel bit 0
p2221[0...n]	Bl: Technology controller fixed value selection bit 1 / Tec_ctrl sel bit 1
p2222[0...n]	Bl: Technology controller fixed value selection bit 2 / Tec_ctrl sel bit 2
p2223[0...n]	Bl: Technology controller fixed value selection bit 3 / Tec_ctrl sel bit 3
p2235[0...n]	Bl: Technology controller motorized potentiometer raise setpoint / Tec_ctrl mop raise
p2236[0...n]	Bl: Technology controller motorized potentiometer lower setpoint / Tec_ctrl mop lower
p2253[0...n]	Cl: Technology controller setpoint 1 / Tec_ctrl setp 1
p2254[0...n]	Cl: Technology controller setpoint 2 / Tec_ctrl setp 2
p2264[0...n]	Cl: Technology controller actual value / Tec_ctrl act val
p2286[0...n]	Bl: Hold technology controller integrator / Tec_ctr integ stop
p2289[0...n]	Cl: Technology controller pre-control signal / Tec_ctrl prectrl
p2296[0...n]	Cl: Technology controller output scaling / Tec_ctrl outp scal
p2297[0...n]	Cl: Technology controller maximum limit signal source / Tec_ctrl m_lm s_sc
p2298[0...n]	Cl: Technology controller minimum limit signal source / Tec_ctrl min_l s_s
p2299[0...n]	Cl: Technology controller limit offset / Tec_ctrl lim offs
p3111[0...n]	Bl: External fault 3, enable / Ext fault 3 enab
p3112[0...n]	Bl: External fault 3 enable negated / Ext flt 3 enab neg
p3750[0...n]	Cl: APC acceleration sensor input / APC accel input
p3784[0...n]	Bl: Sync-line-drive external increase voltage / Sync ext V incr
p3785[0...n]	Bl: Sync-line-drive external decrease voltage / Sync ext V decr
p3802[0...n]	Bl: Sync-line-drive enable / Sync enable

1.3.2 Parameters for drive data sets (DDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data Sets"

The following list contains the drive-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 4301400, Language: eng, Type: DDS

p0186[0...n]	Motor Data Sets (MDS) number / MDS number
p0187[0...n]	Encoder 1 encoder data set number / Enc 1 EDS number
p0188[0...n]	Encoder 2 encoder data set number / Enc 2 EDS number
p0189[0...n]	Encoder 3 encoder data set number / Enc 3 EDS number
p0340[0...n]	Automatic calculation, motor/control parameters / Calc auto par
p0572[0...n]	Activate inhibit list / Act inhib list
p0578[0...n]	Calculate parameters that are dependent on the technology/units / Calc tec par
p0640[0...n]	Current limit / Current limit
p0642[0...n]	Encoderless operation current reduction / Encoderl op I_red
p1001[0...n]	CO: Fixed velocity setpoint 1 / n_set_fixed 1
p1001[0...n]	CO: Fixed speed setpoint 1 / n_set_fixed 1
p1002[0...n]	CO: Fixed velocity setpoint 2 / n_set_fixed 2
p1002[0...n]	CO: Fixed speed setpoint 2 / n_set_fixed 2
p1003[0...n]	CO: Fixed velocity setpoint 3 / n_set_fixed 3
p1003[0...n]	CO: Fixed speed setpoint 3 / n_set_fixed 3
p1004[0...n]	CO: Fixed velocity setpoint 4 / n_set_fixed 4

p1004[0...n]	CO: Fixed speed setpoint 4 / n_set_fixed 4
p1005[0...n]	CO: Fixed velocity setpoint 5 / n_set_fixed 5
p1005[0...n]	CO: Fixed speed setpoint 5 / n_set_fixed 5
p1006[0...n]	CO: Fixed velocity setpoint 6 / n_set_fixed 6
p1006[0...n]	CO: Fixed speed setpoint 6 / n_set_fixed 6
p1007[0...n]	CO: Fixed velocity setpoint 7 / n_set_fixed 7
p1007[0...n]	CO: Fixed speed setpoint 7 / n_set_fixed 7
p1008[0...n]	CO: Fixed velocity setpoint 8 / n_set_fixed 8
p1008[0...n]	CO: Fixed speed setpoint 8 / n_set_fixed 8
p1009[0...n]	CO: Fixed velocity setpoint 9 / n_set_fixed 9
p1009[0...n]	CO: Fixed speed setpoint 9 / n_set_fixed 9
p1010[0...n]	CO: Fixed velocity setpoint 10 / n_set_fixed 10
p1010[0...n]	CO: Fixed speed setpoint 10 / n_set_fixed 10
p1011[0...n]	CO: Fixed velocity setpoint 11 / n_set_fixed 11
p1011[0...n]	CO: Fixed speed setpoint 11 / n_set_fixed 11
p1012[0...n]	CO: Fixed velocity setpoint 12 / n_set_fixed 12
p1012[0...n]	CO: Fixed speed setpoint 12 / n_set_fixed 12
p1013[0...n]	CO: Fixed velocity setpoint 13 / n_set_fixed 13
p1013[0...n]	CO: Fixed speed setpoint 13 / n_set_fixed 13
p1014[0...n]	CO: Fixed velocity setpoint 14 / n_set_fixed 14
p1014[0...n]	CO: Fixed speed setpoint 14 / n_set_fixed 14
p1015[0...n]	CO: Fixed velocity setpoint 15 / n_set_fixed 15
p1015[0...n]	CO: Fixed speed setpoint 15 / n_set_fixed 15
p1030[0...n]	Motorized potentiometer configuration / Mop configuration
p1037[0...n]	Motorized potentiometer maximum velocity / Mop n_max
p1037[0...n]	Motorized potentiometer maximum speed / Mop n_max
p1038[0...n]	Motorized potentiometer minimum velocity / Mop n_min
p1038[0...n]	Motorized potentiometer minimum speed / Mop n_min
p1040[0...n]	Motorized potentiometer starting value / Mop start value
p1047[0...n]	Motorized potentiometer ramp-up time / Mop ramp-up time
p1048[0...n]	Motorized potentiometer ramp-down time / Mop ramp-down time
p1058[0...n]	Jog 1 velocity setpoint / Jog 1 n_set
p1058[0...n]	Jog 1 speed setpoint / Jog 1 n_set
p1059[0...n]	Jog 2 velocity setpoint / Jog 2 n_set
p1059[0...n]	Jog 2 speed setpoint / Jog 2 n_set
p1063[0...n]	Velocity limit setpoint channel / v_limit setp
p1063[0...n]	Speed limit setpoint channel / n_limit setp
p1080[0...n]	Minimum velocity / Minimum speed
p1080[0...n]	Minimum speed / Minimum speed

1.3.3 Parameters for encoder data sets (EDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data Sets"

The following list contains the encoder-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 4301400, Language: eng, Type: EDS

p0141[0...n]	Encoder interface (Sensor Module) component number / Enc_interf comp_no
p0142[0...n]	Encoder component number / Encoder comp_no
p0144[0...n]	Sensor Module detection via LED / SM detection LED
p0145[0...n]	Activate/deactivate encoder interface / Enc_intf act/deact
r0146[0...n]	Encoder interface active/inactive / Enc_intf act/inact
r0147[0...n]	Sensor Module EPROM data version / SM EEPROM version
r0148[0...n]	Sensor Module firmware version / SM FW version
p0400[0...n]	Encoder type selection / Enc_typ sel
p0401[0...n]	Encoder type, OEM selection / Enc type OEM sel
p0402[0...n]	Gearbox type selection / Gearbox type sel
p0404[0...n]	Encoder configuration effective / Enc_config eff
p0405[0...n]	Square-wave encoder track A/B / Sq-wave enc A/B
p0407[0...n]	Linear encoder grid division / Enc grid div
p0408[0...n]	Rotary encoder pulse No. / Rot enc pulse No.
p0410[0...n]	Encoder inversion actual value / Enc inv act value
p0411[0...n]	Measuring gear, configuration / Meas gear config
p0412[0...n]	Measuring gear, absolute encoder, rotary, revolutions, virtual / Abs rot rev
p0413[0...n]	Measuring gear, position tracking tolerance window / Pos track window
p0414[0...n]	Redundant coarse position value relevant bits (identified) / Relevant bits
p0415[0...n]	Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB
p0418[0...n]	Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1
p0419[0...n]	Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2
p0420[0...n]	Encoder connection / Enc_connection
p0421[0...n]	Absolute encoder rotary multiturn resolution / Enc abs multiturn
p0422[0...n]	Absolute encoder linear measuring step resolution / Enc abs meas step
p0423[0...n]	Absolute encoder rotary singleturn resolution / Enc abs singleturn
p0424[0...n]	Encoder, linear zero mark distance / Enc lin ZM_dist
p0425[0...n]	Encoder, rotary zero mark distance / Enc rot dist ZM
p0426[0...n]	Encoder zero mark differential distance / Enc diff distance
p0427[0...n]	Encoder SSI baud rate / Enc SSI baud rate
p0428[0...n]	Encoder SSI monoflop time / Enc SSI t_monoflop
p0429[0...n]	Encoder SSI configuration / Enc SSI config
p0430[0...n]	Sensor Module configuration / SM config
p0431[0...n]	Angular commutation offset / Ang_com offset
p0432[0...n]	Gearbox factor, encoder revolutions / Grbx_fact enc_rev
p0433[0...n]	Gearbox factor, motor/load revolutions / Grbx_fact mot_rev
p0434[0...n]	Encoder SSI error bit / Enc SSI error bit
p0435[0...n]	Encoder SSI alarm bit / Enc SSI alarm bit
p0436[0...n]	Encoder SSI parity bit / Enc SSI parity bit
p0437[0...n]	Sensor Module configuration extended / SM config ext
p0438[0...n]	Squarewave encoder filter time / Enc t_filt
p0439[0...n]	Encoder ramp-up time / Enc ramp-up time

p0440[0...n]	Copy encoder serial number / Copy enc ser_no
p0441[0...n]	Encoder commissioning serial number part 1 / Enc comm ser_no 1
p0442[0...n]	Encoder commissioning serial number part 2 / Enc comm ser_no 2
p0443[0...n]	Encoder commissioning serial number part 3 / Enc comm ser_no 3
p0444[0...n]	Encoder commissioning serial number part 4 / Enc comm ser_no 4
p0445[0...n]	Encoder commissioning serial number part 5 / Enc comm ser_no 5
p0446[0...n]	Encoder SSI number of bits before the absolute value / Enc SSI bit before
p0447[0...n]	Encoder SSI number of bits absolute value / Enc SSI bit val
p0448[0...n]	Encoder SSI number of bits after the absolute value / Enc SSI bit after
p0449[0...n]	Encoder SSI number of bits, filler bits / Enc SSI fill bits
p0453[0...n]	Measuring time pulse encoder evaluation zero speed / t_meas enc_eva n_0
p0493[0...n]	Zero mark selection, input terminal / ZM_sel inp_term
p2507[0...n]	LR absolute encoder adjustment status / Abs_enc_adj stat
p2525[0...n]	CO: LR encoder adjustment, offset / Enc_adj offset
p4600[0...n]	Motor temperature sensor 1 sensor type / Temp_sens 1 type
p4601[0...n]	Motor temperature sensor 2 sensor type / Temp_sens 2 type
p4602[0...n]	Motor temperature sensor 3 sensor type / Temp_sens 3 type
p4603[0...n]	Motor temperature sensor 4 sensor type / Temp_sens 4 type
p4670[0...n]	Analog sensor configuration / Ana_sens config
p4671[0...n]	Analog sensor input / Ana_sens inp
p4672[0...n]	Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0
p4673[0...n]	Analog sensor channel A voltage per encoder period / Ana_sens A U/per
p4674[0...n]	Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0
p4675[0...n]	Analog sensor channel B voltage per encoder period / Ana_sens B U/per
p4676[0...n]	Analog sensor range limit threshold / Ana_sens lim thr
p4677[0...n]	Analog sensor LVDT configuration / Ana_sens LVDT conf
p4680[0...n]	Zero mark monitoring tolerance permissible / ZM_monit tol perm
p4681[0...n]	Zero mark monitoring, tolerance window limit 1 positive / ZM tol lim 1 pos
p4682[0...n]	Zero mark monitoring, tolerance window limit 1 negative / ZM tol lim 1 neg
p4683[0...n]	Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos
p4684[0...n]	Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg
p4685[0...n]	Speed actual value mean value generation / n_act mean val
p4686[0...n]	Zero mark minimum length / ZM min length

1.3.4 Parameters for motor data sets (MDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data Sets"

The following list contains the motor-data-set-dependent parameters.

Product: SINAMICS S120/S150, Version: 4301400, Language: eng, Type: MDS

p0131[0...n]	Motor component number / Mot comp_no
p0300[0...n]	Motor type selection / Mot type sel
p0301[0...n]	Motor code number selection / Mot code No. sel
r0302[0...n]	Motor code number of motor with DRIVE-CLiQ / Motor code Mot DLQ
r0303[0...n]	Motor status word of motor with DRIVE-CLiQ / Mot ZSW Mot DLQ
p0304[0...n]	Rated motor voltage / Mot V_rated
p0305[0...n]	Rated motor current / Mot I_rated

p0306[0...n]	Number of motors connected in parallel / Motor qty
p0307[0...n]	Rated motor power / Mot P _{rated}
p0308[0...n]	Rated motor power factor / Mot cos_phi _{rated}
p0309[0...n]	Rated motor efficiency / Mot eta _{rated}
p0310[0...n]	Rated motor frequency / Mot f _{rated}
p0311[0...n]	Rated motor speed / Mot n _{rated}
p0311[0...n]	Rated motor velocity / Mot v _{rated}
p0312[0...n]	Rated motor torque / Mot M _{rated}
p0312[0...n]	Rated motor force / Mot F _{rated}
r0313[0...n]	Motor pole pair number, actual (or calculated) / Mot PolePairNo act
p0314[0...n]	Motor pole pair number / Mot pole pair No.
p0315[0...n]	Motor pole pair width / MotPolePair width
p0316[0...n]	Motor torque constant / Mot kT
p0316[0...n]	Motor force constant / Mot kT
p0317[0...n]	Motor voltage constant / Mot kE
p0318[0...n]	Motor stall current / Mot I _{standstill}
p0319[0...n]	Motor stall torque / Mot M _{standstill}
p0319[0...n]	Motor stall force / Mot F _{standstill}
p0320[0...n]	Motor rated magnetizing current/short-circuit current / Mot I _{mag_{rated}}
p0322[0...n]	Maximum motor speed / Mot n _{max}
p0322[0...n]	Motor maximum velocity / Mot v _{max}
p0323[0...n]	Maximum motor current / Mot I _{max}
p0324[0...n]	Winding maximum speed / Winding n _{max}
p0324[0...n]	Winding maximum velocity / Winding v _{max}
p0325[0...n]	Motor pole position identification current, 1st phase / Mot PolID I 1st ph
p0326[0...n]	Motor stall torque correction factor / Mot M _{stall_corr}
p0326[0...n]	Motor stall force correction factor / Mot F _{stall_corr}
p0327[0...n]	Optimum motor load angle / Mot phi _{load opt}
p0328[0...n]	Motor reluctance torque constant / Mot kT _{reluctance}
p0328[0...n]	Motor reluctance force constant / Mot kT _{reluctance}
p0329[0...n]	Motor pole position identification current / Mot PolID current
r0330[0...n]	Rated motor slip / Mot slip _{rated}
r0331[0...n]	Actual motor magnetizing current/short-circuit current / Mot I _{mag_{rtd act}}
r0332[0...n]	Rated motor power factor / Mot cos_phi _{rated}
r0333[0...n]	Rated motor torque / Mot M _{rated}
r0334[0...n]	Actual motor-torque constant / Mot kT act
r0334[0...n]	Actual motor force constant / Mot kT act
p0335[0...n]	Motor cooling type / Motor cooling type
r0336[0...n]	Actual rated motor frequency / Mot f _{rated act}
r0337[0...n]	Rated motor EMF / Mot EMF _{rated}
p0338[0...n]	Motor limit current / Mot I _{limit}
r0339[0...n]	Rated motor voltage / Mot V _{rated}
p0341[0...n]	Motor moment of inertia / Mot M _{mom of inert}
p0341[0...n]	Motor weight / Mot weight
p0342[0...n]	Ratio between the total and motor moment of inertia / Mot MomInert Ratio
p0342[0...n]	Ratio between the total and motor force of inertia / Mot MomInert Ratio
r0343[0...n]	Identified motor rated current / Mot I _{rated ident}
p0344[0...n]	Motor weight (for the thermal motor model) / Mot weight th mod
r0345[0...n]	Nominal motor starting time / Mot t _{start_{rated}}
p0346[0...n]	Motor excitation build-up time / Mot t _{excitation}
p0347[0...n]	Motor de-excitation time / Mot t _{de-excitat.}
p0348[0...n]	Speed at the start of field weakening V _{dc} = 600 V / Mot n _{field weaken}
p0348[0...n]	Velocity at the start of field weakening V _{dc} = 600 V / Mot v _{field weaken}

p0350[0...n]	Motor stator resistance, cold / Mot R_stator cold
p0352[0...n]	Cable resistance / Mot R_cable cold
p0353[0...n]	Motor series inductance / Mot L_series
p0354[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R_r cold / RDd
p0355[0...n]	Motor damping resistance, q axis / Mot R_damp q
p0356[0...n]	Motor stator leakage inductance / Mot L_stator leak.
p0357[0...n]	Motor stator inductance, d axis / Mot L_stator d
p0358[0...n]	Motor rotor leakage inductance / damping inductance, d axis / Mot L_r leak / LDd
p0359[0...n]	Motor damping inductance, q axis / Mot L_damp q
p0360[0...n]	Motor magnetizing inductance/magn. inductance, d axis saturated / Mot Lh/Lh d sat
p0361[0...n]	Motor magnetizing inductance q axis, saturated / Mot L_magn q sat
p0362[0...n]	Saturation characteristic flux 1 / Mot saturat.flux 1
p0363[0...n]	Saturation characteristic flux 2 / Mot saturat.flux 2
p0364[0...n]	Saturation characteristic flux 3 / Mot saturat.flux 3
p0365[0...n]	Saturation characteristic flux 4 / Mot saturat.flux 4
p0366[0...n]	Saturation characteristic I_mag 1 / Mot sat. I_mag 1
p0367[0...n]	Saturation characteristic I_mag 2 / Mot sat. I_mag 2
p0368[0...n]	Saturation characteristic I_mag 3 / Mot sat. I_mag 3
p0369[0...n]	Saturation characteristic I_mag 4 / Mot sat. I_mag 4
r0370[0...n]	Motor stator resistance, cold / Mot R_stator cold
r0372[0...n]	Cable resistance / Mot R_cable
r0373[0...n]	Motor rated stator resistance / Mot R_stator rated
r0374[0...n]	Motor rotor resistance cold / damping resistance d axis / Mot R_r cold / RDd
r0375[0...n]	Motor damping resistance, q axis / Mot R_damp q
r0376[0...n]	Rated motor rotor resistance / Mot R_rotor rated
r0377[0...n]	Motor leakage inductance, total / Mot L_leak total
r0378[0...n]	Motor stator inductance, d axis / Mot L_stator_d
r0380[0...n]	Motor damping inductance, d axis / Mot L_damping_d
r0381[0...n]	Motor damping inductance, q axis / Mot L_damping_q
r0382[0...n]	Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat
r0383[0...n]	Motor magnetizing inductance q axis, saturated / Mot L_magn q sat
r0384[0...n]	Motor rotor time constant / damping time constant d axis / Mot T_rotor/T_Dd
r0385[0...n]	Motor damping time constant, q axis / Mot T_Dq
r0386[0...n]	Motor stator leakage time constant / Mot T_stator leak
r0387[0...n]	Motor stator leakage time constant, q axis / Mot T_Sleak /T_Sq
p0389[0...n]	Excitation rated no-load current / Exc I_noload Rated
p0390[0...n]	Rated excitation current / Exc I_Rated
p0391[0...n]	Current controller adaptation, starting point KP / I_adapt pt KP
p0392[0...n]	Current controller adaptation, starting point KP adapted / I_adapt pt KP adap
p0393[0...n]	Current controller adaptation p gain adaptation / I_adapt Kp adapt
p0393[0...n]	Current controller adaptation P gain scaling / I_adapt Kp scal
r0395[0...n]	Actual stator resistance / R_stator act
r0396[0...n]	Actual rotor resistance / R_rotor act
p0398[0...n]	Angle magnet. decoupling (cross saturation) coeff 1 / Magn decoupl C1
p0399[0...n]	Angle magnet. decoupling (cross saturation) coeff 3 / Magn decoupl C3
p0530[0...n]	Bearing type selection / Bearing type sel
p0531[0...n]	Bearing code number selection / Bear. code num sel
p0532[0...n]	Bearing maximum speed / Bearing n_max
p0532[0...n]	Bearing maximum velocity / Bearing v_max
p0600[0...n]	Motor temperature sensor for monitoring / Mot temp_sensor
p0601[0...n]	Motor temperature sensor type / Mot_temp_sens type
p0604[0...n]	Motor temperature alarm threshold / Mot_temp al thr
p0605[0...n]	Motor temperature fault threshold / Mot_temp flt thr

p0606[0...n]	Motor temperature timer / Mot_temp timer
p0607[0...n]	Temperature sensor fault timer / Sensor fault time
p0610[0...n]	Motor overtemperature response / Mot temp response
p0611[0...n]	I2t motor model thermal time constant / I2t mot_mod T
p0612[0...n]	Thermal motor model configuration / Therm Mot_mod conf
p0615[0...n]	I2t motor model fault threshold / I2t mot_mod thresh
p0616[0...n]	Motor overtemperature alarm threshold 1 / Mot temp alarm 1
p0620[0...n]	Thermal adaptation, stator and rotor resistance / Mot therm_adapt R
p0621[0...n]	Identification stator resistance after restart / Rst_ident Restart
p0622[0...n]	Motor excitation time for Rs_ident after powering up again / t_excit Rs_id
p0624[0...n]	Motor Temperature Offset PT100 / Mot T_offset PT100
p0625[0...n]	Motor ambient temperature / Mot T_ambient
p0626[0...n]	Motor overtemperature, stator core / Mot T_over core
p0627[0...n]	Motor overtemperature, stator winding / Mot T_over stator
p0628[0...n]	Motor overtemperature rotor winding / Mot T_over rotor
r0630[0...n]	Motor temperature model ambient temperature / MotTMod T_amb.
r0631[0...n]	Motor temperature model, stator core temperature / MotTMod T_core
r0632[0...n]	Motor temperature model, stator winding temperature / MotTMod T_copper
r0633[0...n]	Motor temperature model, rotor temperature / MotTMod T_rotor
p0634[0...n]	Q flux flux constant unsaturated / PSIQ KPSI UNSAT
p0635[0...n]	Q flux quadrature axis current constant unsaturated / PSIQ KIQ UNSAT
p0636[0...n]	Q flux direct axis current constant unsaturated / PSIQ KID UNSAT
p0637[0...n]	Q flux flux gradient saturated / PSIQ Grad SAT
p0643[0...n]	Overvoltage protection for synchronous motors / Overvolt_protect
p0645[0...n]	Motor kT characteristic kT1 / Mot kT char kT1
p0646[0...n]	Motor kT characteristic kT3 / Mot kT char kT3
p0647[0...n]	Motor kT characteristic kT5 / Mot kT char kT5
p0648[0...n]	Motor kT characteristic kT7 / Mot kT char kT7
p0650[0...n]	Actual motor operating hours / Mot t_oper act
p0651[0...n]	Motor operating hours maintenance interval / Mot t_op maint
p0652[0...n]	Motor stator resistance, scaling / Mot R_stator scal
p0653[0...n]	Motor stator leakage inductance, scaling / Mot L_S_leak scal
p0655[0...n]	Motor magnetizing inductance, d axis saturated scaling / Mot L_m d sat scal
p0656[0...n]	Motor magnetizing inductance, q axis, saturated scaling / Mot L_m q sat scal
p0657[0...n]	Motor damping inductance, d axis scaling / Mot L_damp d scal
p0658[0...n]	Motor damping inductance, q axis scaling / Mot L_damp q scal
p0659[0...n]	Motor damping resistance, d axis scaling / Mot R_damp d scal
p0660[0...n]	Motor damping resistance, q axis scaling / Mot R_damp q scal
p0826[0...n]	Motor changeover, motor number / Mot_chng mot No.
p0827[0...n]	Motor changeover status word bit number / Mot_chg ZSW bitNo.
p1231[0...n]	Armature short-circuit / DC brake configuration / ASC config
p1232[0...n]	DC braking, braking current / DCBRK I_brake
p1233[0...n]	DC braking time / DCBRK time
p1234[0...n]	Speed at the start of DC braking / DCBRK n_start
p1234[0...n]	DC braking, starting velocity / DCBRK v_start
p1236[0...n]	Ext. armature short-cct., contactor feedback signal monit. time / ASC ext t_monit
p1237[0...n]	External armature short-circuit, waiting time when opening / ASC ext t_wait
p1909[0...n]	Motor data identification control word / MotID STW
p1958[0...n]	Rotating measurement ramp-up/ramp-down time / Rot meas t_r up/dn
p1958[0...n]	Moving measurement ramp-up/ramp-down time / Mov meas t_r up/dn
p1959[0...n]	Rotating measurement configuration / Rot meas config
p1959[0...n]	Moving measurement configuration / Mov meas config
p1980[0...n]	Pole position identification technique / PolID technique

p1981[0...n]	Pole position identification maximum distance / PolID distance max
p1982[0...n]	Pole position identification selection / PolID selection
p1991[0...n]	Motor changeover, angular commutation correction / Ang_com corr
p1993[0...n]	Pole position identification current, motion-based / PolID I mot_bas
p1994[0...n]	Pole position identification rise time motion-based / PolID T mot_bas
p1995[0...n]	Pole position identification gain, motion-based / PolID kp mot_bas
p1996[0...n]	Pole position identification, integral time motion-based / PolID Tn mot_bas
p1997[0...n]	Pole position identification, smoothing time motion-based / PolID t_sm mot_bas
p1999[0...n]	Ang. commutation offset calibr. and pole position ID - scaling / ComOffsCalib scal
p3049[0...n]	MotId Speed at start of field weakening identified / ident
p3049[0...n]	MotId Speed at start of field weakening identified / v_Fieldweak ident
p3050[0...n]	MotId stator resistance identified / R_stator ident
p3054[0...n]	MotId rotor resistance identified / R_rotor ident
p3056[0...n]	MotId stator leakage inductance identified / L_stator leak
p3058[0...n]	MotId rotor leakage inductance identified / L_rotor leak
p3060[0...n]	MotId magnetizing inductance identified / MotId Lh ident
p4610[0...n]	Motor temperature sensor 1 sensor type MDS / Temp sens1 typ MDS
p4611[0...n]	Motor temperature sensor 2 sensor type MDS / Temp sens2 typ MDS
p4612[0...n]	Motor temperature sensor 3 sensor type MDS / Temp sens3 typ MDS
p4613[0...n]	Motor temperature sensor 4 sensor type MDS / Temp sens4 typ MDS

1.3.5 Parameters for power unit data sets (PDS)

Note:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions
Section "Data Sets"

The following list contains the parameters that are dependent on the power unit data sets.

Product: SINAMICS S120/S150, Version: 4301400, Language: eng, Type: PDS

p0121[0...n]	Power unit component number / PU comp_no
p0124[0...n]	Power unit detection via LED / PU detection LED
p0125[0...n]	Activate/deactivate power unit components / PU_comp act/deact
r0126[0...n]	Power unit components active/inactive / PU comp act/inact
r0127[0...n]	Power unit version EPROM data / PU EPROM version
r0128[0...n]	Power unit, firmware version / PU FW version
r0200[0...n]	Power unit code number actual / PU code no. act
p0201[0...n]	Power unit code number / PU code no
r0203[0...n]	Actual power unit type / PU actual type
r0204[0...n]	Power unit hardware properties / PU HW property
p0251[0...n]	Operating hours counter power unit fan / PU fan t_oper
p0254[0...n]	Power unit internal fan operating hours counter / PU int fan t_oper
p0895[0...n]	BI: Activate/deactivate power unit components / PU_comp act/deact
p3469[0...n]	Latch delay time correction, zero crossover detection / t_latch corr PLL
p3901[0...n]	Power unit EEPROM Vdc offset calibration / PU EEPROM Vdc_offs
p7001[0...n]	Par_circuit power units enable / PU enable
r7002[0...n]	Par_circuit status power units / Status PU
r7020[0...n]	CO: Par_circuit deviation current in phase U / Phase U curr dev
r7021[0...n]	CO: Par_circuit deviation current in phase V / Phase V curr dev
r7022[0...n]	CO: Par_circuit deviation current in phase W / Phase W curr dev

r7030[0...n]	CO: Par_circuit DC link voltage deviation / Vdc deviation
p7040[0...n]	Par_circuit correction valve lockout time phase U / Comp t_lockout U
p7042[0...n]	Par_circuit correction valve lockout time phase V / Comp t_lockout V
p7044[0...n]	Par_circuit correction valve lockout time phase W / Comp t_lockout W
r7050[0...n]	Par_circuit circulating current phase U / Circ_I_phase U
r7051[0...n]	Par_circuit circulating current phase V / Circ_I_phase V
r7052[0...n]	Par_circuit circulating current phase W / Circ_I_phase W
r7200[0...n]	Par_circuit power unit overload I2T / PU overload I2T
r7201[0...n]	CO: Par_circuit power unit temperatures max. inverter / PU temp max inv
r7202[0...n]	Par_circuit power unit temperatures max. depletion layer / PU TempMaxDepLayer
r7203[0...n]	Par_circuit power unit temperatures max. rectifier / PU temp max rect
r7204[0...n]	Par_circuit power unit temperatures air intake / PU temp air intake
r7205[0...n]	Par_circuit power unit temperatures electronics / PU temp electr
r7206[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp inv 1
r7207[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp inv 2
r7208[0...n]	Par_circuit power unit temperatures inverter 3 / PU temp inv 3
r7209[0...n]	Par_circuit power unit temperatures inverter 4 / PU temp inv 4
r7210[0...n]	Par_circuit power unit temperatures inverter 5 / PU temp inv 5
r7211[0...n]	Par_circuit power unit temperatures inverter 6 / PU temp inv 6
r7212[0...n]	Par_circuit power unit temperatures inverter 1 / PU temp rect 1
r7213[0...n]	Par_circuit power unit temperatures inverter 2 / PU temp rect 2
r7214[0...n]	Par_circuit power unit temperatures depletion layer 1 / PU temp DepLayer 1
r7215[0...n]	Par_circuit power unit temperatures depletion layer 2 / PU temp DepLayer 2
r7216[0...n]	Par_circuit power unit temperatures depletion layer 3 / PU temp DepLayer 3
r7217[0...n]	Par_circuit power unit temperatures depletion layer 4 / PU temp DepLayer 4
r7218[0...n]	Par_circuit power unit temperatures depletion layer 5 / PU temp DepLayer 5
r7219[0...n]	Par_circuit power unit temperatures depletion layer 6 / PU temp DepLayer 6
r7220[0...n]	Infeed par_circuit absolute current value motoring permissible / INF I_abs mot perm
r7220[0...n]	CO: Par_circuit drive output current maximum / Drv I_outp max
r7221[0...n]	Infeed par_circuit absolute current regenerating permissible / INF I_absRegenPerm
r7222[0...n]	CO: Par_circuit absolute current actual value / I_act abs val
r7223[0...n]	CO: Par_circuit phase current actual value phase U / I_phase U act val
r7224[0...n]	CO: Par_circuit phase current actual value phase V / I_phase V act val
r7225[0...n]	CO: Par_circuit phase current actual value phase W / I_phase W act val
r7226[0...n]	CO: Par_circuit phase current actual value phase U offset / I_phase U offset
r7227[0...n]	CO: Par_circuit phase current actual value phase V offset / I_phase V offset
r7228[0...n]	CO: Par_circuit phase current actual value phase W offset / I_phase W offset
r7229[0...n]	CO: Par_circuit phase current actual value sum U, V, W / I_phase sum UVW
r7230[0...n]	CO: Par_circuit DC link voltage actual value / Vdc_act
r7231[0...n]	CO: Par_circuit phase voltage actual value phase U / V_phase U act val
r7232[0...n]	CO: Par_circuit phase voltage actual value phase V / V_phase V act val
r7233[0...n]	CO: Par_circuit phase voltage actual value phase W / V_phase W act val
r7240[0...n]	Par_circuit gating unit status word 1 / Gating unit ZSW1

2.33	Auxiliary circuits	2-1719
2.34	Voltage Sensing Module (VSM)	2-1722
2.35	Basic Operator Panel 20 (BOP20)	2-1726
2.36	External brake module	2-1728

2.1 Table of contents

2.2 Explanations for the function diagrams	2-1384
1020 – Explanations of the symbols (Part 1)	2-1385
1021 – Explanations of the symbols (Part 2)	2-1386
1022 – Explanations of the symbols (Part 3)	2-1387
1030 – Handling BICO technology	2-1388
2.3 Overviews	2-1389
1510 – CU320-2 input/output terminals	2-1390
1512 – CX32 input/output terminals	2-1391
1520 – PROFIdrive	2-1392
1530 – Internal control/status words, data sets	2-1393
1550 – Setpoint channel	2-1394
1580 – Servo control, encoder evaluations (position, speed, temperature)	2-1395
1590 – Servo control, speed control and V/f control	2-1396
1610 – Servo control, formation of the torque limits	2-1397
1630 – Servo control, current control	2-1398
1680 – Vector control, encoder evaluations (position, speed, temperature)	2-1399
1690 – Vector control, V/f control	2-1400
1700 – Vector control, speed control, and generation of torque limits	2-1401
1710 – Vector control, current control	2-1402
1750 – Monitoring functions, faults, alarms	2-1403
1773 – Basic Infeed	2-1404
1774 – Active Infeed	2-1405
1775 – Smart Infeed	2-1406
1780 – Terminal Module 15 (TM15)	2-1407
1781 – Terminal Module 15 for SINAMICS (TM15DI/DO)	2-1408
1782 – Terminal Module 17 High Feature (TM17 High Feature)	2-1409
1790 – Terminal Board 30 (TB30)	2-1410
1840 – Terminal Module 31 (TM31)	2-1411
1842 – Terminal Module 41 (TM41)	2-1412
1850 – Terminal Module 54F (TM54F)	2-1413

2.4	CU320-2 input/output terminals	2-1414
2120	Digital inputs, isolated (DI 0 to DI 3, DI 16, DI 17)	2-1415
2121	Digital inputs, isolated (DI 4 to DI 7, DI 20, DI 21)	2-1416
2130	Digital inputs/outputs, bidirectional (DI/DO 8 to DI/DO 9)	2-1417
2131	Digital inputs/outputs, bidirectional (DI/DO 10 to DI/DO 11)	2-1418
2132	Digital inputs/outputs, bidirectional (DI/DO 12 to DI/DO 13)	2-1419
2133	Digital inputs/outputs, bidirectional (DI/DO 14 to DI/DO 15)	2-1420
2.5	CU_LINK	2-1421
2211	Data transfer	2-1422
2.6	CX32-2 input/output terminals	2-1423
2220	Digital inputs, isolated (DI 0 to DI 3, DI 16, DI 17)	2-1424
2230	Digital inputs/outputs, bidirectional (DI/DO 8 to DI/DO 9)	2-1425
2231	Digital inputs/outputs, bidirectional (DI/DO 10 to DI/DO 11)	2-1426
2.7	PROFIdrive	2-1427
2410	PROFIBUS (PB) / PROFINET (PN), addresses and diagnostics	2-1429
2420	Standard telegrams and process data (PZD)	2-1430
2422	Manufacturer-specific telegrams and process data (PZD)	2-1431
2423	Manufacturer-specific/free telegrams and process data (PZD)	2-1432
2425	STW1_BM control word for metals sector interconnection (p2038 = 0)	2-1433
2426	STW2_BM control word for metals sector interconnection (p2038 = 0)	2-1434
2427	E_STW1_BM control word infeed for metals sector interconnection	2-1435
2428	ZSW1_BM control word for metals sector interconnection (p2038 = 0)	2-1436
2429	ZSW2_BM status word for metals sector interconnection (p2038 = 0)	2-1437
2430	E_ZSW1_BM control word infeed for metals sector interconnection	2-1438
2433	STW2_ENC control word for ENCODER interconnection	2-1439
2434	ZSW2_ENC status word for ENCODER interconnection	2-1440
2439	PZD receive signals interconnection, profile-specific	2-1441
2440	PZD incoming signals interconnection, manufacturer-specific	2-1442
2441	STW1 control word interconnection (p2038 = 2)	2-1443
2442	STW1 control word interconnection (p2038 = 0)	2-1444
2443	STW1 control word interconnection (p2038 = 1)	2-1445
2444	STW2 control word interconnection (p2038 = 0)	2-1446
2445	STW2 control word interconnection (p2038 = 1)	2-1447
2447	E_STW1 control word infeed interconnection	2-1448

2449 – PZD outgoing signals interconnection, profile-specific	2-1449
2450 – PZD outgoing signals interconnection, manufacturer-specific	2-1450
2451 – ZSW1 status word interconnection (p2038 = 2)	2-1451
2452 – ZSW1 status word interconnection (p2038 = 0)	2-1452
2453 – ZSW1 status word interconnection (p2038 = 1)	2-1453
2454 – ZSW2 status word interconnection (p2038 = 0)	2-1454
2455 – ZSW2 status word interconnection (p2038 = 1)	2-1455
2456 – MELDW status word interconnection	2-1456
2457 – E_ZSW1 status word infeed interconnection	2-1457
2462 – POS_STW positioning control word interconnection (r0108.4 = 1)	2-1458
2463 – POS_STW1 positioning control word 1 interconnection (r0108.4 = 1)	2-1459
2464 – POS_STW2 positioning control word 2 interconnection (r0108.4 = 1)	2-1460
2466 – POS_ZSW1 positioning status word 1 interconnection (r0108.4 = 1)	2-1461
2467 – POS_ZSW2 positioning status word 2 interconnection (r0108.4 = 1)	2-1462
2468 – IF1 incoming telegram, free interconnection via BICO (p0922 = 999)	2-1463
2470 – IF1 outgoing telegram, free interconnection via BICO (p0922 = 999)	2-1464
2472 – IF1 status words, free interconnection	2-1465
2475 – STW1 control word 1 interconnection (r0108.4 = 1)	2-1466
2476 – SATZANW-Pos block selection interconnection (r0108.4 = 1)	2-1467
2479 – ZSW1 status word 1 interconnection (r0108.4 = 1)	2-1468
2480 – MDI_MOD-MDI mode interconnection (r0108.4 = 1)	2-1469
2481 – IF1 receive telegram, free interconnection via BICO (p0922 = 999)	2-1470
2483 – IF1 send telegram, free interconnection via BICO (p0922 = 999)	2-1471
2485 – IF2 receive telegram, free interconnection via BICO (p0922 = 999)	2-1472
2487 – IF2 send telegram, free interconnection via BICO (p0922 = 999)	2-1473
2489 – IF2 status words, free interconnection	2-1474
2491 – IF2 receive telegram, free interconnection via BICO (p0922 = 999)	2-1475
2493 – IF2 send telegram, free interconnection via BICO (p0922 = 999)	2-1476
2495 – CU_STW1 control word 1, Control Unit interconnection	2-1477
2496 – CU_ZSW1 status word 1, Control Unit interconnection	2-1478
2497 – A_DIGITAL interconnection	2-1479
2498 – E_DIGITAL interconnection	2-1480
2.8 Internal control/status words	2-1481
2501 – Control word sequence control	2-1482
2503 – Status word sequence control	2-1483

2505 – Control word setpoint channel	2-1484
2520 – Control word, speed controller	2-1485
2522 – Status word, speed controller	2-1486
2526 – Status word, closed loop control	2-1487
2530 – Status word, current control	2-1488
2534 – Status word, monitoring functions 1	2-1489
2536 – Status word, monitoring functions 2	2-1490
2537 – Status word, monitoring functions 3	2-1491
2546 – Control word faults/alarms	2-1492
2548 – Status word faults/alarms 1 and 2	2-1493
 2.9 Sequence control	 2-1494
2610 – Sequencer	2-1495
2634 – Missing enable signals, line contactor control, logic operation	2-1496
 2.10 Brake control	 2-1497
2701 – Basic brake control (r0108.14 = 0)	2-1498
2704 – Extended brake control, stationary state detection (r0108.14 = 1)	2-1499
2707 – Extended brake control, open/close brake (r0108.14 = 1)	2-1500
2711 – Extended brake control, signal outputs (r0108.14 = 1)	2-1501
 2.11 Safety Integrated	 2-1502
2800 – Basic functions, parameter manager	2-1503
2802 – Basic functions, monitoring and faults/alarms	2-1504
2804 – Basic functions, status words	2-1505
2810 – Basic functions, STO (Safe Torque Off)/SS1 (Safe Stop 1)	2-1506
2814 – Basic functions, SBC (Safe Brake Control)	2-1507
2820 – Extended functions, SLS	2-1508
2825 – Extended functions, SS1, SS2, SOS, internal STOP B, C, D, F	2-1509
2840 – Extended functions, control word and status word	2-1510
2846 – Extended functions, parameter manager	2-1511
2847 – Extended functions, TM54F parameter manager	2-1512
2848 – Extended functions, TM54F configuration, F-DI/F-DO test	2-1513
2850 – Extended functions, TM54F (F-DI 0 to F-DI 4)	2-1514
2851 – Extended functions, TM54F (F-DI 5 to F-DI 9)	2-1515
2853 – Extended functions, TM54F (F-DO 0 to F-DO 3, DI 20 to DI 23)	2-1516
2855 – Extended functions, TM54F control interface	2-1517

2856 – Extended functions, TM54F safe state selection	2-1518
2857 – Extended functions, TM54F assignment (F-DO 0 to F-DO 3)	2-1519
2.12 Setpoint channel	2-1520
3010 – Fixed speed setpoints	2-1521
3020 – Motorized potentiometer	2-1522
3030 – Main/additional setpoint, setpoint scaling, jogging	2-1523
3040 – Direction of rotation limitation and reversal	2-1524
3050 – Skip frequency bands and speed limiting	2-1525
3060 – Basic ramp-function generator	2-1526
3070 – Extended ramp-function generator	2-1527
3080 – Ramp-function generator selection, status word, tracking	2-1528
3090 – Dynamic Servo Control (DSC)	2-1529
2.13 Setpoint channel not activated	2-1530
3095 – Formation of the speed limits (r0108.8 = 0)	2-1531
2.14 Basic positioner (EPOS)	2-1532
3610 – Jog mode (r0108.4 = 1)	2-1533
3612 – Referencing/reference point approach mode (r0108.4 = 1) (p2597 = 0 signal) .	2-1534
3614 – Flying referencing mode (r0108.4 = 1) (p2597 = 1 signal)	2-1535
3615 – Traversing blocks, external block change mode (r0108.4 = 1)	2-1536
3616 – Traversing blocks mode (r0108.4 = 1)	2-1537
3617 – Travel to fixed stop	2-1538
3618 – Direct setpoint entry/MDI mode, dynamic values (r0108.4 = 1)	2-1539
3620 – Direct setpoint entry/MDI (r0108.4 = 1)	2-1540
3625 – Mode control (r0108.4 = 1)	2-1541
3630 – Traversing range limits (r0108.4 = 1)	2-1542
3635 – Interpolator (r0108.4 = 1)	2-1543
3640 – Control word block selection/MDI selection (r0108.4 = 1)	2-1544
3645 – Status word 1 (r0108.3 = 1, r0108.4 = 1)	2-1545
3646 – Status word 2 (r0108.3 = 1, r0108.4 = 1)	2-1546
3650 – Status word active traversing block/MDI active (r0108.4 = 1)	2-1547
2.15 Closed-loop position control	2-1548
4010 – Actual position value preprocessing (r0108.3 = 1)	2-1549
4015 – Position controller (r0108.3 = 1)	2-1550

4020 – Standstill/positioning monitoring (r0108.3 = 1)	2-1551
4025 – Dynamic following error monitoring, cam controllers (r0108.3 = 1)	2-1552
2.16 Encoder evaluation	2-1553
4704 – Position and temperature sensing, encoder 1 to 3	2-1554
4710 – Actual speed value and pole position sensing, motor encoder (encoder 1)	2-1555
4711 – Actual speed value sensing, encoder 2, 3 (r0108.7 = 1, APC activated)	2-1556
4715 – Actual speed value and pole position sensing, ASM/SM motor encoder (encoder 1)	2-1557
4720 – Encoder interface, incoming signals, encoder 1 to 3	2-1558
4730 – Encoder interface, outgoing signals, encoder 1 to 3	2-1559
4735 – Reference mark search with external zero mark, encoder 1 to 3	2-1560
4740 – Measuring probe evaluation, measured value memory, encoder 1 to 3	2-1561
2.17 Servo control	2-1562
5020 – Speed setpoint filter and speed pre-control	2-1563
5030 – Reference model/pre-control balancing/speed limitation	2-1564
5040 – Speed controller with encoder	2-1565
5042 – Speed controller, torque-speed pre-control with encoder (p1402.4 = 1)	2-1566
5050 – Kp_n-/Tn_n adaptation	2-1567
5060 – Torque setpoint, control type switchover	2-1568
5210 – Speed controller without encoder	2-1569
5300 – V/f control for diagnostics	2-1570
5301 – Variable signaling function	2-1571
5490 – Speed control configuration	2-1572
5610 – Torque limitation/reduction/interpolator	2-1573
5620 – Motor/generator torque limit	2-1574
5630 – Upper/lower torque limit	2-1575
5640 – Mode switchover, power/current limitation	2-1576
5650 – Vdc_max controller and Vdc_min controller	2-1577
5710 – Current setpoint filter	2-1578
5714 – Iq and Id controller	2-1579
5722 – Field current / flux specification, flux reduction, flux controller	2-1580
5730 – Interface to the Motor Module (gating signals, actual current values)	2-1581

2.18 Vector control	2-1582
6030 – Speed setpoint, droop	2-1584
6031 – Pre-control balancing for reference/acceleration model	2-1585
6040 – Speed controller with/without encoder	2-1586
6050 – Kp_n-/Tn_n adaptation	2-1587
6060 – Torque setpoint	2-1588
6220 – Vdc_max controller and Vdc_min controller	2-1589
6300 – V/f characteristic and voltage boost	2-1590
6310 – Resonance damping and slip compensation	2-1591
6320 – Vdc_max controller and Vdc_min controller	2-1592
6490 – Speed control configuration	2-1593
6491 – Flux control configuration	2-1594
6495 – Excitation (FEM, p0300 = 5)	2-1595
6630 – Upper/lower torque limit	2-1596
6640 – Current/power/torque limits	2-1597
6710 – Current setpoint filter	2-1598
6714 – Iq and Id controller	2-1599
6721 – Id setpoint (PEM, p0300 = 2)	2-1600
6722 – Field weakening characteristic, Id setpoint (ASM, p0300 = 1)	2-1601
6723 – Field weakening controller, flux controller (ASM, p0300 = 1)	2-1602
6724 – Field weakening controller (PEM, p0300 = 2)	2-1603
6725 – Flux setpoint, field weakening controller (FEM, p0300 = 5)	2-1604
6726 – Field weakening controller, flux controller (FEM, p0300 = 5)	2-1605
6727 – Current model, excitation current monitoring, control cos phi (FEM, p0300 = 5)	2-1606
6730 – Interface to Motor Module (ASM, p0300 = 1)	2-1607
6731 – Interface to the Motor Module (PEM, p0300 = 2)	2-1608
6732 – Interface to Motor Module (FEM, p0300 = 5)	2-1609
6733 – Motor model selection (FEM, p0300 = 5)	2-1610
6799 – Display signals	2-1611
2.19 Technology functions	2-1612
7008 – kT estimator	2-1613
7010 – Friction characteristic	2-1614
7012 – Advanced Positioning Control (APC, r0108.7 = 1)	2-1615
7014 – External armature short-circuit (EASC, p0300 = 2xx or 4xx)	2-1616
7016 – Internal armature short-circuit (IASC, p0300 = 2xx or 4xx)	2-1617

7017 – DC brake (p0300 = 1xx)	2-1618
7020 – Synchronization	2-1619
2.20 Technology controller	2-1620
7950 – Fixed values, binary selection (r0108.16 = 1)	2-1621
7951 – Fixed values, direct selection (r0108.16 = 1 and p2216[D] = 1)	2-1622
7954 – Motorized potentiometer (r0108.16 = 1)	2-1623
7958 – Closed-loop control (r0108.16 = 1)	2-1624
7960 – DC-link voltage controller (r0108.16 = 1)	2-1625
2.21 Signals and monitoring functions	2-1626
8010 – Speed messages 1	2-1627
8011 – Speed messages 2	2-1628
8012 – Torque messages, motor locked/stalled	2-1629
8013 – Load monitoring (r0108.17 = 1)	2-1630
8014 – Thermal monitoring, power unit	2-1631
8016 – Thermal monitoring, motor	2-1632
8017 – Thermal I2t motor model (PEM, p0300 = 2xx)	2-1633
8018 – Separately excited synchronous motor (FEM, p0300 = 5)	2-1634
2.22 Diagnostics	2-1635
8060 – Fault buffer	2-1636
8065 – Alarm buffer	2-1637
8070 – Fault/alarm trigger word (r2129)	2-1638
8075 – Fault/alarm configuration	2-1639
8134 – Measuring sockets	2-1640
2.23 Data sets	2-1641
8560 – Command data sets (CDS)	2-1642
8565 – Drive data sets (DDS)	2-1643
8570 – Encoder data sets (EDS)	2-1644
8575 – Motor data sets (MDS)	2-1645
8580 – Power unit data sets (PDS)	2-1646
2.24 Basic Infeed	2-1647
8720 – Control word, sequence control, infeed	2-1648
8726 – Status word, sequence control, infeed	2-1649
8732 – Sequencer	2-1650

8734 – Missing enable signals, line contactor control	2-1651
8750 – Interface to the basic infeed power unit (control signals, actual values)	2-1652
8760 – Signals and monitoring functions (p3400.0 = 0)	2-1653
2.25 Smart Infeed	2-1654
8820 – Control word, sequence control, infeed	2-1655
8826 – Status word, sequence control, infeed	2-1656
8828 – Status word, infeed	2-1657
8832 – Sequencer	2-1658
8834 – Missing enable signals, line contactor control	2-1659
8850 – Interface for Smart Infeed (control signals, actual values)	2-1660
8860 – Signals and monitoring functions, line supply voltage monitoring	2-1661
8864 – Signals and monitoring functions, line frequency and Vdc monitoring	2-1662
2.26 Active Infeed	2-1663
8920 – Control word, sequence control, infeed	2-1664
8926 – Status word, sequence control, infeed	2-1665
8928 – Status word, infeed	2-1666
8932 – Sequencer	2-1667
8934 – Missing enable signals, line contactor control	2-1668
8940 – Modulation depth reserve controller / DC link voltage controller (p3400.0 = 0)	2-1669
8946 – Current pre-control / current controller / gating unit (p3400.0 = 0)	2-1670
8948 – Master/slave (r0108.19 = 1)	2-1671
8950 – Interface for Active Infeed, control signals, actual values (p3400.0 = 0)	2-1672
8960 – Signals and monitoring functions, line supply voltage monitoring (p3400.0 = 0)	2-1673
8964 – Signals and monitoring functions, line frequency/Vdc monitoring (p3400.0 = 0)	2-1674
2.27 Terminal Board 30 (TB30)	2-1675
9100 – Digital inputs, isolated (DI 0 to DI 3)	2-1676
9102 – Digital outputs, isolated (DO 0 to DO 3)	2-1677
9104 – Analog inputs (AI 0 to AI 1)	2-1678
9106 – Analog outputs (AO 0 to AO 1)	2-1679
2.28 Communication Board CAN10 (CBC10)	2-1680
9204 – Incoming telegram, free PDO mapping (p8744 = 2)	2-1681
9206 – Incoming telegram, predefined connection set (p8744 = 1)	2-1682
9208 – Outgoing telegram, free PDO mapping (p8744 = 2)	2-1683

9210 – Outgoing telegram, predefined connection set (p8744 = 1)	2-1684
9220 – Control word CANopen	2-1685
9226 – Status word, CANopen	2-1686
2.29 Terminal Module 15 for SINAMICS (TM15DI/DO)	2-1687
9400 – Digital inputs/outputs, bidirectional (DI/DO 0 to DI/DO 7)	2-1688
9401 – Digital inputs/outputs, bidirectional (DI/DO 8 to DI/DO 15)	2-1689
9402 – Digital inputs/outputs, bidirectional (DI/DO 16 to DI/DO 23)	2-1690

Explanations for the function diagrams - Explanation of the symbols (Part 1)						27.10.08 V04.03.01		SINAMICS																																															

Fig. 2-1

1020 – Explanations of the symbols (Part 1)

---	--	--	--	--

Fig. 2-2 1021 – Explanations of the symbols (Part 2)

1022 – Explanations of the symbols (Part 3)

Switch-on delay

The digital signal x must have the value "1" without any interruption during the time T before output y changes to "1".

Switch-off delay

The digital signal x must have the value "0" without interruption during the time T before output y changes to "0".

Delay (switch-on and switch-off)

The digital signal x must have the value "1" without interruption during time T_1 or must have the value "0" during time T_2 before output y changes its signal state.

PT1 element

Delay element, first order.

ρ_{xxx} = time constant

2nd-order filter (bandstop/general filter)

Used as bandstop filter - center frequency f_s :

- bandwidth f_B :

$$\begin{aligned} f_{n_z} &= f_s \\ f_{n_n} &= f_s \\ D_{z} &= 0 \\ D_{n} &= \frac{f_B}{2 \cdot f_s} \end{aligned}$$

Transfer function when used as general filter

$$H(s) = \frac{\left(\frac{s}{2\pi f_{n_z}}\right)^2 + \frac{2 \cdot D_z}{2\pi f_{n_z}} \cdot s + 1}{\left(\frac{s}{2\pi f_{n_n}}\right)^2 + \frac{2 \cdot D_n}{2\pi f_{n_n}} \cdot s + 1}$$

Analog adder can be activated

The following applies to $l = 1$ signal: $y = x_1 + x_2$

The following applies to $l = 0$ signal: $y = x_1$

PT2 low pass

S Natural frequency, denominator
 f_n Damping, denominator

Transfer function

$$H(s) = \frac{1}{\left(\frac{s}{2\pi f_{n_n}}\right)^2 + \frac{2 \cdot D_{-n}}{2\pi f_{n_n}} \cdot s + 1}$$

Handling BICO technology

Binector:

Binectors are binary signals that can be freely interconnected (BO = Binector Output). They represent a bit of a "BO:" display parameter (e.g. bit 15 from r0723).

Connector:

Connectors are "analog signals" that can be freely interconnected (e.g. percentage variables, speeds or torques). Connectors are also "CO:" display parameters (CO = Connector Output).

Parameterization:

At the signal destination, the required binector or connector is selected using appropriate parameters:

"BI:" parameter for binectors (BI = Binector Input)

or

"CI:" parameter for connectors (CI = Connector Input)

Example:

The main setpoint for the speed controller (CI: p1070) should be received from the output of the motorized potentiometer (CO: r1050) and the "jog" command (BI: p1055) from digital input DI 0 (BO: r0722.0, X122.1 terminal) on the CU320.

Parameterizing steps:

- ① p1055[0] = 722.0 Terminal X122.1 acts as "Jog bit 0".
- ② p1070[0] = 1050 The output of the motorized potentiometer acts as main setpoint for the speed controller.

2.5 CU_LINK

Function diagrams

2211 – Data transfer

2-1422

<1> The drive object CU_LINK only exists for automation systems with integrated SINAMICS functionality (e.g. SINUMERIK NCU) and the corresponding expansion components (e.g. CX32, NX10).
The master functionality is available on the automation system, the slave functionality is available on the expansion components.
<2> p8800: CU_LINK address.
Address of the CX32 resp. NX10/15, representing the DO CU_LINK.
The address correlates with the DRIVE-CLiQ port of the CU connected to the CX/NX configured.
Value range: See p0918 (PROFIBUS address)
Only available within the unit, not visible in the STARTER, can be read, for example, through acyclic communication with DPV1 services.

<1> Depending on the drive object, only specific telegrams can be used.

<2> If p0922 = 999 is changed to another value, the telegram is automatically assigned as specified in [2420] - [2423].

If p0922 ≠ 999 is changed to p0922 = 999, the "old" telegram assignment is maintained as specified in [2420] - [2423]!

<3> Can be freely connected.

<4> The maximum number of PZD words depends on the drive object type.

 = Position encoder signal

<5> Only for SINAMICS S120/S150.

2.10 Brake control

Function diagrams

2701 – Basic brake control (r0108.14 = 0)	2-1498
2704 – Extended brake control, stationary state detection (r0108.14 = 1)	2-1499
2707 – Extended brake control, open/close brake (r0108.14 = 1)	2-1500
2711 – Extended brake control, signal outputs (r0108.14 = 1)	2-1501

- <1> Motor holding brake configuration (p1215)
0 = No motor holding brake being used.
1 = Motor holding brake acc. to sequence control.
2 = Motor holding brake always released.
3 = Motor holding brake like sequence control, connection via BICO.
- <2> Priority assignment (high -> low): p1215, p0858, p0855, p0856, sequence control.
- <3> If p1215 = 0, 2 -> t = 0 ms. <10>
- <4> Only if Safety Integrated is active (Double Motor Module: X22, Chassis: X41).
- <5> For p1227 = 300 s, the monitoring function is deactivated.
- <6> If an external motor holding brake is used, p1215 should be set to 3 and r0899.12 should be interconnected as control signal.
- <7> r0046.21 = 0, as long as r0046.0 = 1 (OFF1 enable missing or power-on inhibit).
r0046.21 = 1, if p0858 = 1 or p0856 = 0.
The signal generation is shown simplified.
- <8> The internal signal includes signals that lead to OFF1 or OFF3 (e. g. BICO or fault response).
- <9> If the brake is permanently applied or released (p0855, p0858 or p1215), the drive does not wait while the brake is released or applied.
- <10> Only for SINAMICS S120.

Note: Braking signal diagnostic evaluation (p1278) only applies for SBC (Safe Brake Control) (controls the Safe Brake Relay). <10>

Background
Refer to [1020.7]

Changing the fault response for maximum 20 faults <1>

Changing the message type - fault <==> alarm for maximum 20 faults/alarms <1>

Changing the acknowledge mode for maximum 20 faults <1>

<1> The fault response, acknowledge mode and message type for all faults and alarms are set to meaningful default values in the factory setting. Changes that may be required are only possible in specific value ranges specified by SIEMENS. When the message type is changed, the supplementary information is transferred from fault value r0949 to alarm value r2124 and vice versa.

- <1> This controller increases (boosts) the DC link voltage when the modulation depth limit has been reached (p3480).
 <2> When the pulses are enabled, the DC link voltage is ramped (p3566) from the actual value to the setpoint p3510.
 <3> Applies only if the " Master/slave" function module is activated (r0108.19 = 1).

3.1 Overview of faults and alarms

3.1.1 General information on faults and alarms

Displaying faults and alarms

If a fault occurs, the drive indicates by issuing corresponding fault(s) and/or alarm(s).

The following methods for displaying faults and alarms are available:

- Display via the fault and alarm buffer with PROFIBUS
- Display online via the commissioning software

Differences between faults and alarms

The differences between faults and alarms are as follows:

Table 3-1 Differences between faults and alarms

Type	Description
Faults	What happens when a fault occurs? • The appropriate fault reaction is triggered. • Status signal ZSW1.3 is set. • The fault is entered in the fault buffer. How are faults eliminated? • Remove the original cause of the fault. • Acknowledge the fault.
Alarms	What happens when an alarm occurs? • Status signal ZSW1.7 is set. • The alarm is entered in the alarm buffer. How are alarms eliminated? • Alarms acknowledge themselves. If the cause of the alarm is no longer present, they automatically reset themselves.

Fault reactions

The following fault reactions are defined:

Table 3-2 Fault reactions

List	PROFId- rive	Reaction	Description
NONE	-	None	No reaction when a fault occurs. Note: When the "Basic positioner" function module is activated (r0108.4 = 1), the following applies: When a fault occurs with fault reaction "NONE", an active traversing task is interrupted and the system switches to tracking mode until the fault has been rectified and acknowledged.
OFF1	ON/ OFF	Brake in the ramp-function generator ramp-down followed by pulse disable	Closed-loop speed control (p1300 = 20, 21) • $n_{set} = 0$ is input immediately to brake the drive along the ramp-function generator ramp-down (p1121). • When zero speed is detected, the motor holding brake (if parameters have been assigned for it) is closed (p1215). The pulses are suppressed when the brake closing time (p1217) expires. Zero speed is detected if the actual speed drops below the threshold (p1226) or if the monitoring time (p1227) started when the speed setpoint $\leq$ speed threshold (p1226) has expired. Closed-loop torque control (p1300 = 23) • The following applies to closed-loop torque control mode: Reaction as for OFF2. • When the system switches to closed-loop control with p1501, the following applies: No separate braking reaction. If the actual speed value drops below the speed threshold (p1226) or the timer stage (p1227) has expired, the motor holding brake (if one is being used) is closed. The pulses are suppressed when the brake closing time (p1217) expires.
OFF2	COAST STOP	Internal/external pulse disable	Closed-loop speed and torque control • Instantaneous pulse suppression, the drive "coasts" to a standstill. • The motor holding brake (if one is being used) is closed immediately. • The closing lockout is activated.

Table 3-2 Fault reactions, continued

List	PROFId- rive	Reaction	Description
OFF3	QUICK STOP	Brake along the OFF3 ramp-down followed by pulse disable	Closed-loop speed control (p1300 = 20, 21) • $n_set = 0$ is input immediately to brake the drive along the OFF3 ramp-down (p1135). • When zero speed is detected, the motor holding brake (if parameters have been assigned for it) is closed. The pulses are suppressed when the brake application time (p1217) expires. Zero speed is detected if the actual speed drops below the threshold (p1226) or if the monitoring time (p1227) started when the speed setpoint $\leq$ speed threshold (p1226) has expired. • The closing lockout is activated. Closed-loop torque control (p1300 = 23) • Switchover to speed-controlled operation and other reactions as described for speed-controlled operation.
STOP1	-	-	Under development
STOP2	-	$n_set = 0$	• $n_set = 0$ is input immediately to brake the drive along the OFF3 ramp-down (p1135). • The drive remains in closed-loop speed control mode.
IASC/ DCBRAKE	-	-	• For synchronous motors, the following applies: If a fault occurs with this fault reaction, an internal armature short-circuit is triggered. The conditions for $p1231 = 4$ must be observed. • For induction motors, the following applies: If a fault occurs with this fault reaction, DC braking is triggered. The DC brake must have been put into operation (p1232, p1233, p1234).
ENCODER	-	Internal/external pulse disable (p0491)	The fault reaction ENCODER is applied as a function of the setting in p0491. Factory setting: $p0491 = 0 \rightarrow$ Encoder fault causes OFF2 Notice: When changing p0491, it is imperative that the information in the description of this parameter is carefully observed.

Acknowledging faults

The list of faults and alarms specifies how to acknowledge each fault after the cause has been remedied.

Table 3-3 Acknowledging faults

Acknowledg- ment	Description								
POWER ON	The fault is acknowledged by a POWER ON process (switch drive unit off and on again). Note: If this action has not eliminated the fault cause, the fault is displayed again immediately after power up.								
IMMEDIATE	Faults can be acknowledged on one drive object (Points 1 to 3) or on all drive objects (point 4) as follows: 1 Acknowledge by setting parameter: p3981 = 0 --> 1 2 Acknowledge via binector inputs: <table border="0"> <tr> <td>p2103</td> <td>BI: 1. Acknowledge faults</td> </tr> <tr> <td>p2104</td> <td>BI: 2. Acknowledge faults</td> </tr> <tr> <td>p2105</td> <td>BI: 3. Acknowledge faults</td> </tr> </table> 3 Acknowledge using PROFIBUS control signal: STW1.7 = 0 --> 1 (edge) 4 Acknowledge all faults <table border="0"> <tr> <td>p2102</td> <td>BI: Acknowledge all faults</td> </tr> </table> All of the faults on all of the drive objects of the drive system can be acknowledged using this binector input. Note: • These faults can also be acknowledged by a POWER ON operation. • If this action has not eliminated the fault cause, the fault will continue to be displayed after acknowledgment. • Safety Integrated faults The "Safe standstill" (SH) function must be deselected before these faults are acknowledged.	p2103	BI: 1. Acknowledge faults	p2104	BI: 2. Acknowledge faults	p2105	BI: 3. Acknowledge faults	p2102	BI: Acknowledge all faults
p2103	BI: 1. Acknowledge faults								
p2104	BI: 2. Acknowledge faults								
p2105	BI: 3. Acknowledge faults								
p2102	BI: Acknowledge all faults								
PULSE INHIBIT	The fault can only be acknowledged with a pulse inhibit (r0899.11 = 0). The same options are available for acknowledging as described under acknowledgment with IMMEDIATE.								

Saving the fault buffer when switching power off

The contents of the fault buffer are saved to a non-volatile storage medium when the Control Unit 320 (CU320) is switched off (i.e. the fault buffer history is still available when the unit is switched on again).

Note:

Requirements:

- Firmware version 2.2 or higher.
- Control Unit 320 (CU320) with hardware version C or higher.
The hardware version is shown on the rating plate or can be displayed online with the commissioning software (in Project Navigator under "Drive Unit" --> Configuration --> Version Overview).

If these prerequisites are not met, the contents of the fault buffer are deleted at every POWER ON operation.

The fault buffer of a drive object comprises the following parameters:

- r0945[0 to 63], r0947[0 to 63], r0948[0 to 63], r0949[0 to 63]
- r2109[0 to 63], r2130[0 to 63], r2133[0 to 63], r2136[0 to 63]

The fault buffer contents can be deleted manually as follows:

- Delete fault buffer for all drive objects:
p2147 = 1 --> p2147 = 0 is automatically set after execution.
- Delete fault buffer for a specific drive object:
p0952 = 0 --> The parameter belongs to the specified drive object.

The fault buffer contents are automatically deleted when the following occurs:

- Restore factory setting (p0009 = 30 and p0976 = 1).
- Download with modified structure (e.g. number of drive objects changed)
- Power-up after other parameter values have been loaded (e.g. p0976 = 10)
- Upgrade firmware to later version.

3.1.2 Explanation of the list of faults and alarms

The data in the following example has been chosen at random. The information listed below is the maximum amount of information that a description can contain. Some of the information is optional.

The list of faults and alarms (See Chapter 3.2) is structured as follows:

----- **Start of example** -----

Axxxxx (F, N)	Fault location (optional): Name
Message value:	Component number: %1, cause: %2
Drive object:	List of objects.
Reaction:	NONE
Acknowledgment:	NONE
Cause:	Description of possible causes Fault value (r0949, interpret format): or alarm value (r2124, interpret format): (optional) Information about fault or alarm values (optional)
Remedy:	Description of possible remedies
Reaction to F:	A_INFEED: OFF2 (OFF1, NONE) SERVO: NONE (OFF1, OFF2, OFF3) VECTOR: NONE (OFF1, OFF2, OFF3)
Acknowledgment for F:	IMMEDIATELY (POWER ON)
Reaction to N:	NONE
Acknowledgment:	

Axxxxx	Alarm xxxxx
Axxxxx (F, N)	Alarm xxxxx (message type can be changed to F or N)
Fxxxxx	Fault xxxxx
Fxxxxx (A, N)	Fault xxxxx (report type can be changed to F or N)
Nxxxxx	No message
Nxxxxx (A)	No message (message type can be changed to A)
Cxxxxx	Safety message (separate message buffer)

A message comprises a letter followed by the relevant number.

The meaning of the letters is as follows:

- A means "Alarm".
- F means "Fault".
- N means "No message" or "Internal message".
- C means "Safety message"

The optional parentheses indicate whether the type specified for this message can be changed and which message types can be adjusted via parameters (p2118, p2119).

Information on reaction and acknowledgment is specified independently for a message with an adjustable message type (e.g. reaction to F, acknowledgment for F).

Note:

You can change the default properties of a fault or alarm via parameter assignment.

References: /IH1/ SINAMICS S120 Commissioning Manual
Section "Diagnostics"

The list of faults and alarms (see Chapter 3.2) provides information in relation to the properties of a message that have been set as standard. If the properties of a specific message are changed, the corresponding information may have to be modified in this list.

Fault location (optional): Name

The fault location (optional), the name of the fault or alarm, and the message number are all used to identify the message (e.g. with the commissioning software).

Message value:

The information provided under the message value tells you about the composition of the fault/alarm value.

Example:

Message value: Component number: %1, cause: %2

This fault value or alarm value contains information about the component number and cause. The entries %1 and %2 are placeholders, which are filled appropriately in online operation with the commissioning software.

Drive object:

Each message (fault/alarm) specifies the drive object in which it can be found.

A message can belong to either one, several, or all drive objects.

Reaction: Default fault reaction (adjustable fault reaction)

Specifies the default reaction in the event of a fault.

The optional parentheses indicate whether the default fault reactions can be changed and which fault reactions can be adjusted via parameters (p2100, p2101).

Note:

See Chapter 3.1.1

Acknowledgment: Default acknowledgment (adjustable acknowledgment)

Specifies the default method of acknowledging faults after the cause has been eliminated.

The optional parentheses indicate whether the default acknowledgment can be changed and which acknowledgment can be adjusted via parameters (p2126, p2127).

Note:

See Chapter 3.1.1

Cause:

Description of the possible causes of the fault/alarm. A fault or alarm value can also be specified (optional).

Fault value (r0949, format):

The fault value is entered in the fault buffer in r0949[0 to 63] and specifies additional, more precise information about a fault.

Alarm value (r2124, format):

The alarm value specifies additional, more precise information about an alarm.

The alarm value is entered in the alarm buffer in r2124[0 to 7] and specifies additional, more precise information about an alarm.

Remedy:

Description of the methods available for eliminating the cause of the active fault or alarm

Alarm

In certain cases, servicing and maintenance personnel are responsible for choosing a suitable method to eliminate the cause of faults.

3.1.3 Number ranges of faults and alarms

Note:

The following number ranges represent an overview for all faults and alarms in SINAMICS.

The faults and alarms for the product described in this Parameter Manual are described in detail in Chapter 3.2.

Faults and alarms are organized into the following number ranges:

Table 3-4 Number ranges of faults and alarms

From	To	Range
1000	3999	Control unit
4000	4999	Reserved
5000	5999	Power unit
6000	6899	Infeed
6900	6999	Braking Module
7000	7999	Drive
8000	8999	Option Board
9000	12999	Reserved
13000	13001	Licensing
13002	19999	Reserved
20000	29999	OEM
30000	30999	DRIVE-CLiQ component power unit
31000	31999	DRIVE-CLiQ component encoder 1
32000	32999	DRIVE-CLiQ component encoder 2 Note: Faults that occur are automatically output as an alarm if the encoder is set up as a direct measuring system and does not intervene in the motor control.
33000	33999	DRIVE-CLiQ component encoder 3 Note: Faults that occur are automatically output as an alarm if the encoder is set up as a direct measuring system and does not intervene in the motor control.
34000	34999	Voltage Sensing Module (VSM)
35000	35199	Terminal Module 54F (TM54F)
35200	35999	Terminal Module 31 (TM31)
36000	36999	DRIVE-CLiQ Hub Module

Table 3-4 Number ranges of faults and alarms, continued

From	To	Range
40000	40999	Controller Extension 32 (CX32)
41000	48999	Reserved
49000	49999	SINAMICS GM/SM/GL
50000	50499	Communication Board (COMM BOARD)
50500	59999	OEM Siemens
60000	65535	SINAMICS DC MASTER (DC closed loop control)

3.2 List of faults and alarms

Product: SINAMICS S120/S150, Version: 4301400, Language: eng,
Objects: A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30,
TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR

F01000	Internal software error
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	An internal software error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline. - replace the Control Unit.
F01001	Floating point exception
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	A floating point exception has occurred. The error can be caused by the basic system, DCC, FBLOCKS or OA_applications. Additional debug information can be found in p9999: Index 0: Alarm number Index 1: Program counter at the time the exception occurred Index 2: Cause of floating point exception: To be treated as a hexadecimal: 0x1 - Invalid operation 0x2 - Divide by zero 0x4 - Overflow 0x8 - Underflow 0x10 - Inexact result
Remedy:	- carry out a POWER ON (power off/on) for all components. - check configuration and signals of the free function blocks. - check configuration and signals of the DCC charts. - upgrade firmware to later version. - contact the Hotline.
F01002	Internal software error
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	An internal software error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.

F01003 Acknowledgement delay when accessing the memory

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A memory area was accessed that does not return a "READY".
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on) for all components.
- contact the Hotline.

N01004 (F, A) Internal software error

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: An internal software error has occurred.
Fault value (r0949, hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: - read out diagnostics parameter (r9999).
- contact the Hotline.
See also: r9999 (Software error internal supplementary diagnostics)
Reaction upon F: OFF2
Acknowl. upon F: POWER ON
Reaction upon A: NONE
Acknowl. upon A: NONE

F01005 Firmware download for DRIVE-CLiQ component unsuccessful

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: It was not possible to download the firmware to a DRIVE-CLiQ component.
Fault value (r0949, interpret hexadecimal):
yyxxxx hex: yy = component number, xxxx = fault cause
xxxx = 000B hex = 11 dec:
DRIVE-CLiQ component has detected a checksum error.
xxxx = 000F hex = 15 dec:
The selected DRIVE-CLiQ component did not accept the contents of the firmware file.
xxxx = 0012 hex = 18 dec:
Firmware version is too old and is not accepted by the component.
xxxx = 0013 hex = 19 dec:
Firmware version is not suitable for the hardware release of the component.
xxxx = 0065 hex = 101 dec:
After several communication attempts, no response from the DRIVE-CLiQ component.
xxxx = 008B hex = 139 dec:
Initially, a new boot loader is loaded (must be repeated after POWER ON).
xxxx = 008C hex = 140 dec:
Firmware file for the DRIVE-CLiQ component not available on the memory card.
xxxx = 008D hex = 141 dec:
An inconsistent length of the firmware file was signaled. The firmware download may have been caused by a loss of connection to the firmware file. This can occur during a project download/reset in the case of a SINAMICS Integrated Control Unit, for example.
xxxx = 008F hex = 143 dec:
Component has not changed to the mode for firmware download. It was not possible to delete the existing firmware.

xxxx = 0090 hex = 144 dec:

When checking the firmware that was downloaded (checksum), the component detected a fault. It is possible that the file on the memory card is defective.

xxxx = 0091 hex = 145 dec:

Checking the loaded firmware (checksum) was not completed by the component in the appropriate time.

xxxx = 009C hex = 156 dec:

Component with the specified component number is not available (p7828).

xxxx = Additional values:

Only for internal Siemens troubleshooting.

Remedy:

- check the selected component number (p7828).
 - check the DRIVE-CLiQ connection.
 - save suitable firmware file for download in the directory "/siemens/sinamics/code/sac/".
 - use a component with a suitable hardware version
 - after POWER ON has been carried out again for the DRIVE-CLiQ component, download the firmware again.
- Depending on p7826, the firmware will be automatically downloaded.

A01006 Firmware update for DRIVE-CLiQ component required

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The firmware of a DRIVE-CLiQ component must be updated as there is no suitable firmware or firmware version in the component for operation with the Control Unit.
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component.

Remedy:

Firmware update using the commissioning software:
The firmware version of all of the components on the "Version overview" page can be read in the Project Navigator under "Configuration" of the associated drive unit and an appropriate firmware update can be carried out.
Firmware update via parameter:
- take the component number from the alarm value and enter into p7828.
- start the firmware download with p7829 = 1.

A01007 POWER ON for DRIVE-CLiQ component required

Message value: Component number: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: A DRIVE-CLiQ component must be powered up again (POWER ON) as, for example, the firmware was updated.
Alarm value (r2124, interpret decimal):
Component number of the DRIVE-CLiQ component.
Note:

For a component number = 1, a POWER ON of the Control Unit is required.

Remedy:

Switch off the power supply of the specified DRIVE-CLiQ component and switch it on again.

A01009 (N) CU: Control module overtemperature

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The temperature (r0037[0]) of the control module (Control Unit) has exceeded the specified limit value.

Remedy:

- check the air intake for the Control Unit.
 - check the fan for the Control Unit (only for CU310).
- Note:
The alarm automatically disappears after the limit value has been undershot.

Reaction upon N: NONE

Acknowled. upon N: NONE

F01010 Drive type unknown

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: An unknown drive type was found.
Fault value (r0949, interpret decimal):
Drive object number (refer to p0101, p0107).
Remedy:
- Replace Power Module.
- carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

F01011 (N) Download interrupted

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The project download was interrupted.
- the project download was prematurely ended by the user or by the commissioning software (e.g. STARTER, SCOUT).
- the communication cable was interrupted (e.g. cable breakage, cable withdrawn).
Note:
The response to an interrupted download is the state "first commissioning".
Remedy:
- check the communication cable.
- download the project again.
- boot from previously saved files (power-down/power-up or p0976).

Reaction upon N: NONE
Acknowl. upon N: NONE

F01012 (N) Project conversion error

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: When converting the project of an older firmware version, an error occurred.
Fault value (r0949, interpret decimal):
Parameter number of the parameter causing the error.
For fault value = 600, the following applies:
The temperature evaluation is no longer assigned to the power unit but to the encoder evaluation.
Notice:
Monitoring of the motor temperature is no longer ensured.
Remedy: Check the parameter indicated in the fault value and correctly adjust it accordingly.
Re fault value = 600:
Parameter p0600 must be set to the values 1, 2 or 3 in accordance with the assignment of the internal encoder evaluation to the encoder interface.
Value 1 means: The internal encoder evaluation is assigned to the encoder interface 1 via p0187.
Value 2 means: The internal encoder evaluation is assigned to the encoder interface 2 via p0188.
Value 3 means: The internal encoder evaluation is assigned to the encoder interface 3 via p0189.
- If necessary, the internal encoder evaluation must be assigned to an encoder interface via parameters p0187, p0188 or p0189 accordingly.
- If necessary, upgrade the firmware to a later version.

Reaction upon N: NONE
Acknowl. upon N: NONE

F01015	Internal software error
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	An internal software error has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
A01016 (F)	Firmware changed
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	At least one firmware file in the directory /SIEMENS/SINAMICS/ has been changed without authorization with respect to the version shipped from the factory. No changes are permitted in this directory. Alarm value (r2124, interpret decimal): 0: Checksum of one file is incorrect. 1: File missing. 2: Too many files. 3: Incorrect firmware version. 4: Incorrect checksum of the back-up file. See also: r9925 (Firmware file incorrect)
Remedy:	For the non-volatile memory for the firmware (memory card/device memory), restore the delivery condition. Note: The file involved can be read out using parameter r9925. See also: r9926 (Firmware check status)
Reaction upon F:	OFF2
Acknowl. upon F:	POWER ON
A01017	Component lists changed
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	On the memory card, one file in the directory /SIEMENS/SINAMICS/DATA or /ADDON/SINAMICS/DATA has been illegally changed with respect to that supplied from the factory. No changes are permitted in this directory. Alarm value (r2124, interpret decimal): The problem is indicated in the first digit of the alarm value: 1. File does not exist. 2. Firmware version of the file does not match the software version. 3. The file checksum is incorrect. The second digit of the alarm value indicates in which directory the file is located: 0: Directory /SIEMENS/SINAMICS/DATA/ 1. Directory /ADDON/SINAMICS/DATA/ The third digit of the alarm value indicates the file: 0: File MOTARM.ACX 1: File MOTSRM.ACX 2: File MOTSLM.ACX 3: File ENCDATA.ACX 4: File FILTDATA.ACX 5: File BRKDATA.ACX 6: File DAT_BEAR.ACX 7: File CFG_BEAR.ACX 8: File ENC_GEAR.ACX
Remedy:	For the memory card file involved, restore the status originally supplied from the factory.

F01023	Software timeout (internal)
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	An internal software timeout has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.

F01030	Sign-of-life failure for master control
Message value:	-
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2) Vector: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	For active PC master control, no sign-of-life was received within the monitoring time. The master control was returned to the active BICO interconnection.
Remedy:	Set the monitoring time higher at the PC or, if required, completely disable the monitoring function. For the commissioning software, the monitoring time is set as follows: <Drive> -> Commissioning -> Control panel -> Button "Fetch master control" -> A window is displayed to set the monitoring time in milliseconds. Notice: The monitoring time should be set as short as possible. A long monitoring time means a late response when the communication fails!

F01031	Sign-of-life failure for OFF in REMOTE
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2) Vector: OFF3 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF2, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	With the "OFF in REMOTE" mode active, no sign-of-life was received within 3 seconds.
Remedy:	- Check the data cable connection at the serial interface for the Control Unit (CU) and operator panel. - Check the data cable between the Control Unit and operator panel.

F01033	Units changeover: Reference parameter value invalid
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	When changing over the units to the referred representation type, it is not permissible for any of the required reference parameters to be equal to 0.0 Fault value (r0949, parameter): Reference parameter whose value is 0.0. See also: p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Selecting technological units)
Remedy:	Set the value of the reference parameter to a number different than 0.0. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004

F01034	Units changeover: Calculation parameter values after reference value change unsuccessful
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The change of a reference parameter meant that for an involved parameter the selected value was not able to be recalculated in the per unit representation. The change was rejected and the original parameter value restored. Fault value (r0949, parameter): Parameter whose value was not able to be recalculated. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
Remedy:	Select the value of the reference parameter such that the parameter involved can be calculated in the per unit representation. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
A01035 (F)	ACX: Boot from the back-up parameter back-up files
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	When the Control Unit is booted, no complete data set was found from the parameter back-up files. The last time that the parameterization was saved, it was not completely carried out. Instead, a back-up data set or a back-up parameter back-up file is downloaded. Alarm value (r2124, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	If you have saved the project using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the non-volatile memory.
Reaction upon F:	Infeed: NONE (OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY
F01036 (A)	ACX: Parameter back-up file missing
Message value:	%1
Drive object:	All objects
Reaction:	Infeed: NONE (OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	When downloading the device parameterization, a parameter back-up file associated with a drive object cannot be found. Neither a PSxxxxyy.ACX, a PSxxxxyy.NEW nor a PSxxxxyy.BAK parameter back-up file exists in the non-volatile memory for this drive object. Fault value (r0949, interpret hexadecimal): Byte 1: yyy in the file name PSxxxxyy.ACX yyy = 000 --> consistency back-up file yyy = 001 ... 062 --> drive object number yyy = 099 --> PROFIBUS parameter back-up file Byte 2, 3, 4: Only for internal Siemens troubleshooting.
Remedy:	If you have saved the project data using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the non-volatile memory. If you have not saved the project data, then first commissioning of the system has to be carried out again.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F01037 (A)	ACX: Re-naming the parameter back-up file unsuccessful
Message value:	%1
Drive object:	All objects
Reaction:	Infeed: NONE (OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	Re-naming after saving a parameter back-up file in the non-volatile memory was unsuccessful. One of the parameter back-up files to be re-named had the "read only" attribute. The parameter back-up files are saved in the directory \USER\SINAMICS\DATA. It is possible that the non-volatile memory is defective. Fault value (r0949, interpret hexadecimal): Byte 1: yyy in the file names PSxxxxyy.* or Cxxxxyy.* or CCxxxxyy.* yyy = 000 --> consistency back-up file yyy = 099 --> PROFIBUS parameter back-up file PSxxx099.* Byte 2: xxx in the file name PSxxxxyy.* xxx = 000 --> data save started with p0977 = 1 xxx = 010 --> data save started with p0977 = 10 xxx = 011 --> data save started with p0977 = 11 xxx = 012 --> data save started with p0977 = 12 Byte 4, 3: Only for internal Siemens troubleshooting.
Remedy:	- check whether one of the files to be overwritten has the attribute "read only" and change this file attribute to "writable". Check all of the files (PSxxxxyy.*, CCxxxxyy.*, Cxxxxyy.*) that belong to drive yyy designated in the fault value. - replace the memory card or Control Unit.
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F01038 (A)	ACX: Loading the parameter back-up file unsuccessful
Message value:	%1
Drive object:	All objects
Reaction:	Infeed: NONE (OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	An error has occurred when downloading PSxxxxyy.ACX or PTxxxxyy.ACX files from the non-volatile memory. Fault value (r0949, interpret hexadecimal): Byte 1: yyy in the file name PSxxxxyy.ACX yyy = 000 --> consistency back-up file yyy = 001 ... 062 --> drive object number yyy = 099 --> PROFIBUS parameter back-up file Byte 4, 3, 2: Only for internal Siemens troubleshooting.
Remedy:	- If you have saved the project data using the commissioning software, carry out a new download for your project. Save using the function "Copy RAM to ROM" or with p0977 = 1 so that all of the parameter files are again completely written to the non-volatile memory. - replace the memory card or Control Unit.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F01039 (A)	ACX: Writing to the parameter back-up file was unsuccessful
Message value:	%1
Drive object:	All objects
Reaction:	Infeed: NONE (OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	Writing to at least one parameter back-up file PSxxxxxyy.*** in the non-volatile memory was unsuccessful. - In the directory /USER/SINAMICS/DATA/ at least one parameter back-up file PSxxxxxyy.*** has the "read only" file attribute and cannot be overwritten. - There is not sufficient free memory space available. - The non-volatile memory is defective and cannot be written to. Fault value (r0949, interpret hexadecimal): dcba hex a = yyy in the file names PSxxxxxyy.*** a = 000 --> consistency back-up file a = 001 ... 062 --> drive object number a = 070 --> FEPROM.BIN a = 080 --> DEL4BOOT.TXT a = 099 --> PROFIBUS parameter back-up file b = xxx in the file names PSxxxxxyy.*** b = 000 --> data save started with p0977 = 1 b = 010 --> data save started with p0977 = 10 b = 011 --> data save started with p0977 = 11 b = 012 --> data save started with p0977 = 12 d, c: Only for internal Siemens troubleshooting.
Remedy:	- check the file attribute of the files (PSxxxxxyy.***, CAxxxxxyy.***, CCxxxxxyy.***) and, if required, change from "read only" to "writeable". - check the free memory space in the non-volatile memory. Approx. 80 kbyte of free memory space is required for every drive object in the system. - replace the memory card or Control Unit.
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F01040	Save parameter settings and carry out a POWER ON
Message value:	-
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	A parameter was changed in the drive system which means that it is necessary to save the parameters and re-boot (e.g. p0110).
Remedy:	- save the parameters (p0971/p0977). - carry out a POWER ON (power off/on) for all components.
F01041	Parameter save necessary
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	Defective or missing files were detected on the memory card when booting. Fault value (r0949, interpret decimal): 1: Source file cannot be opened. 2: Source file cannot be read. 3: Target directory cannot be set up. 4: Target file cannot be set up/opened. 5: Target file cannot be written to. Additional values: Only for internal Siemens troubleshooting.

Remedy:

- save the parameters.
- download the project again to the drive unit.
- update the firmware
- if required, replace the Control Unit and/or memory card card.

F01042 Parameter error during project download

Message value: Parameter: %1, Index: %2, fault cause: %3

Drive object: All objects

Reaction: Infeed: OFF2 (NONE, OFF1)
Servo: OFF2 (NONE, OFF1, OFF3)
Vector: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: An error was detected when downloading a project using the commissioning software (e.g. incorrect parameter value).
For the specified parameter, it was detected that dynamic limits were exceeded that may possibly depend on other parameters.
Fault value (r0949, interpret hexadecimal):
ccbbaaaa hex
aaaa = Parameter
bb = Index
cc = fault cause
0: Parameter number illegal.
1: Parameter value cannot be changed.
2: Lower or upper value limit exceeded.
3: Sub-index incorrect.
4: No array, no sub-index.
5: Data type incorrect.
6: Setting not permitted (only resetting).
7: Descriptive element cannot be changed.
9: Descriptive data not available.
11: No master control.
15: No text array available.
17: Task cannot be executed due to operating state.
20: Illegal value.
21: Response too long.
22: Parameter address illegal.
23: Format illegal.
24: Number of values not consistent.
25: Drive object does not exist.
101: Presently deactivated.
104: Illegal value.
107: Write access not permitted when controller enabled.
108: Unit unknown.
109: Write access only in the commissioning state, encoder (p0010 = 4).
110: Write access only in the commissioning state, motor (p0010 = 3).
111: Write access only in the commissioning state, power unit (p0010 = 2).
112: Write access only in the quick commissioning mode (p0010 = 1).
113: Write access only in the ready mode (p0010 = 0).
114: Write access only in the commissioning state, parameter reset (p0010 = 30).
115: Write access only in the Safety Integrated commissioning state (p0010 = 95).
116: Write access only in the commissioning state, technological application/units (p0010 = 5).
117: Write access only in the commissioning state (p0010 not equal to 0).
118: Write access only in the commissioning state, download (p0010 = 29).
119: Parameter may not be written in download.
120: Write access only in the commissioning state, drive basis configuration (device: p0009 = 3).
121: Write access only in the commissioning state, define drive type (device: p0009 = 2).
122: Write access only in the commissioning state, data set basis configuration (device: p0009 = 4).
123: Write access only in the commissioning state, device configuration (device: p0009 = 1).
124: Write access only in the commissioning state, device download (device: p0009 = 29).
125: Write access only in the commissioning state, device parameter reset (device: p0009 = 30).
126: Write access only in the commissioning state, device ready (device: p0009 = 0).
127: Write access only in the commissioning state, device (device: p0009 not equal to 0).

- 129: Parameter may not be written in download.
- 130: Transfer of the master control is inhibited via BI: p0806.
- 131: Required BICO interconnection not possible because BICO output does not supply floating value
- 132: Free BICO interconnection inhibited via p0922.
- 133: Access method not defined.
- 200: Below the valid values.
- 201: Above the valid values.
- 202: Cannot be accessed from the Basic Operator Panel (BOP).
- 203: Cannot be read from the Basic Operator Panel (BOP).
- 204: Write access not permitted.

Remedy:

- enter the correct value in the specified parameter.
- identify the parameter that restricts the limits of the specified parameter.

F01043 Fatal error at project download

Message value: Fault cause: %1

Drive object: All objects

Reaction: Infeed: OFF2 (OFF1)
Servo: OFF2 (OFF1, OFF3)
Vector: OFF2 (OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: A fatal error was detected when downloading a project using the commissioning software.
Fault value (r0949, interpret decimal):

- 1: Device status cannot be changed to Device Download (drive object ON?).
- 2: Incorrect drive object number.
- 3: A drive object that has already been deleted is deleted again.
- 4: Deleting of a drive object that has already been registered for generation.
- 5: Deleting a drive object that does not exist.
- 6: Generating an undeleted drive object that already existed.
- 7: Regenerating a drive object already registered for generation.
- 8: Maximum number of drive objects that can be generated exceeded.
- 9: Error while generating a device drive object.
- 10: Error while generating target topology parameters (p9902 and p9903).
- 11: Error while generating a drive object (global component).
- 12: Error while generating a drive object (drive component).
- 13: Unknown drive object type.
- 14: Drive status cannot be changed to "ready for operation" (p0947 and p0949).
- 15: Drive status cannot be changed to drive download.
- 16: Device status cannot be changed to "ready for operation".
- 17: It is not possible to download the topology. The component wiring should be checked, taking into account the various messages/signals.
- 18: A new download is only possible if the factory settings are restored for the drive unit.
- 19: The slot for the option module has been configured several times (e.g. CAN and COMM BOARD)
- 20: The configuration is inconsistent (e.g. CAN for Control Unit, however no CAN configured for drive objects A_INF, SERVO or VECTOR).

Remedy:

- use the current version of the commissioning software.
- modify the offline project and carry out a new download (e.g. compare the number of drive objects, motor, encoder, power unit in the offline project and at the drive).
- change the drive state (is a drive rotating or is there a message/signal?).
- carefully note any other messages/signals and remove their cause.

F01044 CU: Descriptive data error

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: POWER ON

Cause: An error was detected when loading the descriptive data saved in the non-volatile memory.

Remedy: Replace the memory card or Control Unit.

A01045	CU: Configuring data invalid
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	An error was detected when evaluating the parameter files PSxxxxxyy.ACX, PTxxxxyy.ACX, CAxxxxyy.ACX, or CCxxxxyy.ACX saved in the non-volatile memory. Alarm value (r2124, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	Restore the factory setting using (p0976 = 1) and re-load the project to the drive unit. Operation without any restrictions is then possible. After downloading the project, save the parameters in STARTER using "Copy RAM to ROM" or with p0977 = 1. This overwrites the incorrect parameter files in the non-volatile memory.

A01049	CU: It is not possible to write to file
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	It is not possible to write into a write-protected file (PSxxxxxx.acx). The write request was interrupted. Alarm value (r2124, interpret decimal): Drive object number.
Remedy:	Check whether the "write protected" attribute has been set for the files in the non-volatile memory under .../USER/SINAMICS/DATA/... When required, remove write protection and save again (e.g. set p0977 to 1).

F01050	Memory card and device incompatible
Message value:	-
Drive object:	All objects
Reaction:	Infeed: OFF2 (NONE, OFF1) Servo: OFF2 (NONE, OFF1, OFF3) Vector: OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The memory card and the device type do not match (e.g. a memory card for SINAMICS S is inserted in SINAMICS G).
Remedy:	- insert the matching memory card. - use the matching Control Unit or power unit.

F01054	CU: System limit exceeded
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	At least one system overload has been identified. Fault value (r0949, interpret decimal): 1: Computing time load too high (r9976[1]). 5: Peak load too high (r9976[5]). See also: r9976 (System utilization)
Remedy:	Re fault value = 1, 5: - check the sampling times and adjust if necessary (p0115). - deactivate the function module. - deactivate the drive object. - remove the drive object from the target topology.

A01064 (F)	CU: Internal error (CRC)
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	CRC error in the Control Unit program memory
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
Reaction upon F:	Infeed: NONE (OFF1, OFF2) Servo: NONE (OFF1, OFF2, OFF3, STOP2) Vector: NONE (OFF1, OFF2, OFF3, STOP2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
A01065	Drive: Fault on non-active encoder
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	One or several non-active encoders indicate an error.
Remedy:	Remove the error for the non-active encoder.
F01068	CU: Data memory, memory overflow
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A data memory area has been overloaded. Fault value (r0949, interpret binary): Bit 0 = 1: High-speed data memory 1 overloaded Bit 1 = 1: High-speed data memory 2 overloaded Bit 2 = 1: High-speed data memory 3 overloaded Bit 3 = 1: High-speed data memory 4 overloaded
Remedy:	- deactivate the function module. - deactivate the drive object. - remove the drive object from the target topology.
A01099	Tolerance window of time synchronization exited
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The time master exited the selected tolerance window for time synchronization. See also: p3109 (RTC real time synchronization, tolerance window)
Remedy:	Select the re-synchronization interval so that the synchronization deviation between the time master and drive system lies within the tolerance window. See also: r3108 (RTC last synchronization deviation)
A01100	CU: Memory card withdrawn
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The memory card (non-volatile memory) was withdrawn during operation. Notice: It is not permissible for the memory card to be withdrawn or inserted under voltage.

Remedy:

- power down the drive system.
- re-insert the memory card that was withdrawn - this card must match the drive system.
- power up the drive system again.

F01105 (A) CU: Insufficient memory

Message value: %1
Drive object: All objects
Reaction: OFF1
Acknowledge: POWER ON
Cause: Too many functions have been configured on this Control Unit (e.g. too many drives, function modules, data sets, OA applications, blocks, etc).
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:

- change the configuration on this Control Unit (e.g. fewer drives, function modules, data sets, OA applications, blocks, etc).
- use an additional Control Unit.

Reaction upon A: NONE
Acknowl. upon A: NONE

F01107 CU: Data save in the non-volatile memory unsuccessful

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A data save in the non-volatile memory was not able to be successfully carried out.

- non-volatile memory is defective.
- insufficient space in the non-volatile memory.

Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:

- try to save again.
- replace the memory card or Control Unit.

F01110 CU: More than one SINAMICS G on one Control Unit

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: More than one SINAMICS G type power unit is being operated from the Control Unit.
Fault value (r0949, interpret decimal):
Number of the second drive with a SINAMICS G type power unit.
Remedy: Only one SINAMICS G drive type is permitted.

F01111 CU: Mixed operation of drive units illegal

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Illegal operation of various drive units on one Control Unit:

- SINAMICS S together with SINAMICS G
- SINAMICS S together with SINAMICS S Value or Combi

Fault value (r0949, interpret decimal):
Number of the first drive object with a different power unit type.
Remedy: Only power units of one particular drive type may be operated with one Control Unit.

F01112 CU: Power unit not permissible

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The connected power unit cannot be used together with this Control Unit.
 Fault value (r0949, interpret decimal):
 1: Power unit is not supported (e.g. PM240).
 2: DC/AC power unit connected to CU310 not permissible.
Remedy: Replace the power unit that is not permissible by a component that is permissible.

F01120 (A) Terminal initialization has failed

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An internal software error occurred while the terminal functions were being initialized.
 Fault value (r0949, interpret hexadecimal):
 Only for internal Siemens troubleshooting.
Remedy:
 - carry out a POWER ON (power off/on) for all components.
 - upgrade firmware to later version.
 - contact the Hotline.
 - replace the Control Unit.
 Reaction upon A: NONE
 Acknowl. upon A: NONE

F01122 (A) Frequency at the measuring probe input too high

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: The frequency of the pulses at the measuring probe input is too high.
 Fault value (r0949, interpret decimal):
 1: DI/DO 9 (X122.8)
 2: DI/DO 10 (X122.10)
 4: DI/DO 11 (X122.11)
 8: DI/DO 13 (X132.8)
 16: DI/DO 14 (X132.10)
 32: DI/DO 15 (X132.11)
 64: DI/DO 8 (X122.7)
 128: DI/DO 12 (X132.7)
Remedy: Reduce the frequency of the pulses at the measuring probe input.
 Reaction upon A: NONE
 Acknowl. upon A: NONE

F01150 CU: Number of instances of a drive object type exceeded

Message value: Drive object type: %1, number permitted: %2, current number: %3
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The maximum permissible number of instances of a drive object type was exceeded.
 Fault value (r0949, interpret hexadecimal):
 Byte 1: Drive object type (p0107).
 Byte 2: Max. permissible number of instances for this drive object type.
 Byte 3: Actual number of instances for this drive object type.

Remedy:

- power down the unit.
- suitably restrict the number of instances of a drive object type by reducing the number of inserted components.
- re-commission the unit.

F01151 CU: Number of drive objects of a category exceeded

Message value: Drive object category: %1, number permitted: %2, current number: %3

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The maximum permissible number of drive objects of a category was exceeded.
Fault value (r0949, interpret hexadecimal):
Byte 1: Drive object category.
Byte 2: Max. permissible number for this drive object category.
Byte 3: Actual number for this drive object category.

Remedy:

- power down the unit.
- suitably restrict the number of drive objects of the specified category by reducing the number of inserted components.
- re-commission the unit.

F01200 CU: Time slice management internal software error

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: A time slice management error has occurred.
It is possible that the sampling times have been inadmissibly set.
Fault value (r0949, interpret hexadecimal):
998: Too many time slices occupied by OA (e.g. DCC)
999: Too many time slices occupied by the basic system
Too many different sampling times may have been set.
Further values for internal Siemens troubleshooting.

Remedy:

- check the sampling time setting (p0112, p0115, p4099).
- contact the Hotline.

F01205 CU: Time slice overflow

Message value: %1

Drive object: All objects

Reaction: OFF2

Acknowledge: POWER ON

Cause: Insufficient processing time is available for the existing topology.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy:

- reduce the number of drives.
- increase the sampling times.

F01221 CU: Bas clk cyc too low

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: The closed-loop control / monitoring cannot maintain the envisaged clock cycle.
The runtime of the closed-loop control/monitoring is too long for the particular clock cycle or the computing time remaining in the system is not sufficient for the closed-loop control/monitoring.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.

Remedy: Increase the basic clock cycle of DRIVE-CLiQ communication.
See also: p0112 (Sampling times presetting p0115)

A01223	CU: Sampling time inconsistent
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	When changing a sampling time (p0115[0], p0799 or p4099), inconsistency between the clock cycles has been identified. Alarm value (r2124, interpret decimal): 1: Value, low minimum value. 2: Value, high maximum value. 3: Value not a multiple of 1.25 µs. 4: Value does not match clock-cycle synchronous PROFIBUS operation. 5: Value not a multiple of 125 µs. 6: Value not a multiple of 250 µs. 7: Value not a multiple of 375 µs. 8: Value not a multiple of 400 µs. 10: Special restriction of the drive object violated. 20: On a SERVO with a sampling time of 62.5 µs, more than two drive objects or one drive object of a type other than SERVO have been detected on the same DRIVE-CLiQ line (a maximum of two SERVO type drive objects are permitted). 21: Value can be a multiple of the current controller sampling time of a servo or vector drive in the system (e.g. for TB30, the values of all of the indices should be taken into account). 30: Value less than 31.25 µs. 31: Value less than 62.5 µs. 32: Value less than 125 µs. 40: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs. Further, none of the nodes has a sampling time of less than 125 µs. 41: A chassis unit was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 250 µs. 42: An Active Line Module was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is less than 125 µs. 43: A Voltage Sensing Module (VSM) was identified on the DRIVE-CLiQ line as a node. Further, the highest common denominator of the sampling times of all of the nodes connected to the line is not equal to the current controller sampling time of the drive object of the VSM. 44: The highest common denominator of the sampling times of all of the components connected to the DRIVE-CLiQ line is not the same for all components of this drive object (e.g. there are components on different DRIVE-CLiQ lines on which different highest common denominators are generated). 52: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 31.25 µs. 54: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 62.5 µs. 56: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 125 µs. 58: Nodes have been identified on the DRIVE-CLiQ line whose highest common denominator of the sampling times is less than 250 µs. 99: Inconsistency of cross drive objects detected. 116: Recommended clock cycle in r0116[0...1]. General note: The topology rules should be noted when connecting up DRIVE-CLiQ (refer to the appropriate product documentation). The parameters of the sampling times can also be changed with automatic calculations. Example for highest common denominator: 125 µs, 125 µs, 62.5 µs --> 62.5 µs
Remedy:	- check the DRIVE-CLiQ cables. - set a valid sampling time. See also: p0115, p0799, p4099

A01224	CU: Pulse frequency inconsistent
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	When changing the minimum pulse frequency (p0113) inconsistency between the pulse frequencies was identified. Alarm value (r2124, interpret decimal): 1: Value, low minimum value. 2: Value, high maximum value. 3: Resulting sampling time is not a multiple of 1.25 µs. 4: Value does not match clock-cycle synchronous PROFIBUS operation. 10: Special restriction of the drive object violated. 99: Inconsistency of cross drive objects detected. 116: Recommended clock cycle in r0116[0...1].
Remedy:	Set a valid pulse frequency. See also: p0113 (Minimum pulse frequency, selection)

F01250	CU: CU-EEPROM incorrect read-only data
Message value:	%1
Drive object:	All objects
Reaction:	NONE (OFF2)
Acknowledge:	POWER ON
Cause:	Error when reading the read-only data of the EEPROM in the Control Unit. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON. - replace the Control Unit.

A01251	CU: CU-EEPROM incorrect read-write data
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	Error when reading the read-write data of the EEPROM in the Control Unit. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	For alarm value r2124 < 256, the following applies: - carry out a POWER ON. - replace the Control Unit. For alarm value r2124 >= 256, the following applies: - for the drive object with this alarm, clear the fault memory (p0952 = 0). - as an alternative, clear the fault memory of all drive objects (p2147 = 1). - replace the Control Unit.

F01255	CU: Option Board EEPROM read-only data error
Message value:	%1
Drive object:	All objects
Reaction:	NONE (OFF2)
Acknowledge:	POWER ON
Cause:	Error when reading the read-only data of the EEPROM in the Option Board. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON. - replace the Control Unit.

A01256	CU: Option Board EEPROM read-write data error
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	Error when reading the read-write data of the EEPROM in the Option Board. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON. - replace the Control Unit.
F01303	DRIVE-CLiQ component does not support the required function
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A function requested by the Control Unit is not supported by a DRIVE-CLiQ component. Fault value (r0949, interpret decimal): 1: The component does not support the deactivation. 101: The Motor Module does not support an internal armature short-circuit. 102: The Motor Module does not support the deactivation. 201: The Sensor Module does not support actual value inversion (p0410.0 = 1) when using a Hall sensor (p0404.6 = 1) for the commutation. 202: The Sensor Module does not support parking/unparking. 203: The Sensor Module does not support the deactivation. 204: The firmware of this Terminal Module 15 (TM15) does not support the application TM15DI/DO. 205: The Sensor Module does not support the selected temperature evaluation (r0458). 206: The firmware of this Terminal Modules TM41/TM31/TM15 refers to an old firmware version. It is urgently necessary to upgrade the firmware to ensure disturbance-free operation. 207: The power unit with this hardware version does not support operation with device supply voltages of less than 380 V. 208: The Sensor Module does not support deselection of commutation with zero mark (via p0430.23). 211: The Sensor Module does not support single-track encoders (r0459.10)
Remedy:	Upgrade the firmware of the DRIVE-CLiQ component involved. Re fault value = 205: Check parameter p0600 and p0601 and if required, adapt interpretation. Re fault value = 207: Replace the power unit or if required set the device supply voltage higher (p0210). Re fault value = 208: Check parameter p0430.23 and reset if necessary.
A01304 (F)	Firmware version of DRIVE-CLiQ component is not up-to-date
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The non-volatile memory has a more recent firmware version than the one in the connected DRIVE-CLiQ component. Alarm value (r2124, interpret decimal): Component number of the DRIVE-CLiQ component involved.
Remedy:	Update the firmware (p7828, p7829 and commissioning software).
Reaction upon F:	NONE
Acknowled. upon F:	IMMEDIATELY

F01305	Topology: Component number missing
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The component number from the topology was not parameterized (p0121 (for power unit, refer to p0107), p0131 (for servo/vector drives, refer to p0107), p0141, p0151, p0161). Fault value (r0949, interpret decimal): The fault value includes the particular data set number. Note: The fault also occurs if speed encoders have been configured (p0187 to p0189) but no component numbers exist for them. In this case, the fault value includes the drive data set number plus 100 * encoder number (e.g. 3xx, if a component number was not entered in p0141 for the third encoder (p0189)). See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189
Remedy:	Enter the missing component number or remove the component and restart commissioning. See also: p0121, p0131, p0141, p0142, p0151, p0161, p0186, p0187, p0188, p0189

A01306	Firmware of the DRIVE-CLiQ component being updated
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	Firmware update is active for at least one DRIVE-CLiQ component. Alarm value (r2124, interpret decimal): Component number of the DRIVE-CLiQ component.
Remedy:	None necessary. This alarm automatically disappears after the firmware has been updated.

A01314	Topology: Component must not be present
Message value:	Component number: %1, Component class: %2, Connection number: %3
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	For a component, "deactivate and not present" is set but this component is still in the topology. Alarm value (r2124, interpret hexadecimal): Byte 1: Component number Byte 2: Component class of the component Byte 3: Connection number Note: Component class and connection number are described in F01375.
Remedy:	- remove the corresponding component. - change the setting "deactivate and not present". Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison). See also: p0105, p0125, p0145, p0155

A01315	Drive object not ready for operation
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	For the active drive object involved, at least one activated component is missing. Note: All other active and operational drive objects can be in the "RUN" state.

Remedy: The alarm automatically disappears again with the following actions:

- deactivate the drive object involved (p0105 = 0).
- deactivate the components involved (p0125 = 0, p0145 = 0, p0155 = 0, p0165 = 0).
- re-insert the components involved.

See also: p0105, p0125, p0145, p0155

A01316 Drive object inactive and again ready for operation

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: If, when inserting a component of the target topology, an inactive, non-operational drive object becomes operational again. The associated parameter of the component is, in this case, set to "activate" (p0125, p0145, p0155, p0165).
Note:
 This is the only message that is displayed for a deactivated drive object.

Remedy: The alarm automatically disappears again with the following actions:

- activate the drive object involved (p0105 = 1).
- again withdraw the components involved.

See also: p0105 (Activate/deactivate drive object)

A01317 (N) Deactivated component again present

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: If a component of the target topology for an active drive object is inserted and the associated parameter of the component is set to "deactivate" (p0125, p0145, p0155, p0165).
Note:
 This is the only message that is displayed for a deactivated component.

Remedy: The alarm automatically disappears again with the following actions:

- activate the components involved (p0125 = 1, p0145 = 1, p0155 = 1, p0165 = 1).
- again withdraw the components involved.

See also: p0125 (Activate/deactivate power unit components), p0145, p0155

Reaction upon N: NONE

Acknowl. upon N: NONE

A01318 BICO: Deactivated interconnections present

Message value: %1

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: This alarm is used in the following cases:

- If an inactive/non-operational drive object is active again/ready for operation
- If there are items in the list of BI/CI parameters (r9498[0...29], r9499[0...29])
- If the BICO interconnections saved in the list of BI/CI parameters (r9498[0...29], r9499[0...29]) have actually been changed

Remedy: Reset alarm:

- Set p9496 to 1 or 2

or

- deactivate the drive object again.

A01319	Inserted component not initialized
Message value:	-
Drive object:	A_INF, B_INF, CU_LINK, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Initialization is required for at least one inserted component. This is only possible if the pulses are inhibited for all the drive objects.
Remedy:	Activate pulse inhibit for all drive objects.

A01320	Topology: Drive object number does not exist in configuration
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	A drive object number is missing in p0978 Alarm value (r2124, interpret decimal): Index of p0101 under which the missing drive object number can be determined.
Remedy:	Set p0009 to 1 and change p0978: Rules: - p0978 must include all of the drive object numbers (p0101). - it is not permissible for a drive object number to be repeated. - by entering a 0, the drive objects with PZD are separated from those without PZD. - only 2 partial lists are permitted. After the second 0, all values must be 0. - dummy drive object numbers (255) are only permitted in the first partial list.

A01321	Topology: Drive object number does not exist in configuration
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	p0978 contains a drive object number that does not exist. Alarm value (r2124, interpret decimal): Index of p0978 under which the drive object number can be determined.
Remedy:	Set p0009 to 1 and change p0978: Rules: - p0978 must include all of the drive object numbers (p0101). - it is not permissible for a drive object number to be repeated. - by entering a 0, the drive objects with PZD are separated from those without PZD. - only 2 partial lists are permitted. After the second 0, all values must be 0. - dummy drive object numbers (255) are only permitted in the first partial list.

A01322	Topology: Drive object number present twice in configuration
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	A drive object number is present more than once in p0978. Alarm value (r2124, interpret decimal): Index of p0978 under which the involved drive object number is located.
Remedy:	Set p0009 to 1 and change p0978: Rules: - p0978 must include all of the drive object numbers (p0101). - it is not permissible for a drive object number to be repeated. - by entering a 0, the drive objects with PZD are separated from those without PZD. - only 2 partial lists are permitted. After the second 0, all values must be 0. - dummy drive object numbers (255) are only permitted in the first partial list.

A01323	Topology: More than two partial lists created
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	Partial lists are available more than twice in p0978. After the second 0, all must be 0. Alarm value (r2124, interpret decimal): Index of p0978 under which the illegal value is located.
Remedy:	Set p0009 to 1 and change p0978: Rules: - p0978 must include all of the drive object numbers (p0101). - it is not permissible for a drive object number to be repeated. - by entering a 0, the drive objects with PZD are separated from those without PZD. - only 2 partial lists are permitted. After the second 0, all values must be 0. - dummy drive object numbers (255) are only permitted in the first partial list.
A01324	Topology: Dummy drive object number incorrectly created
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	In p0978, dummy drive object numbers (255) are only permitted in the first partial list. Alarm value (r2124, interpret decimal): Index of p0978 under which the illegal value is located.
Remedy:	Set p0009 to 1 and change p0978: Rules: - p0978 must include all of the drive object numbers (p0101). - it is not permissible for a drive object number to be repeated. - by entering a 0, the drive objects with PZD are separated from those without PZD. - only 2 partial lists are permitted. After the second 0, all values must be 0. - dummy drive object numbers (255) are only permitted in the first partial list.
F01325	Topology: Component Number not present in target topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The component configured in a parameter (e.g. p0121, p0131, etc.) is not present in the target topology. Alarm value (r2124, interpret decimal): Configured Component Number that is not present in target topology.
Remedy:	Establish topology and DO configuration consistency.
A01330	Topology: Quick commissioning not possible
Message value:	Fault cause: %1, supplementary information: %2, preliminary component number: %3
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	Unable to carry out a quick commissioning. The existing actual topology does not fulfill the requirements. Alarm value (r2124, interpret hexadecimal): ccccbbaa hex: cccc = preliminary component number, bb = supplementary information, aa = fault cause aa = 01 hex = 1 dec: On one component illegal connections were detected. - bb = 01 hex = 1 dec: For a Motor Module, more than one motor with DRIVE-CLiQ was detected. - bb = 02 hex = 2 dec: For a motor with DRIVE-CLiQ, the DRIVE-CLiQ cable is not connected to a Motor Module.

aa = 02 hex = 2 dec:

The topology contains too many components of a particular type.

- bb = 01 hex = 1 dec: There is more than one master Control Unit.
- bb = 02 hex = 2 dec: There is more than 1 infeed (8 for a parallel circuit configuration).
- bb = 03 hex = 3 dec: There are more than 10 Motor Modules (8 for a parallel circuit configuration).
- bb = 04 hex = 4 dec: There are more than 9 encoders.
- bb = 05 hex = 5 dec: There are more than 8 Terminal Modules.
- bb = 07 hex = 7 dec: Unknown component type
- bb = 08 hex = 8 dec: There are more than 6 drive slaves.
- bb = 09 hex = 9 dec: Connection of a drive slave not permitted.
- bb = 0a hex = 10 dec: There is no drive master.
- bb = 0b hex = 11 dec: There is more than one motor with DRIVE-CLiQ for a parallel circuit.
- cccc: Not used.

aa = 03 hex = 3 dec:

More than 16 components are connected at a DRIVE-CLiQ socket of the Control Unit.

- bb = 0, 1, 2, 3 means e.g. detected at the DRIVE-CLiQ socket X100, X101, X102, X103.
- cccc: Not used.

aa = 04 hex = 4 dec:

The number of components connected one after the other is greater than 125.

- bb: Not used.
- cccc = preliminary component number of the first component and component that resulted in the fault.

aa = 05 hex = 5 dec:

The component is not permissible for SERVO.

- bb = 01 hex = 1 dec: SINAMICS G available.
- bb = 02 hex = 2 dec: Chassis available.
- cccc = preliminary component number of the first component and component that resulted in the fault.

aa = 06 hex = 6 dec:

On one component illegal EEPROM data was detected. These must be corrected before the system continues to boot.

- bb = 01 hex = 1 dec: The Order No. [MLFB] of the power unit that was replaced includes a space retainer. The space retainer (*) must be replaced by a correct character.
- cccc = preliminary component number of the component with illegal EEPROM data.

aa = 07 hex = 7 dec:

The actual topology contains an illegal combination of components.

- bb = 01 hex = 1 dec: Active Line Module (ALM) and Basic Line Module (BLM).
- bb = 02 hex = 2 dec: Active Line Module (ALM) and Smart Line Module (SLM).
- bb = 03 hex = 3 dec: SIMOTION control (e.g. SIMOTION D445) and SINUMERIK component (e.g. NX15).
- bb = 04 hex = 4 dec: SINUMERIK control (e.g. SINUMERIK 730.net) and SIMOTION component (e.g. CX32).
- cccc: Not used.

Note:

Connection type and connection number are described in F01375.

See also: p0097 (Select drive object type), r0098 (Actual device topology), p0099 (Device target topology)

Remedy:

- adapt the output topology to the permissible requirements.
- carry out commissioning using the commissioning software.
- for motors with DRIVE-CLiQ, connect the power and DRIVE-CLiQ cable to the same Motor Module (Single Motor Module: DRIVE-CLiQ at X202, Double Motor Module: DRIVE-CLiQ from motor 1 (X1) to X202, from motor 2 (X2) to X203).

Re aa = 06 hex = 6 dec and bb = 01 hex = 1 dec:

Correct the order number when commissioning using the commissioning software.

See also: p0097 (Select drive object type), r0098 (Actual device topology), p0099 (Device target topology)

A01331

Topology: At least one component not assigned to a drive object

Message value:

Component number: %1

Drive object:

All objects

Reaction:

NONE

Acknowledge:

NONE

Cause:

At least one component is not assigned to a drive object.

- when commissioning, a component was not able to be automatically assigned to a drive object.
- the parameters for the data sets are not correctly set.

Alarm value (r2124, interpret decimal):

Component number of the unassigned component.

Remedy: This component is assigned to a drive object.
Check the parameters for the data sets.
Examples:
- power unit (p0121).
- motor (p0131, p0186).
- encoder interface (p0140, p0141, p0187 ... p0189).
- encoder (p0140, p0142, p0187 ... p0189).
- Terminal Module (p0151).
- option board (p0161).

F01340 Topology: Too many components on one line

Message value: Component number or connection number: %1, fault cause: %2
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: For the selected communications clock cycle, too many DRIVE-CLiQ components are connected to one line of the Control Unit.
Fault value (r0949, interpret hexadecimal):
xyy hex: x = fault cause, yy = component number or connection number.
1yy:
The communications clock cycle of the DRIVE-CLiQ connection on the CU is not sufficient for all read transfers.
2yy:
The communications clock cycle of the DRIVE-CLiQ connection on the CU is not sufficient for all write transfers.
3yy:
Cyclic communication is fully utilized.
4yy:
The DRIVE-CLiQ cycle starts before the earliest end of the application. An additional dead time must be added to the control. Sign-of-life errors can be expected.
5yy:
Internal buffer overflow for net data of a DRIVE-CLiQ connection.
6yy:
Internal buffer overflow for receive data of a DRIVE-CLiQ connection.
7yy:
Internal buffer overflow for send data of a DRIVE-CLiQ connection.
Remedy: Check the DRIVE-CLiQ connection:
Reduce the number of components on the DRIVE-CLiQ line involved and distribute these to other DRIVE-CLiQ connections of the Control Unit. This means that communication is uniformly distributed over several communication lines.
Re fault value = 1yy - 4yy in addition:
- increase the sampling times (p0112, p0115).

F01354 Topology: Actual topology indicates an illegal component

Message value: Fault cause: %1, component number: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The actual topology indicates at least one illegal component.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = cause.
xx = 1: Component at this Control Unit not permissible.
xx = 2: Component in combination with another component not permissible.
Note:
Pulse enable is prevented.
Remedy: Remove the illegal components and restart the system.

F01355	Topology: Actual topology changed
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The device target topology (p0099) does not correspond to the device actual topology (r0098). The fault only occurs if the topology was commissioned using the automatic internal device mechanism and not using the commissioning software. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting. See also: r0098 (Actual device topology), p0099 (Device target topology)
Remedy:	One of the following counter-measures can be selected if no faults have occurred in the topology detection itself: If commissioning was still not completed: - carry out a self-commissioning routine (starting from p0009 = 1). General: Set p0099 to r0098, set p0009 to 0; for existing Motor Modules, this results in servo drives being automatically generated (p0107). Generating servo drives: Set p0097 to 1, set p0009 to 0. Generating vector drives: Set p0097 to 2, set p0009 to 0. Generating vector drives with parallel circuit: Set p0097 to 12, set p0009 to 0. In order to set configurations in p0108, before setting p0009 to 0, it is possible to first set p0009 to 2 and modify p0108. The index corresponds to the drive object (p0107). If commissioning was already completed: - re-establish the original connections and re-connect power to the Control Unit. - restore the factory setting for the complete equipment (all of the drives) and allow automatic self-commissioning again. - change the device parameterization to match the connections (this is only possible using the commissioning software). Notice: Topology changes that result in this fault being generated cannot be accepted by the automatic function in the device, but must be transferred using the commissioning software and parameter download. The automatic function in the device only allows constant topology to be used. Otherwise, when the topology is changed, all of the previous parameter settings are lost and replaced by the factory setting. See also: r0098 (Actual device topology)
F01356	Topology: Defective components in actual topology
Message value:	Fault cause: %1, Component number: %2, Connection number: %3
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The actual topology indicates at least one defective DRIVE-CLiQ component. Fault value (r0949, interpret hexadecimal): zzyyxx hex: zz = connection number of component before the defective component yy = component number of component before the defective component xx = fault cause xx = 1: Component at this Control Unit not permissible. Note: Pulse enable is withdrawn and prevented.
Remedy:	Remove the defective components and restart the system.

F01360	Topology: Actual topology not permissible
Message value:	Fault cause: %1, preliminary component number: %2
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The detected actual topology is not permissible. Fault value (r0949, interpret hexadecimal): ccccbbaa hex: cccc = preliminary component number, aa = fault cause aa = 01 hex = 1 dec: Too many components were detected at the Control Unit. The maximum permissible number of components is 199. aa = 02 hex = 2 dec: The component type of a component is not known. aa = 03 hex = 3 dec: It is illegal to combine ALM and BLM. aa = 04 hex = 4 dec: It is illegal to combine ALM and SLM. aa = 05 hex = 5 dec: It is illegal to combine BLM and SLM. aa = 06 hex = 6 dec: A CX32 was not directly connected to a permitted Control Unit. aa = 07 hex = 7 dec: An NX10 or NX15 was not directly connected to a permitted Control Unit. aa = 08 hex = 8 dec: A component was connected to a Control Unit that is not permitted for this purpose. aa = 0A hex = 10 dec: Too many components of a particular type detected. aa = 0B hex = 11 dec: Too many components of a particular type detected on a single line. Note: The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Re fault cause = 1: Change the configuration. Connect less than 199 components to the Control Unit. Re fault cause = 2: Remove the component with unknown component type. Re fault cause = 3, 4, 5: Establish a valid combination. Re fault cause = 6, 7: Connect the expansion module directly to a permitted Control Unit. Re fault cause = 8: Remove component or use a permissible component. Re fault cause = 10, 11: Reduce the number of components.
A01361	Topology: Actual topology contains SINUMERIK and SIMOTION components
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The detected actual topology contains SINUMERIK and SIMOTION components. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled. Alarm value (r2124, interpret hexadecimal): ddccbbbaa hex: cc = fault cause, bb = component class of the actual topology, aa = component number of the component cc = 01 hex = 1 dec: An NX10 or NX15 was connected to a SIMOTION control. cc = 02 hex = 2 dec: A CX32 was connected to a SINUMERIK control.

Remedy: Re alarm value = 1:
Replace all NX10 or NX15 by a CX32.
Re alarm value = 2:
Replace all CX32 by an NX10 or NX15.

A01362 Topology: Topology rule(s) broken

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: At least one topology rule for the SINAMICS S120 Combi has been broken.
In the event of a fault, the ramping up of the drive system is aborted and closed-loop drive control is not enabled.
Fault value (r0949, interpret decimal):
The fault value indicates which rule has been broken.
1: The S120 Combi may only be wired via DRIVE-CLiQ socket X200 to X1 on the NCU.
2: Only one Terminal Module 54F (TM54F) may be connected to DRIVE-CLiQ socket X2 on the NCU. If a TM54 is being used, it may only be wired via X500 to X2 on the NCU.
3: Only one DRIVE-CLiQ Hub Module (hub) may be connected to DRIVE-CLiQ socket X3 on the NCU. If a hub is being used, it may only be wired via X500 to X3 on the NCU.
4: Only Sensor Modules may be connected to DRIVE-CLiQ sockets X201 through X203 (3-axis) or X204 (4-axis) on the S120 Combi.
5: Only one Single Motor Module or one Double Motor Module may be connected to DRIVE-CLiQ socket X205 (X204 is not available for 3-axis). The module must be wired to the S120 Combi via X200.
6: Only certain Motor Modules may be used for expansion axes.
7: If a Single Motor Module is being used as the first expansion axis, only one more Single Motor Module may be connected (via X200 to X201 on the first Single Motor Module).
8: Only Sensor Modules may be connected to the corresponding DRIVE-CLiQ socket X202 on any Single Motor Modules which may be present.
9: On the second Single Motor Module there must be nothing connected to X201.
10: If a Double Motor Module is used as an expansion axis, only Sensor Modules may be connected to X202 and X203.
11: On the Double Motor Module there must be nothing connected to X201.
12: On the Terminal Module 54F (TM54F) there must be nothing connected to X501.
13: On the DRIVE-CLiQ Hub Module, only Sensor Modules Cabinet (SMC) and Sensor Modules External (SME) may be connected to X501 through X505.
Remedy: Evaluate the fault value and ensure compliance with the corresponding topology rule(s).

F01375 Topology: Actual topology, duplicate connection between two components

Message value: Preliminary component number: %1, component class: %2, connection number: %3
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: When detecting the actual topology, a ring-type connection was detected.
Fault value (r0949, interpret hexadecimal):
ccbbaaaa hex:
cc = connection number
bb = component class
aaaa = preliminary component number of a component included in the ring
Component class:
1: Control Unit.
2: Motor Module.
3: Line Module.
4: Sensor Module (SM).
5: Voltage Sensing Module (VSM).
6: Terminal Module (TM).
7: DRIVE-CLiQ Hub Module.
8: Controller Extension 32 (CX32, NX10, NX15).
49: DRIVE-CLiQ components (non-listed components).
50: Option Slot (e.g. Terminal Board 30).
60: Encoder (e.g. EnDat).
70: Motor with DRIVE-CLiQ.

Remedy:	Component type: Precise designation within a component class (e.g. "SMC20"). Connection number: Consecutive numbers, starting from zero, of the appropriate connection or slot (e.g. DRIVE-CLiQ connection X100 on the Control Unit has the connection number 0). Output the fault value and remove the specified connection. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
F01380	Topology: Actual topology, defective EEPROM
Message value:	Preliminary component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	POWER ON
Cause:	When detecting the actual topology, a component with a defective EEPROM was detected. Fault value (r0949, interpret hexadecimal): bbbbaaaa hex: aaaa = preliminary component number of the defective components
Remedy:	Output the fault value and remove the defected component.
A01381	Topology: Comparison power unit shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a power unit in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01382	Topology: Comparison Sensor Module shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a Sensor Module in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01383	Topology: Comparison Terminal Module shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a Terminal Module in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01384	Topology: Comparison DRIVE-CLiQ Hub Module shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a DRIVE-CLiQ Hub Module in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01385	Topology: Comparison CX32 shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a controller extension 32 (CX32) in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01386	Topology: Comparison DRIVE-CLiQ component shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a DRIVE-CLiQ component in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01387	Topology: Comparison option slot component shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a option slot component in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01388	Topology: Comparison EnDat encoder shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected an EnDat encoder in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01389	Topology: Comparison motor with DRIVE-CLiQ shifted
Message value:	Component number: %1, Component class: %2, Component (target): %3, Connection number: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a motor with DRIVE-CLiQ in the actual topology that has been shifted with respect to the target topology. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number cc = component number bb = component class aa = component number of the component shifted in the target topology Note: The connection in the actual topology where the shifted component was detected is described in dd, cc and bb. Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - undo the change to the actual topology by changing over the DRIVE-CLiQ cables. - commissioning software: Go online, upload the drive unit, adapt the topology offline and download the modified project. - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01416	Topology: Comparison additional component in actual topology
Message value:	Component number: %1, Component class: %2, Connection number: %3
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has found a component in the actual topology which is not specified in the target topology. The alarm value includes the component number and connection number of the component with which the additional component is connected. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: cc = connection number bb = component class of the additional component aa = component number Note: - component class and connection number are described in F01375. - components that are connected to this additional component are not operational.
Remedy:	Adapting the topologies: - remove the additional component in the actual topology. - download the target topology that matches the actual topology (commissioning software). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01420	Topology: Comparison a component is different
Message value:	Component number: %1, component class target: %2, component class actual: %3, fault cause: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected differences in the actual and target topologies in relation to one component. There are differences in the electronic rating plate. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: aa = component number of the component, bb = component class of the target topology, cc = component class of the actual topology, dd = fault cause dd = 01 hex = 1 dec: Different component type. dd = 02 hex = 2 dec: Different Order No. dd = 03 hex = 3 dec: Different manufacturer. dd = 04 hex = 4 dec: Connection changed over for a multi-component slave (e.g. Double Motor Module), defective EEPROM data in the electronic rating plate, or only part of a multi-component slave set to "deactivate and not present". dd = 05 hex = 5 dec: A CX32 was replaced by an NX10 or NX15. dd = 06 hex = 6 dec: An NX10 or NX15 was replaced by a CX32. Note: Component class and component type are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - check the component soft-wired connections against the hardware configuration of the drive unit in the commissioning software and correct differences. - parameterize the topology comparison of all components (p9906). - parameterize the topology comparison of one components (p9907, p9908). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01421	Topology: Comparison different components
Message value:	Component number: %1, component class target: %2, component class actual: %3, fault cause: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected differences in the actual and target topologies in relation to one component. The component class, the component type or the number of connections differ. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: aa = component number of the component, bb = component class of the target topology, cc = component class of the actual topology, dd = fault cause dd = 01 hex = 1 dec: Different component class. dd = 02 hex = 2 dec: Different component type. dd = 03 hex = 3 dec: Different Order No. dd = 04 hex = 4 dec: Different number of connections. Note: Component class, component type and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Check the component soft-wired connections against the hardware configuration of the drive unit in the commissioning software and correct differences. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01425	Topology: Comparison serial number of a component is different
Message value:	Component number: %1, Component class: %2, Differences: %3
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected differences in the actual and target topologies in relation to one component. The serial number is different. Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: cc = number of differences bb = component class aa = component number of the component Note: The component class is described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - change over the actual topology to match the target topology. - download the target topology that matches the actual topology (commissioning software). Re byte cc: cc = 1 --> can be acknowledged using p9904 or p9905. cc > 1 --> can be acknowledged using p9905 and can be deactivated using p9906 or p9907/p9908. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison). See also: p9904 (Topology comparison, acknowledge differences), p9905 (Device specialization), p9906 (Topology comparison, comparison stage of all components), p9907 (Topology comparison, comparison stage of the component number), p9908 (Topology comparison, comparison stage of a component)

A01428	Topo: Comparison connection of a component is different
Message value:	Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected differences in the actual and target topologies in relation to one component. A component was connected to another connection. The different connections of a component are described in the alarm value: Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number of the target topology cc = connection number of the actual topology bb = component class aa = component number Note: Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - change over the actual topology to match the target topology. - download the target topology that matches the actual topology (commissioning software). - automatically remove the topology error (p9904). Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison). See also: p9904 (Topology comparison, acknowledge differences)
A01429	Topology: Comparison connection is different for more than one component
Message value:	Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	A topology comparison has found differences between the actual and target topology for several components. A component was connected to another connection. The different connections of a component are described in the alarm value: Alarm value (r2124, interpret hexadecimal): ddccbbaa hex: dd = connection number of the target topology cc = connection number of the actual topology bb = component class aa = component number Note: Component class and connection number are described in F01375. The drive system is no longer booted. In this state, the drive control (closed-loop) cannot be enabled.
Remedy:	Adapting the topologies: - change over the actual topology to match the target topology. - download the target topology that matches the actual topology (commissioning software). Note: In the software, a Double Motor Module behaves just like two separate DRIVE-CLiQ nodes. If a Double Motor Module is re-inserted, this can result in several differences in the actual topology. Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

F01451	Topology: Target topology is invalid
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	An error was detected in the target topology. The target topology is invalid. Fault value (r0949, interpret hexadecimal): ccccbbaa hex: cccc = index error, bb = component number, aa = fault cause aa = 1B hex = 27 dec: Error not specified. aa = 1C hex = 28 dec: Value illegal. aa = 1D hex = 29 dec: Incorrect ID. aa = 1E hex = 30 dec: Incorrect ID length. aa = 1F hex = 31 dec: Too few indices left. aa = 20 hex = 32 dec: component not connected to Control Unit.
Remedy:	Reload the target topology using the commissioning software.
F01470	Topology: Target topology ring-type connection detected
Message value:	Component number: %1, Component class: %2, Connection number: %3
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A ring-type connection was detected when writing to the target topology. Fault value (r0949, interpret hexadecimal): ddccbbaa hex: cc = connection number bb = component class aa = component number of a component included in the ring Note: Component class and connection number are described in F01375.
Remedy:	Read out the fault value and remove one of the specified connections. Then download the target topology again using the commissioning software. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
F01475	Topology: Target topology duplicate connection between two components
Message value:	Component number: %1, Component class: %2, Connection number1: %3, Connection number2: %4
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	When writing the target topology, a duplicate connection between two components was detected. Fault value (r0949, interpret hexadecimal): ddccbbaa hex: dd = connection number 2 of the duplicate connection cc = connection number 1 of the duplicate connection bb = component class aa = component number of one of the components connected twice Note: Component class and connection number are described in F01375.
Remedy:	Read out the fault value and remove one of the two specified connections. Then download the target topology again using the commissioning software. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01481	Topology: Comparison power unit missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a power unit in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- delete the drive belonging to the power unit in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check DRIVE-CLiQ cables for interruption and contact problems. - check the 24 V supply voltage. - check that the power unit is working properly. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01482	Topology: Comparison Sensor Module missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a Sensor Module in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- re-configure the drive belonging to the Sensor Module in the commissioning software project (encoder configuration) and download the new configuration to the drive unit. - delete the drive belonging to the Sensor Module in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check DRIVE-CLiQ cables for interruption and contact problems. - check the 24 V supply voltage. - check that the Sensor Module is working properly. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01483	Topology: Comparison Terminal Module missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a Terminal Module in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- delete the Terminal Module in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check DRIVE-CLiQ cables for interruption and contact problems. - check the 24 V supply voltage. - check that the Terminal Module is working properly. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01484	Topology: Comparison DRIVE-CLiQ Hub Module missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a DRIVE-CLiQ Hub Module in the target topology that does not exist in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- delete the DRIVE-CLiQ Hub Module in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check DRIVE-CLiQ cables for interruption and contact problems. - check the 24 V supply voltage. - test the DRIVE-CLiQ Hub Module to ensure that it functions properly. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01485	Topology: Comparison CX32 missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a controller extension 32 (CX32) in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- delete the CX32 / NX in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check DRIVE-CLiQ cables for interruption and contact problems. - check the 24 V supply voltage. - check that CX32/NX functions correctly. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01486	Topology: Comparison DRIVE-CLiQ components missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a DRIVE-CLiQ component in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- delete the drive belonging to this component in the commissioning software project and download the new configuration to the drive unit. - re-configure the drive belonging to this component in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check DRIVE-CLiQ cables for interruption and contact problems. - check the 24 V supply voltage. - check that the component is working properly. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

A01487	Topology: Comparison option slot components missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected an option slot module in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- delete the option board in the commissioning software project and download the new configuration to the drive unit. - re-configure the drive unit in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check that the option board is functioning correctly Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01488	Topology: Comparison EnDat encoder missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected an EnDat encoder in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- re-configure the drive belonging to the encoder in the commissioning software project (encoder configuration) and download the new configuration to the drive unit. - delete the drive belonging to the encoder in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).
A01489	Topology: Comparison motor with DRIVE-CLiQ missing in the actual topology
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The topology comparison has detected a motor with DRIVE-CLiQ in the target topology that is not available in the actual topology. Alarm value (r2124, interpret decimal): Component number of the additional target components.
Remedy:	- re-configure the drive belonging to this motor in the commissioning software project and download the new configuration to the drive unit. - re-configure the drive belonging to this motor in the commissioning software project and download the new configuration to the drive unit. - check that the actual topology matches the target topology and if required, change over. - check DRIVE-CLiQ cables for interruption and contact problems. - check that the motor is working properly. Note: Under "Topology --> Topology view" the commissioning software offers improved diagnostics capability (e.g. set-point/actual value comparison).

F01505 (A)	BICO: Interconnection cannot be established
Message value:	Parameter: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A PROFIdrive telegram has been set (p0922). An interconnection contained in the telegram was not able to be established. Fault value (r0949, interpret decimal): Parameter receiver that should be changed.
Remedy:	Establish another interconnection.
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F01506 (A)	BICO: No standard telegram
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM31, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The standard telegram in p0922 is not maintained and therefore p0922 is set to 999. Fault value (r0949, interpret decimal): BICO parameter for which the write attempt was unsuccessful.
Remedy:	Again set the required standard telegram (p0922).
Reaction upon A:	NONE
Acknowl. upon A:	NONE
A01507 (F, N)	BICO: Interconnections to inactive objects present
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	There are BICO interconnections as signal sink from a drive object that is either inactive/not operational. The BI/CI parameters involved are listed in r9498. The associated BO/CO parameters are listed in r9499. The list of the BICO interconnections to other drive objects is displayed in r9491 and r9492 of the deactivated drive object. Note: r9498 and r9499 are only written to, if p9495 is not set to 0. Alarm value (r2124, interpret decimal): Number of BICO interconnections found to inactive drive objects.
Remedy:	- set all open BICO interconnections centrally to the factory setting with p9495 = 2. - make the non-operational drive object active/operational again (re-insert or activate components).
Reaction upon F:	Infeed: OFF2 (NONE, OFF1) Servo: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2) Vector: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowl. upon F:	IMMEDIATELY
Reaction upon N:	NONE
Acknowl. upon N:	NONE

A01508	BICO: Interconnections to inactive objects exceeded
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The maximum number of BICO interconnections (signal sinks) when deactivating a drive object was exceeded. When deactivating a drive object, all BICO interconnections (signal sinks) are listed in the following parameters: - r9498[0...29]: List of the BI/CI parameters involved. - r9499[0...29]: List of the associated BO/CO parameters.
Remedy:	The alarm automatically disappears as soon as no BICO interconnection (value = 0) is entered in r9498[29] and r9499[29]. Notice: When reactivating the drive object, all BICO interconnections should be checked and if required, re-established.

F01510	BICO: Signal source is not float type
Message value:	Parameter: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The requested connector output does not have the correct data type. This interconnection is not established. Fault value (r0949, interpret decimal): Parameter number to which an interconnection should be made (connector output).
Remedy:	Interconnect this connector input with a connector output having a float data type.

F01511 (A)	BICO: Interconnection between different scalings
Message value:	Parameter: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The requested interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values. - the BICO output has different normalized units than the BICO input. - message only for interconnections within a drive object. Example: The BICO output has, as normalized unit, voltage and the BICO input has current. This means that the factor p2002 (contains the reference value for current) / p2001 (contains the reference value for voltage) is calculated between the BICO output and BICO input. Fault value (r0949, interpret decimal): Parameter number of the BICO input (signal sink).
Remedy:	No correction needed.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F01512	BICO: No scaling available
Message value:	%1
Drive object:	All objects
Reaction:	Infeed: OFF2 (OFF1) Servo: OFF2 Vector: OFF2
Acknowledge:	POWER ON
Cause:	An attempt was made to determine a conversion factor for a scaling that does not exist. Fault value (r0949, interpret decimal): Unit (e.g. corresponding to SPEED) for which an attempt was made to determine a factor.
Remedy:	Apply scaling or check the transfer value.

F01513 (A)	BICO: Spanning DO between different scalings
Message value:	Parameter: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The requested interconnection was established. However, a conversion is made between the BICO output and BICO input using the reference values. An interconnection is made between different drive objects and the BICO output has different normalized units than the BICO input or the normalized units are the same but the reference values are different. Example: The BICO output has, as standard unit, voltage and the BICO input has current; both lie in different drive objects. This means that the factor p2002 (contains the reference value for current) / p2001 (contains the reference value for voltage) is calculated between the BICO output and BICO input. Fault value (r0949, interpret decimal): Parameter number of the BICO input (signal sink).
Remedy:	None necessary.
Reaction upon A:	NONE
Acknowl. upon A:	NONE
A01514 (F)	BICO: Error when writing during a reconnect
Message value:	Parameter: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	During a reconnect operation (e.g. while booting or downloading - but can also occur in normal operation) a parameter was not able to be written to. Example: When writing to a double word BICO input in the second index, the memory areas overlap (e.g. p8861). The parameter is then reset to the factory setting. Alarm value (r2124, interpret decimal): Parameter number of the BICO input (signal sink).
Remedy:	None necessary.
Reaction upon F:	NONE
Acknowl. upon F:	IMMEDIATELY
F01515 (A)	BICO: Writing to parameter not permitted as the master control is active
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	While changing the number of CDS or when copying from CDS, the master control was active.
Remedy:	None necessary.
Reaction upon A:	NONE
Acknowl. upon A:	NONE
A01590 (F)	Drive: Motor maintenance interval expired
Message value:	Fault cause: %1 bin
Drive object:	A_INF, B_INF, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected service/maintenance interval for this motor was reached. Alarm value (r2124, interpret decimal): Motor data set number. See also: p0650 (Actual motor operating hours), p0651 (Motor operating hours maintenance interval)

Remedy: carry out service/maintenance and reset the service/maintenance interval (p0651).
Reaction upon F: NONE
Acknowledged upon F: IMMEDIATELY

F01600 SI CU: STOP A initiated

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected a fault and initiated a STOP A (pulse suppression via the safety shutdown path of the Control Unit).
- forced checking procedure of the safety shutdown path of the Control Unit unsuccessful.
- subsequent response to fault F01611 (defect in a monitoring channel).
Fault value (r0949, interpret decimal):
0: Stop request from the Motor Module.
1005: Pulses suppressed although STO not selected and there is no internal STOP A present.
1010: Pulses enabled although STO is selected or an internal STOP A is present.
1015: Feedback of the safe pulse suppression for Motor Modules connected in parallel are different.
9999: Subsequent response to fault F01611.
Remedy:
- select Safe Torque Off and deselect again.
- replace the Motor Module involved.
Re fault value = 9999:
- carry out diagnostics for fault F01611.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off / SH: Safe standstill

F01611 SI CU: Defect in a monitoring channel

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected a fault in the data cross-check between the CU and Motor Module (MM) and initiated a STOP F.
As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.
Fault value (r0949, interpret decimal):
0: Stop request from the Motor Module.
1 ... 999:
Number of the cross-checked data that resulted in this fault. This number is also displayed in r9795.
1: SI monitoring clock cycle (r9780, r9880).
2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.
3: SI SGE changeover tolerance time (p9650, p9850).
4: SI transition period STOP F to STOP A (p9658, p9858).
5: SI enable Safe Brake Control (p9602, p9802).
6: SI Motion enable, safety-relevant functions (p9501, internal value).
7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).
8: SI PROFIsafe address (p9610, p9810).
9: SI debounce time for STO/SBC/SS1 (MM) (p9651, p9851).
11: SI Safe Brake Adapter mode, BICO interconnection (p9621, p9821).
12: SI Safe Brake Adapter relay ON time (p9622[0], p9822[0]).
13: SI Safe Brake Adapter relay OFF time (p9622[1], p9822[1]).
1000: Watchdog timer has expired. Within the time of approx. 5 * p9650 too many switching operations have occurred at terminal EP of the Motor Module, or STO (also as subsequent response) was initiated too frequently via PROFIsafe/TM54F.
1001, 1002: Initialization error, change timer / check timer.

2000: Status of the STO selection on the Control Unit and Motor Module are different.
 2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.
 2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different.
 2004: Status of the STO selection for modules connected in parallel are different.
 2005: Feedback signal of the safe pulse suppression on the Control Unit and Motor Modules connected in parallel are different.
 6000 ... 6999:
 Error in the PROFIsafe control. The significance of the individual message values is described in safety message C01711 of the Control Unit.

Remedy:

Re fault value = 1 ... 5 and 7 ... 999:
 - check the cross-checked data that resulted in a STOP F.
 - carry out a POWER ON (power off/on) for all components.
 - upgrade the Motor Module software.
 - upgrade the Control Unit software.

Re fault value = 6:
 - carry out a POWER ON (power off/on) for all components.
 - upgrade the Motor Module software.
 - upgrade the Control Unit software.

Re fault value = 1000:
 - check the EP terminal at the Motor Module (contact problems).
 - PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller.
 - check the wiring of the fail-safe inputs at the TM54F (contact problems).

Re fault value = 1001, 1002:
 - carry out a POWER ON (power off/on) for all components.
 - upgrade the Motor Module software.
 - upgrade the Control Unit software.

Re fault value = 2000, 2001, 2002, 2004, 2005:
 - check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
 - check the wiring of the safety-relevant inputs (SGE) (contact problems).
 - check the causes of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
 - replace the Motor Module involved.

Re fault value = 6000 ... 6999:
 Refer to the description of the message values in safety message C01711.

Note:
 CU: Control Unit
 EP: Enable Pulses (pulse enable)
 MM: Motor Module
 SGE: Safety-relevant input
 SI: Safety Integrated
 SMM: Safe Motion Monitoring
 SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204)
 STO: Safe Torque Off / SH: Safe standstill

F01612 SI CU: STO inputs for power units connected in parallel different

Message value: Fault cause: %1 bin

Drive object: SERVO, VECTOR

Reaction: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function on the Control Unit (CU) has identified different states of the AND'ed STO inputs for power units connected in parallel and has initiated a STOP F.
 As a result of this fault, after the parameterized transition has expired (p9658), fault F01600 (SI CU: STOP A initiated) is output.
 Fault value (r0949, interpret binary):
 Binary image of the digital inputs of the Control Unit that are used as signal source for the function "Safe Torque Off".

Remedy:

- check the tolerance time SGE changeover and if required, increase the value (p9650).
 - check the wiring of the safety-relevant inputs (SGE) (contact problems).

Note:
 CU: Control Unit
 SGE: Safety-relevant input
 SI: Safety Integrated
 STO: Safe Torque Off / SH: Safe standstill

N01620 (F, A) SI CU: Safe Torque Off active

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE

F01625 SI CU: Sign-of-life error in safety data

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected an error in the sign-of-life of the safety data between the CU and Motor Module (MM) and initiated a STOP A.
- there is either a DRIVE-CLiQ communication error or communication has failed.
- a time slice overflow of the safety software has occurred.
Fault value (r0949, interpret decimal):
Only for internal Siemens troubleshooting.

- Remedy:**
- select Safe Torque Off and deselect again.
 - carry out a POWER ON (power off/on) for all components.
 - check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
 - deselect all drive functions that are not absolutely necessary.
 - reduce the number of drives.
 - check the electrical cabinet design and cable routing for EMC compliance

Note:

CU: Control Unit

MM: Motor Module

SI: Safety Integrated

F01630 SI CU: Brake control error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function in the Control Unit (CU) has detected a brake control error and initiated a STOP A.

Fault value (r0949, interpret decimal):

10, 11:

Fault in "open holding brake" operation.

- Parameter p1278 incorrectly set.

- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).

- Ground fault in brake cable.

20:

Fault in "brake open" state.

- Short-circuit in brake winding.

30, 31:

Fault in "close holding brake" operation.

- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).

- Short-circuit in brake winding.

40:

Fault in "brake closed" state.

50:

Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).

80:

SafeBrakeAdapter: Fault in the brake control circuit of the Control Unit or communication fault between Control Unit and Motor Module (brake control diagnostics).

Note:

The following causes may apply to fault values:

- motor cable is not shielded correctly.

- defect in control circuit of the Motor Module.

- Remedy:**
- check parameter p1278 (for SBC, only p1278 = 0 is permissible).
 - select Safe Torque Off and deselect again.
 - check the motor holding brake connection.
 - check the function of the motor holding brake.
 - check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
 - check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
 - replace the Motor Module involved.
- Operation with Safe Brake Module or Safe Brake Adapter:
- check the Safe Brake Module or Safe Brake Adapter connection.
 - replace the Safe Brake Module or Safe Brake Adapter.
- Note:**
CU: Control Unit
SBC: Safe Brake Control
SI: Safety Integrated

F01649 SI CU: Internal software error

- Message value:** %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An internal error in the Safety Integrated software on the Control Unit has occurred.
Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
- Remedy:**
- carry out a POWER ON (power off/on) for all components.
 - re-commission the "Safety Integrated" function and carry out a POWER ON.
 - upgrade the Control Unit software.
 - contact the Hotline.
 - replace the Control Unit.
- Note:**
CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01650 SI CU: Acceptance test required

- Message value:** %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The drive-based "Safety Integrated" function in the Control Unit requires an acceptance test.
Note:
This fault results in a STOP A that can be acknowledged.
Fault value (r0949, interpret decimal):
130: Safety parameters for the Motor Module not available.
1000: Reference and actual checksum on the Control Unit are not identical (booting).
- at least one checksum-checked piece of data is defective.
2000: Reference and actual checksum on the Control Unit are not identical (commissioning mode).
- reference checksum incorrectly entered into the Control Unit (p9799 not equal to r9798).
- when deactivating the safety functions, p9501 or p9503 are not deleted.
2001: Reference and actual checksum on the Motor Module are not identical (commissioning mode).
- reference checksum incorrectly entered into the Motor Module (p9899 not equal to r9898).
- when deactivating the safety functions, p9501 or p9503 are not deleted.
2002: Enable of safety-related functions between the Control Unit and Motor Module differ (p9601 not equal to p9801).
2003: Acceptance test is required as a safety parameter has been changed.
2004: An acceptance test is required because a project with enabled safety-functions has been downloaded.

2005: The Safety LogBook has identified that a functional safety checksum has changed. An acceptance test is required.
2010: Safe Brake Control is enabled differently between the Control Unit and Motor Module (p9602 not equal to p9802).
2020: Error when saving the safety parameters for the Motor Module.
3003: Acceptance test is required as a hardware-related safety parameter has been changed.
3005: The Safety LogBook has identified that a hardware-related safety checksum has changed. An acceptance test is required.
9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.

Remedy:

Re fault value = 130:
- carry out safety commissioning routine.
Re fault value = 1000:
- again carry out safety commissioning routine.
- replace the memory card or Control Unit.
Re fault value = 2000:
- check the safety parameters in the Control Unit and adapt the reference checksum (p9799).
Re fault value = 2001:
- check the safety parameters in the Motor Module and adapt the reference checksum (p9899).
Re fault value = 2002:
- enable the safety-related functions in the Control Unit and check in the Motor Module (p9601 = p9801).
Re fault value = 2003, 2004, 2005:
- Carry out an acceptance test and generate an acceptance report.
The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the documentation for SINAMICS Safety Integrated.
The fault with fault value 3005 can only be acknowledged when the "STO" function is deselected.
Re fault value = 2010:
- check enable of the safety-related brake control in the Control Unit and Motor Module (p9602 = p9802).
Re fault value = 2020:
- again carry out safety commissioning routine.
- replace the memory card or Control Unit.
Re fault value = 3003:
- carry out the function checks for the modified hardware and generate an acceptance report.
The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
SINAMICS S120 Function Manual Safety Integrated
Re fault value = 3005:
- carry out the function checks for the modified hardware and generate an acceptance report.
The fault with fault value 3005 can only be acknowledged when the "STO" function is deselected.
Re fault value = 9999:
- carry out diagnostics for the other safety-related fault that is present.
Note:
CU: Control Unit
MM: Motor Module
SI: Safety Integrated
STO: Safe Torque Off
See also: p9799 (SI reference checksum SI parameters (Control Unit)), p9899 (SI reference checksum SI parameters (Motor Module))

F01651	SI CU: Synchronization safety time slices unsuccessful
Message value:	%1
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The "Safety Integrated" function requires a synchronization of the safety time slices between the Control Unit (CU) and Motor Module (MM) and between the Control Unit and the higher-level control. This synchronization routine was unsuccessful. Note: This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret decimal): 150: Fault in the synchronization to the PROFIBUS master. All other values: Only for internal Siemens troubleshooting. See also: p9510 (SI Motion clock-cycle synchronous PROFIBUS master)
Remedy:	Re fault value = 150: - check the setting of p9510 (SI Motion clock-cycle synchronous PROFIBUS master) and if required, correct. General: - carry out a POWER ON (power off/on) for all components. - upgrade the Motor Module software. - upgrade the Control Unit software. - upgrade the software of the higher-level control. Note: CU: Control Unit MM: Motor Module SI: Safety Integrated
F01652	SI CU: Illegal monitoring clock cycle
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	One of the Safety Integrated monitoring clock cycles is not permissible: - the drive-based monitoring clock cycle cannot be maintained due to the communication conditions required in the system. - the monitoring clock cycle for safe motion monitoring functions with the higher-level control is not permissible (p9500). - The sampling time for the current controller (p0112, p0115) cannot be supported. Note: This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret decimal): - for enabled drive-based SI monitoring (p9601/p9801 > 0): Minimum setting for the monitoring clock cycle (in µs). - with the motion monitoring function enabled (p9501 > 0): 100: No matching monitoring clock cycle was able to be found. 101: The monitoring clock cycle is not an integer multiple of the actual value sensing clock cycle. 102: An error has occurred when transferring the DP clock cycle to the Motor Module (MM). 103: An error has occurred when transferring the DP clock cycle to the Sensor Module. 104,105: - four times the current controller sampling time is greater than 1 ms when operating with a non-isochronous PROFIBUS. - four times the current controller sampling time is greater than the DP clock cycle when operating with an isochronous PROFIBUS. - The DP clock cycle is not an integer multiple of the sampling time of the current controller. 106: The monitoring clock cycle does not match the monitoring clock cycle of the TM54F. 107: Four times the current controller sampling time is greater than the actual value sensing clock cycle (p9511) or the actual value sensing clock cycle is not an integer multiple of the current controller sampling time. 108: The parameterized actual value sensing clock cycle cannot be set on this component. 109: If the motion monitoring functions have been parameterized as encoderless (p9506), the actual value sensing clock cycle (p9511) and the current controller clock cycle must be identical. 110: The actual value sensing clock cycle (p9511) for safety with encoder (p9506 = 0) is less than 2 ms for this Control Unit (e.g. CU305).

Remedy:

For enabled drive-based SI monitoring (p9601/p9801 > 0):

- upgrade the Control Unit software.

For enabled motion monitoring function (p9501 > 0):

- correct the monitoring clock cycle (p9500) and carry out POWER ON.

Re fault value = 101:

- actual value sensing clock cycle corresponds to position control clock cycle/DP clock cycle (factory setting).
- for the drive-based motion monitoring functions (p9601/p9801bit 2 = 1) the actual value sensing clock cycle can be directly parameterized in P9511/p9311.

Re fault value = 104, 105:

- set a separate actual value sensing clock cycle in p9511.
- restrict operation to a maximum of two vector drives. For the standard setting in p0112, p0115, the current controller sampling time is automatically reduced to 250 µs. If the standard values were changed, then the current controller sampling time (p0112, p0115) should be appropriately set.
- increase the DP clock cycle for operation with a clock-cycle synchronous PROFIBUS so that there is a multiple clock cycle ratio of at least 4:1 between the DP clock cycle and the current controller sampling time. A clock cycle ratio of at least 8:1 is recommended.
- With firmware version 2.5, please ensure that parameter p9510 is set to 1 in the drive (clock cycle synchronous operation).

Re fault value = 106:

- set the parameters for the monitoring clock cycles the same (p10000 and p9500 / p9300).

Re fault value = 107:

- set an actual value sensing clock cycle in p9511 that matches the current controller clock cycle. A clock cycle ratio of at least 8:1 is recommended.

Re fault value = 108:

- set a suitable actual value sensing clock cycle in p9511.
- if the DP clock cycle is used as the actual value sensing clock cycle for operation with isochronous PROFIBUS (p9511 = 0), then a suitable DP clock cycle must be configured.

A suitable multiple of the DP clock cycle (e.g. 1, 2, 3, 4, 5, 6, 8, 10) must be parameterized on the D410. Otherwise, the clock cycle must be set to less than 8 ms.

Re fault value = 109:

- set the actual value sensing clock cycle in p9511 to the same value as the current controller clock cycle (p115).

Re fault value = 110:

- set the actual value sensing clock cycle in p9511 to 2 ms or higher.

Note:

CU: Control Unit
MM: Motor Module
SI: Safety Integrated

F01653	SI CU: PROFIBUS configuration error
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	There is a PROFIBUS configuration error for using Safety Integrated monitoring functions with a higher-level control (SINUMERIK or F-PLC).
	Note:
	For safety functions that have been enabled, this fault results in a STOP A that cannot be acknowledged.
	Fault value (r0949, interpret decimal):
	200: A safety slot for receive data from the control has not been configured.
	210, 220: The configured safety slot for the receive data from the control has an unknown format.
	230: The configured safety slot for the receive data from the F-PLC has the incorrect length.
	231: The configured safety slot for the receive data from the F-PLC has the incorrect length.
	240: The configured safety slot for the receive data from the SINUMERIK has the incorrect length.
	250: A PROFIsafe slot is configured in the higher-level F control, however PROFIsafe is not enabled in the drive.
	300: A safety slot for the send data to the control has not been configured.
	310, 320: The configured safety slot for the send data to the control has an unknown format.
	330: The configured safety slot for the send data to the F-PLC has the incorrect length.
	331: The configured safety slot for the send data to the F-PLC has the incorrect length.
	340: The configured safety slot for the send data to the SINUMERIK has the incorrect length.

Remedy:

- The following generally applies:
 - check and, if necessary, correct the PROFIBUS configuration of the safety slot on the master side.
 - upgrade the Control Unit software.
- Re fault value = 250:
 - remove the PROFIsafe configuring in the higher-level F control or enable PROFIsafe in the drive.
- Re fault value = 231, 331:
 - configure the PROFIsafe telegram matching the parameterization in the F-PLC.

The following applies for p9501.30 = 1 (FDI via PROFIsafe is enabled): PROFIsafe telegram 900 must be configured.
 The following applies for p9501.30 = 0 (FDI via PROFIsafe not enabled): PROFIsafe telegram 30 must be configured.

F01655 SI CU: Align monitoring functions

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: An error has occurred when aligning the Safety Integrated monitoring functions on the Control Unit (CU) and Motor Module (MM). Control Unit and Motor Module were not able to determine a common set of supported SI monitoring functions.

- there is either a DRIVE-CLiQ communication error or communication has failed.
- Safety Integrated software releases on the Control Unit and Motor Module are not compatible with one another.

Note:
 This fault results in a STOP A that cannot be acknowledged.
 Fault value (r0949, interpret hexadecimal):
 Only for internal Siemens troubleshooting.

Remedy:

- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.
- check the electrical cabinet design and cable routing for EMC compliance

Note:
 CU: Control Unit
 MM: Motor Module
 SI: Safety Integrated

F01656 SI CU: Motor Module parameter error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: When accessing the Safety Integrated parameters for the Motor Module (MM) in the non-volatile memory, an error has occurred.

Note:
 This fault results in a STOP A that can be acknowledged.
 Fault value (r0949, interpret decimal):
 129: Safety parameters for the Motor Module corrupted.
 131: Internal Motor Module software error.
 132: Communication errors when uploading or downloading the safety parameters for the Motor Module.
 255: Internal software error on the Control Unit.

Remedy:

- re-commission the safety functions.
- upgrade the Control Unit software.
- upgrade the Motor Module software.
- replace the memory card or Control Unit.

Re fault value = 132:

- check the electrical cabinet design and cable routing for EMC compliance

Note:
 CU: Control Unit
 MM: Motor Module
 SI: Safety Integrated

F01659	SI CU: Write request for parameter rejected
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The write request for one or several Safety Integrated parameters on the Control Unit (CU) was rejected. Note: This fault does not result in a safety stop response. Fault value (r0949, interpret decimal): 1: The Safety Integrated password is not set. 2: A reset of the drive parameters was selected. However, the Safety Integrated parameters were not reset, as Safety Integrated is presently enabled. 3: The interconnected STO input is in the simulation mode. 10: An attempt was made to enable the STO function although this cannot be supported. 11: An attempt was made to enable the SBC function although this cannot be supported. 12: An attempt was made to enable the SBC function although this cannot be supported for a parallel circuit configuration. 13: An attempt was made to enable the SS1 function although this cannot be supported. 14: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different. 15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported. 16: An attempt was made to enable the STO function although this cannot be supported when the internal voltage protection (p1231) is enabled. 17: An attempt was made to enable the PROFIsafe function although this cannot be supported for a parallel circuit configuration. 18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported. 19: An attempt was made to enable the SBA (Safe Brake Adapter), although this cannot be supported. See also: p0970, p3900, r9771, r9871
Remedy:	Re fault value = 1: - set the Safety Integrated password (p9761). Re fault value = 2: - Inhibit Safety Integrated (p9501, p9601) or reset safety parameters (p0970 = 5), then reset the drive parameters again. Re fault value = 3: - end the simulation mode for the digital input (p0795). Re fault value = 10, 11, 12, 13, 14, 15, 17, 18, 19: - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved. - use a Motor Module that supports the required function ("Safe Torque Off", "Safe Brake Control", "PROFIsafe/PROFIsafe V2", "motion monitoring functions integrated in the drive"). - upgrade the Motor Module software. - upgrade the Control Unit software. Re fault value = 16: - inhibit the internal voltage protection (p1231). Note: CU: Control Unit MM: Motor Module SBC: Safe Brake Control SI: Safety Integrated SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204) STO: Safe Torque Off / SH: Safe standstill SBA: Safe Brake Adapter See also: p9501 (SI Motion enable safety functions (Control Unit)), p9601 (SI enable, functions integrated in the drive (Control Unit)), p9620 (SI signal source for STO (SH)/SBC/SS1 (Control Unit)), p9761 (SI password input), p9801 (SI enable, functions integrated in the drive (Motor Module))

F01660	SI CU: Safety-related functions not supported
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The Motor Module (MM) does not support the safety-related functions (e.g. the Motor Module version is not the correct one). Safety Integrated cannot be commissioned. Note: This fault does not result in a safety stop response.
Remedy:	- use a Motor Module that supports the safety-related functions. - upgrade the Motor Module software. Note: CU: Control Unit MM: Motor Module SI: Safety Integrated

F01663	SI CU: Copying the SI parameters rejected
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	One of the following values is saved in p9700 or was entered offline: 87 or 208. This is the reason that when booting, an attempt is made to copy SI parameters from the Control Unit to the Motor Module. However, no safety-relevant function has been selected on the Control Unit (p9501 = 0, p9601 = 0). This is the reason that copying is not possible. Note: This fault does not result in a safety stop response. See also: p9700 (SI Motion copy function)
Remedy:	- Set p9700 to 0. - Check p9501 and p9601 and if required, correct. - Restart the copying function by entering the corresponding value into p9700.

F01664	SI CU: No automatic firmware update
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	During booting, the system detected that the "Firmware update automatic" function (p7826 = 1) was not activated. This function must be activated for automatic firmware updates/downgrades to prevent impermissible version combinations when safety functions are enabled. Note: This fault does not result in a safety stop response. See also: p7826 (Firmware update automatic)
Remedy:	For enabled drive-based SI monitoring: 1. Activate the "Firmware update automatic" function (p7826 = 1). 2. Save the parameters (p0977 = 1) and carry out a POWER ON. When deactivating drive-based SI monitoring (p9601 = 0), the fault can be acknowledged after exiting the safety commissioning mode.

F01665	SI CU: System is defective
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Before the drive booted the last time, it detected a defect in the system and carried out an emergency stop. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.

Remedy:

- carry out a POWER ON (power off/on).
- upgrade firmware to later version.
- contact the Hotline.

A01666 (F) SI Motion CU: Steady-state (static) 1 signal at the F-DI for safety-relevant acknowledgement

Message value: -

Drive object: SERVO

Reaction: NONE

Acknowledge: NONE

Cause: A logical 1 signal is present at the F-DI configured in p10006 for more than 10 seconds. A logical 0 signal must be present statically (steady-state) at the F-DI. This avoids unintentional safety-relevant acknowledgement (or the "Internal Event Acknowledge" signal) if a wire breaks or one of the two digital inputs bounces.

Remedy: Set F-DI (see p10006) to logical 0 signal.

Reaction upon F: NONE

Acknowled. upon F: IMMEDIATELY

F01670 SI Motion: Invalid parameterization Sensor Module

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The parameterization of a Sensor Module used for Safety Integrated is not permissible.

Note:
This fault results in a STOP A that cannot be acknowledged.
Fault value (r0949, interpret decimal):

- 1: No encoder was parameterized for Safety Integrated.
- 2: An encoder was parameterized for Safety Integrated that does not have an A/B track (sine/cosine).
- 3: The encoder data set selected for Safety Integrated is still not valid.
- 4: A communication error with the encoder has occurred.
- 10: For an encoder used for Safety Integrated, not all of the Drive Data Sets (DDS) are assigned to the same Encoder Data Set (EDS) (p0187 ... p0189).

Remedy:

Re fault value = 1, 2:
- use and parameterize an encoder that Safety Integrated supports (encoder with track A/B sine-wave, p0404.4 = 1).

Re fault value = 3:
- check whether the drive or drive commissioning function is active and if required, exit this (p0009 = p00010 = 0), save the parameters (p0971 = 1) and carry out a POWER ON

Re fault value = 4:
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Sensor Module involved and if required, carry out a diagnostics routine for the faults identified.

Re fault value = 10:
- align the EDS assignment of all of the encoders used for Safety Integrated (p0187 ... p0189).

Note:
SI: Safety Integrated

F01671 SI Motion: Parameterization encoder error

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The parameterization of the encoder used by Safety Integrated is different to the parameterization of the standard encoder.

Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number of the non-corresponding safety parameter.

Remedy: Align the encoder parameterization between the safety encoder and the standard encoder.

Note:
SI: Safety Integrated

F01672	SI CU: Motor Module software/hardware incompatible
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The existing Motor Module software does not support safe motion monitoring or is not compatible to the software on the Control Unit or there is a communications error between the Control Unit and Motor Module. Note: This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret decimal): 1: The existing Motor Module software does not support the safe motion monitoring function. 2, 3, 6, 8: There is a communications error between the Control Unit and Motor Module. 4, 5, 7: The existing Motor Module software is not compatible to the software on the Control Unit. 9: The current Motor Module software does not support safe encoderless motion monitoring.
Remedy:	- check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out the appropriate diagnostics routine for the particular faults. Re fault value = 1: - use a Motor Module that supports safe motion monitoring Re fault value = 2, 3, 6, 8: - check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified. Re fault value = 4, 5, 7: - upgrade the Motor Module software. Re fault value = 9: - upgrade the Motor Module firmware. Note: SI: Safety Integrated

F01673	SI Motion: Sensor Module software/hardware incompatible
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The existing Sensor Module software and/or hardware does not support the safe motion monitoring function with the higher-level control. Note: This fault does not result in a safety stop response. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- upgrade the Sensor Module software. - use a Sensor Module that supports the safe motion monitoring function. Note: SI: Safety Integrated

F01680	SI Motion CU: Checksum error safety monitoring functions
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The actual checksum calculated by the drive and entered in r9728 via the safety-relevant parameters does not match the reference checksum saved in p9729 at the last machine acceptance. Safety-relevant parameters have been changed or a fault is present. Note: This fault results in a STOP A that can be acknowledged. Fault value (r0949, interpret decimal): 0: Checksum error for SI parameters for motion monitoring. 1: Checksum error for SI parameters for actual values. 2: Checksum error for SI parameters for component assignment.

Remedy:

- check the safety-relevant parameters and if required, correct.
- perform a POWER ON if safety parameters requiring a POWER ON have been modified.
- carry out an acceptance test.

Note:
SI: Safety Integrated

F01681 SI Motion CU: Incorrect parameter value

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The parameter cannot be parameterized with this value.
 Note:
 This fault does not result in a safety stop response.
 Fault value (r0949, interpret decimal):
 Parameter number with the incorrect value.
 The gearbox stage has been set to an excessively high value for the parameter 9522 fault value.

Remedy: Correct the parameter value.
 With hysteresis/filtering enabled (p9501.16=1), the following applies:
 Set parameters p9546/9346 and p9547/9347 acc. to the following rule: p9546 >= 2 * p9547; 9346 >= 2 * p9347.
 The following rule must also be adhered to when actual value synchronization (p9501.3 = 1) is enabled: p9549 <= p9547; p9349 <= p9347.
 Correct the parameter 9522 fault value.
 Also check p9516.0 for fault value 9517.

F01682 SI Motion CU: Monitoring function not supported

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The monitoring function enabled in p9501, p9601 or p9801 is not supported in this firmware version.
 Note:
 This fault results in a STOP A that cannot be acknowledged.
 Fault value (r0949, interpret decimal):
 Monitoring function SLP not supported (p9501.1).
 2: Monitoring function SCA not supported (p9501.7 and p9501.8 ... 15 and p9503).
 3: Monitoring function SLS override not supported (p9501.5).
 4: Monitoring function external ESR activation not supported (p9501.4).
 5: Monitoring function FDI in PROFIsafe not supported (p9501.30).
 6: Enable actual value synchronization not supported (p9501.3).
 9: Monitoring function not supported, enable bit reserved (p9501.2, p9501.17 ... 29, p9501.31, if required p9501.6).
 10: Monitoring functions only supported for a SERVO drive object.
 11: Only drive-based encoderless monitoring functions are supported.
 12: Monitoring functions for ncSI are not supported on a CU305.
 20: Drive-based motion monitoring functions are only supported in conjunction with PROFIsafe (p9501 and p9601.1 ... 2 and p9801.1 ... 2).
 21: PROFIsafe only supported in conjunction with motion monitoring functions in the drive (p9501 and p9601.1 ... 2 and p9801.1 ... 2).

Remedy: Deselect the monitoring function involved (p9501, p9503, p9506, p9601, p9801).
 Note:
 SCA: Safe Cam / SN: Safe software cam
 SI: Safety Integrated
 SLP: Safely-Limited Position / SE: Safe software limit switches
 SLS: Safely-Limited Speed / SG: Safely reduced speed
 See also: p9501 (SI Motion enable safety functions (Control Unit)), p9503 (SI Motion SCA (SN) enable (Control Unit))

F01683 SI Motion CU: SOS/SLS enable missing

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The safety-relevant basic function "SOS/SLS" is not enabled in p9501 although other safety-relevant monitoring functions are enabled.
Note:
This fault does not result in a safety stop response.
Remedy: Enable the function "SOS/SLS" (p9501.0) and carry out a POWER ON.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9501 (SI Motion enable safety functions (Control Unit))

F01684 SI Motion: Safely limited position limit values interchanged

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: For the function "Safely-Limited Position" (SE), a lower value is in p9534 than in p9535.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
1: Limit values SLP1 interchanged.
2: Limit values SLP2 interchanged.
Remedy: Correct the limit values in p9534 and p9535 and carry out a POWER ON.
Note:
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches

F01685 SI Motion CU: Safely-limited speed limit value too high

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The limit value for the function "Safely-Limited Speed" (SLS) is greater than the speed that corresponds to an encoder limit frequency of 500 kHz.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Maximum permissible speed.
Remedy: Correct the limit values for SLS and carry out a POWER ON.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9531 (SI Motion SLS (SG) limit values (Control Unit))

F01686	SI Motion: Illegal parameterization cam position
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	At least one enabled "Safety Cam" (SCA) is parameterized in p9536 or p9537 too close to the tolerance range around the modulo position. The following conditions must be complied with to assign cams to a cam track: - the cam length of cam x = p9536[x]-p9537[x] must be greater or equal to the cam tolerance + the position tolerance (= p9540 + p9542). This also means that for cams on a cam track, the minus position value must be less than the plus position value. - the distance between 2 cams x and y (minus position value[y] - plus position value[x] = p9537[y] - p9536[x]) on a cam track must be greater than or equal to the cam tolerance + position tolerance (= p9540 + p9542). Note: This fault does not result in a safety stop response. Fault value (r0949, interpret decimal): Number of the "Safe Cam" with an illegal position. See also: p9501 (SI Motion enable safety functions (Control Unit))
Remedy:	Correct the cam position and carry out a POWER ON. Note: SCA: Safe Cam / SN: Safe software cam SI: Safety Integrated See also: p9536 (SI Motion SCA (SN) plus cam position (Control Unit)), p9537 (SI Motion SCA (SN) plus cam position (Control Unit))
F01687	SI Motion: Illegal parameterization modulo value SCA (SN)
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The parameterized modulo value for the "Safe Cam" (SCA) function is not a multiple of 360 000 mDegrees. Note: This fault does not result in a safety stop response.
Remedy:	Correct the modulo value for SCA and carry out a POWER ON. Note: SCA: Safe Cam / SN: Safe software cam SI: Safety Integrated See also: p9505 (SI Motion SCA (SN) modulo value (Control Unit))
F01688	SI Motion CU: Actual value synchronization not permissible
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	- It is not permissible to enable actual value synchronization for a 1-encoder system. - It is not permissible to simultaneously enable actual value synchronization and a monitoring function with absolute reference (SCA/SLP). Note: This fault results in a STOP A that cannot be acknowledged.
Remedy:	- Either select the "actual value synchronization" function or parameterize a 2-encoder system. - Either deselect the function "actual value synchronization" or the monitoring functions with absolute reference (SCA/SLP) and carry out a POWER ON. Note: SCA: Safe Cam / SN: Safe software cam SI: Safety Integrated SLP: Safely-Limited Position / SE: Safe software limit switches See also: p9501 (SI Motion enable safety functions (Control Unit)), p9526 (SI Motion encoder assignment second channel)

C01689 SI Motion: Axis re-configured

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: POWER ON
Cause: The axis configuration was changed (e.g. changeover between linear axis and rotary axis).
Parameter p0108.13 is internally set to the correct value.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number of parameter that initiated the change.
See also: p9502 (SI Motion axis type (Control Unit))
Remedy: The following should be carried out after the changeover:
- exit the safety commissioning mode (p0010).
- save all parameters (p0977 = 1 or "copy RAM to ROM").
- carry out a POWER ON.
Once the Control Unit has been switched on, safety message F01680 or F30680 indicates that the checksums in r9398[0] and r9728[0] have changed in the drive. The following must, therefore, be carried out:
- activate safety commissioning mode again.
- complete safety commissioning of the drive.
- exit the safety commissioning mode (p0010).
- save all parameters (p0977 = 1 or "copy RAM to ROM").
- carry out a POWER ON.
Note:
For the commissioning software, the units are only consistently displayed after a project upload.

F01690 SI Motion: Data save problem for the NVRAM

Message value: %1
Drive object: All objects
Reaction: Infeed: NONE (OFF1, OFF2)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: POWER ON
Cause: There is not sufficient memory space in the NVRAM on the drive to save parameters r9781 and r9782 (safety log-book).
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
0: There is no physical NVRAM available in the drive.
1: There is no longer any free memory space in the NVRAM.
Remedy: Re fault value = 0:
- use a Control Unit NVRAM.
Re fault value = 1:
- deselect functions that are not required and that take up memory space in the NVRAM.
- contact the Hotline.

A01691 (F) SI Motion: Ti and To unsuitable for DP cycle

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The configured times for PROFIBUS communication are not permitted and the DP cycle is used as the actual value acquisition cycle for the safe movement monitoring functions:
Isochronous PROFIBUS: the total of Ti and To is too high for the set DP cycle. The DP cycle should be at least 1 current controller cycle greater than the sum of Ti and To.
Non-isochronous PROFIBUS: the DP cycle must be at least 4 x current controller cycle.

Remedy: Configure Ti and To low so that they are suitable for the DP cycle or increase the DP cycle time.
Alternative when drive-based SI monitoring is enabled (p9601/p9801 > 0):
Use the actual value acquisition cycle p9511/p9311 and, in turn, set independently from DP cycle. The actual value sensing clock cycle must be at least four times the current controller clock cycle. A clock cycle ratio of at least 8:1 is recommended.
See also: p9511 (SI Motion actual value sensing cycle clock (Control Unit))

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F01692 SI Motion CU: Parameter value not permitted for encoderless

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The parameter cannot be set to this value if encoderless motion monitoring functions have been selected in p9506.
Note:
This fault does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Parameter number with the incorrect value.
See also: p9501 (SI Motion enable safety functions (Control Unit))

Remedy:
- Correct the parameter specified in the fault value.
- If necessary, deselect encoderless motion monitoring functions (p9506).
See also: p9501 (SI Motion enable safety functions (Control Unit))

A01693 (F) SI Motion CU: Safety parameter setting changed, wam restart/POWER ON required

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Safety parameters have been changed; these will only take effect following a warm restart or POWER ON.
Alarm value (r2124, interpret decimal):
Parameter number of the safety parameter which has changed, necessitating a warm restart or POWER ON.

Remedy:
- carry out a warm restart (p0971 = 3)
- carry out a POWER ON (power off/on) for all components.

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: POWER ON

A01696 (F) SI Motion: Testing of the motion monitoring functions selected when booting

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The test of the motion monitoring functions was already illegally active when booting.
This is the reason that the test is only carried out again after selecting the forced checking procedure parameterized in p9705.
Note:
This message does not result in a safety stop response.
See also: p9705 (SI Motion: Test stop signal source)

Remedy: Deselect the forced checking procedure of the safety motion monitoring functions and then select again.
The signal source for initiation is parameterized in binector input p9705.
Notice:
It is not permissible to use TM54F inputs to start the test stop.
Note:
SI: Safety Integrated
See also: p9705 (SI Motion: Test stop signal source)

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A01697 (F) SI Motion: Motion monitoring functions must be tested

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The time set in p9559 for the forced checking procedure of the safety motion monitoring functions has been exceeded. A new test is required.
After next selecting the forced checking procedure parameterized in p9705, the message is withdrawn and the monitoring time is reset.
Note:
This message does not result in a safety stop response.
As the shutdown paths are not automatically checked during booting, an alarm is always issued once booting is complete.
See also: p9559 (SI Motion forced checking procedure timer (Control Unit)), p9705 (SI Motion: Test stop signal source)

Remedy: Carry out the forced checking procedure of the safety motion monitoring functions.
The signal source for initiation is parameterized in binector input p9705.
Notice:
It is not permissible to use TM54F inputs to start the test stop.
Note:
SI: Safety Integrated
See also: p9705 (SI Motion: Test stop signal source)

Reaction upon F: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

A01698 (F) SI CU: Commissioning mode active

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The commissioning of the "Safety Integrated" function is selected.
This message is withdrawn after the safety functions have been commissioned.
Note:
This message does not result in a safety stop response.
See also: p0010

Remedy: None necessary.
Note:
CU: Control Unit
SI: Safety Integrated

Reaction upon F: Infeed: NONE (OFF1, OFF2)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A01699 (F)	SI CU: Shutdown path must be tested
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The time set in p9659 for the forced checking procedure of the safety shutdown paths has been exceeded. The safety shutdown paths must be re-tested. After the next time the "STO" function is deselected, the message is withdrawn and the monitoring time is reset. Note: This message does not result in a safety stop response. See also: p9659 (SI forced checking procedure timer)
Remedy:	Select STO and then deselect again. Note: CU: Control Unit SI: Safety Integrated STO: Safe Torque Off / SH: Safe standstill
Reaction upon F:	NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
C01700	SI Motion CU: STOP A initiated
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive is stopped via a STOP A (pulses are suppressed via the safety shutdown path of the Control Unit). Possible causes: - stop request from the second monitoring channel - pulses not suppressed after a parameterized time (p9557) after test stop selection. - subsequent response to the message C01706 "SI Motion CU: Safe Acceleration Monitoring limit exceeded". - subsequent response to the message C01714 "SI Motion CU: Safely-Limited Speed exceeded". - subsequent response to the message C01701 "SI Motion CU: STOP B initiated".
Remedy:	- remove the cause of the fault on the second monitoring channel - carry out a diagnostics routine for message C01706. - carry out a diagnostics routine for message C01714. - carry out a diagnostics routine for message C01701. - check the value in p9557 (where available), increase the value if necessary, and carry out a POWER ON - check the shutdown path of the Control Unit (check DRIVE-CLiQ communication if it has been implemented) - replace the Motor Module/Power Module - replace Control Unit. This message can be acknowledged without a POWER ON as follows: - motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe - motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only Note: SI: Safety Integrated
C01701	SI Motion CU: STOP B initiated
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF3
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive is stopped via a STOP B (braking along the OFF3 deceleration ramp). As a result of this fault, after the time parameterized in p9556 has expired, or the speed threshold parameterized in p9560 has been undershot, message C01700 "STOP A initiated" is output. Possible causes: - stop request from the second monitoring channel - subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded". - subsequent response to the message C01711 "SI Motion: Defect in a monitoring channel".

Remedy:

- remove the cause of the fault on the second monitoring channel
- carry out a diagnostics routine for message C01714.
- carry out a diagnostics routine for message C01711.

This message can be acknowledged without a POWER ON as follows:

- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only

Note:

SI: Safety Integrated

C01706 SI Motion CU: SBR limit undershot

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: Motion monitoring functions with encoder: SBR - Safe Acceleration Monitoring. After initiating STOP B (SS1) or STOP C (SS2), the speed has exceeded the selected tolerance.
Encoderless motion monitoring function: SBR - Safe Brake Ramp Monitoring. After initiating STOP B (SS1) or SLS changeover to the lower speed stage, the speed has exceeded the selected tolerance.
The drive is shut down by the message C01700 "SI Motion: STOP A initiated".

Remedy: Check the braking behavior and, if necessary, adapt the tolerance for the "Safe Acceleration Monitor" or modify the parameter settings for the "safe brake ramp".
This message can be acknowledged without a POWER ON as follows:

- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only

Note:

SI: Safety Integrated

See also: p9548 (SI Motion SBR actual velocity tolerance (Control Unit)), p9581 (SI Motion brake ramp reference value (Control Unit)), p9582 (SI Motion brake ramp delay time (Control Unit)), p9583 (SI Motion brake ramp monitoring time (Control Unit))

C01707 SI Motion CU: Tolerance for safe operating stop exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The actual position has distanced itself further from the target position than the standstill tolerance.
The drive is shut down by the message C01701 "SI Motion: STOP B initiated".

Remedy:

- check whether safety faults are present and if required carry out the appropriate diagnostic routines for the particular faults.
- check whether the standstill tolerance matches the accuracy and control dynamic performance of the axis.
- carry out a POWER ON.

This message can be acknowledged without a POWER ON as follows:

- motion monitoring functions integrated in the drive: via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: via the machine control panel in acceptance test mode only

Note:

SI: Safety Integrated

SOS: Safe Operating Stop / SBH: Safe operating stop

See also: p9530 (SI Motion standstill tolerance (Control Unit))

C01708 SI Motion CU: STOP C initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: STOP2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP C (braking along the OFF3 deceleration ramp).
 "Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
 Possible causes:
 - stop request from the higher-level control.
 - subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded".
 - subsequent response to the message C01715 "SI Motion: Safe end stop exceeded".
 See also: p9552 (SI Motion transition time STOP C to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
 - carry out a diagnostics routine for message C01714.
 This message can be acknowledged as follows:
 - motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
 - motion monitoring functions with SINUMERIK: Via the machine control panel
 Note:
 SI: Safety Integrated
 SOS: Safe Operating Stop / SBH: Safe operating stop

C01709 SI Motion CU: STOP D initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP D (braking along the path).
 "Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
 Possible causes:
 - stop request from the higher-level control.
 - subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded".
 - subsequent response to the message C01715 "SI Motion: Safe end stop exceeded".
 See also: p9553 (SI Motion transition time STOP D to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
 - carry out a diagnostics routine for message C01714.
 This message can be acknowledged as follows:
 - motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
 - motion monitoring functions with SINUMERIK: Via the machine control panel
 Note:
 SI: Safety Integrated
 SOS: Safe Operating Stop / SBH: Safe operating stop

C01710 SI Motion CU: STOP E initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP E (retraction motion).
 "Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
 Possible causes:
 - stop request from the higher-level control.
 - subsequent response to the message C01714 "SI Motion: Safely reduced speed exceeded".
 - subsequent response to the message C01715 "SI Motion: Safe end stop exceeded".
 See also: p9554 (SI Motion transition time STOP E to SOS (SBH) (Control Unit))

Remedy:

- remove the cause of the fault at the control.
- carry out a diagnostics routine for message C01714.

This message can be acknowledged as follows:

- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

Note:

SI: Safety Integrated
 SOS: Safe Operating Stop / SBH: Safe operating stop

C01711 SI Motion CU: Defect in a monitoring channel

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: When cross-checking and comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.

If at least one monitoring function is active, then after the parameterized timer has expired, the message C01701 "SI Motion: STOP B initiated" is output.

The message value that resulted in a STOP F is displayed in r9725. The described message values involve the data cross-check between the Control Unit and Motor Module. If the drive is operated together with a SINUMERIK, the message values are described in message 27001 of SINUMERIK.

The following message values may also occur in the following cases if the cause that is explicitly mentioned does not apply:

- cycle times not set uniformly (p9500/p9300 and p9511/p9311)
- differently parameterized axis types (p9502/p9302).
- excessively fast cycle times (p9500/p9300, p9511/p9311).
- for message values 3, 44 ... 57, 232, and encoder systems, differently parameterized encoder values (p9516/p9316, p9517/p9317, p9518/p9318, p9520/p9320, p9521/p9321, p9522/p9322, p9526/p9326).
- incorrect synchronization.

Message value (r9749, interpret decimal):

0 to 999: Number of the cross-checked data that resulted in this fault.

Message values that are not subsequently listed are only for internal Siemens troubleshooting.

0: Stop request from the other monitoring channel.

1: Status image of monitoring functions SOS, SLS or SLP (result list 1) (r9710[0], r9710[1]).

2: Status image of monitoring function SCA or n < nx (result list 2) (r9711[0], r9711[1]).

3: The position actual value differential (r9713) between the two monitoring channels is greater than the tolerance in p9542/p9342. When actual value synchronization is enabled (p9501.3/p9301.3), the velocity differential (based on the position actual value) is greater than the tolerance in p9549/p9349.

4: Error when synchronizing the crosswise data comparison between the two channels.

5: Function enable signals (p9501/p9301)

6: Limit value for SLS1 (p9531[0]/p9331[0])

7: Limit value for SLS2 (p9531[1]/p9331[1])

8: Limit value for SLS3 (p9531[2]/p9331[2])

9: Limit value for SLS4 (p9531[3]/p9331[3])

10: Standstill tol. (p9530/p9330)

31: Position tolerance (p9542/p9342) or (p9549/p9349) when actual value synchronization is enabled (p9501.3/p9301.3)

33: Time, velocity changeover (p9551/p9351)

35: Delay time, pulse canc. (p9556/p9356)

36: Checking time, pulse canc. (p9557/p9357)

37: Trans. time, STOP C to SOS (p9552/p9352)

38: Trans. time STOP D to SOS (p9553/p9353)

40: Stop response for SLS (p9561/p9361)

42: Shutdown speed, pulse canc. (p9560/p9360)

43: Memory test, stop response (STOP A).

44 ... 57: General

Possible cause 1 (during commissioning or parameter modification)

The tolerance value for the monitoring function is not the same on the two monitoring channels.

Possible cause 2 (during active operation)

The limit values are based on the current actual value (r9713). If the safe actual values on the two monitoring channels do not match, the limit values, which have been set at a defined interval, will also be different (i.e. corresponding to fault value 3). This can be ascertained by checking the safe actual positions.

44: Position actual value (r9713) + limit value for SLS1 (p9531[0]/p9331[0])

45: Position actual value (r9713) - limit value for SLS1 (p9531[0]/p9331[0])

46: Position actual value (r9713) + limit value for SLS2 (p9531[1]/p9331[1])

47: Position actual value (r9713) - limit value for SLS2 (p9531[1]/p9331[1])

48: Position actual value (r9713) + limit value for SLS3 (p9531[2]/p9331[2])

49: Position actual value (r9713) - limit value for SLS3 (p9531[2]/p9331[2])

50: Position actual value (r9713) + limit value for SLS4 (p9531[3]/p9331[3])

51: Position actual value (r9713) - limit value for SLS4 (p9531[3]/p9331[3])

52: Standstill position + tolerance (p9530/9330)

53: Standstill position - tolerance (p9530/9330)

54: Position actual value (r9713) + limit value nx (p9546/p9346) + tolerance (p9542/p9342)

55: Position actual value (r9713) + limit value nx (p9546/p9346)

56: Position actual value (r9713) - limit value nx (p9546/p9346)

57: Position actual value (r9713) - limit value nx (p9546/p9346) - tolerance (p9542/p9342)

58: Actual stop request.

75: Velocity limit nx (p9546, p9346).

76: Stop response for SLS1 (p9563[0]/p9363[0])

77: Stop response for SLS2 (p9563[1]/p9363[1])

78: Stop response for SLS3 (p9563[2]/p9363[2])

79: Stop response for SLS4 (p9563[3]/p9363[3])

81: Velocity tolerance for SBR (p9548/p9348)

82: SGEs for SLS correction factor.

83: Acceptance test timer (p9558/p9358)

84: Trans. time STOP F (p9555/p9355)

85: Trans. time bus failure (p9580/p9380)

86: ID 1-encoder system (p9526/p9326).

87: Encoder assignment, 2nd channel (p9526/p9326)

89: Encoder limit freq.

230: Filter time constant for n < nx.

231: Hysteresis tolerance for n < nx.

232: Smoothed velocity actual value.

233: Smoothed velocity actual value + limit value nx / safety monitoring clock cycle + hysteresis tolerance.

234: Smoothed velocity actual value + limit value nx / safety monitoring clock cycle.

235: Smoothed velocity actual value - limit value nx / safety monitoring clock cycle.

236: Smoothed velocity actual value - limit value nx / safety monitoring clock cycle - hysteresis tolerance.

237: SGA n < nx.

238: Speed limit value for SBR (p9568/p9368).

239: Acceleration for SBR (p9581/p9381 and p9583/p9383).

240: Inverse value of acceleration for SBR (p9581/p9381 and p9583/p9383).

241: Deceleration time for SBR (p9582/p9382).

242: Encoderless safety (p9506/p9306).

243: Extended alarm acknowledgment (p9507/p9307).

244: Encoderless actual value sensing filter time (p9587/p9387).

245: Encoderless actual value sensing minimum current (p9588/p9388).

246: Voltage tolerance acceleration (p9589/p9389).

1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.

1001: Initialization error of watchdog timer.

1005: Pulses already suppressed for test stop selection.

1011: Acceptance test status between the monitoring channels differ.

1012: Plausibility violation of the actual value from the encoder.

1020: Cyc. communication failure between the monit. cycles.

1021: Cyc. communication failure between the monit. channel and Sensor Module.

1022: Sign-of-life error for DRIVE-CLiQ encoder CU

1023: Error in the effectiveness test in the DRIVE-CLiQ encoder

1032: Sign-of-life error for DRIVE-CLiQ encoder MM

1033: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder CU

1034: Error checking offset between POS1 and POS2 for DRIVE-CLiQ encoder MM
 1041: Current absolute value too low (encoderless)
 1042: Current/voltage plausibility error
 1043: Too many acceleration phases
 1044: Actual current values plausibility error.
 5000 ... 5140: PROFIsafe message values.
 5000, 5014, 5023, 5024, 5030 ... 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ... 5125, 5132 ... 5135, 5140: An internal software error has occurred (only for internal Siemens troubleshooting).
 5012: Error when initializing the PROFIsafe driver.
 5013: The result of the initialization is different for the two controllers.
 5022: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.
 5025: The result of the F parameterization is different for the two controllers.
 5026: CRC error for the F parameters. The transferred CRC value of the F parameters does not match the value calculated in the PST.
 5065: A communications error was identified when receiving the PROFIsafe telegram.
 5066: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.
 6000 ... 6166: PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).
 6000: An internal software error has occurred (only for internal Siemens troubleshooting).
 6064 ... 6071: Error when evaluating the F parameters. The values of the transferred F parameters do not match the expected values in the PROFIsafe driver.
 6064: Destination address and PROFIsafe address are different (F_Dest_Add).
 6065: Destination address not valid (F_Dest_Add).
 6066: Source address not valid (F_Source_Add).
 6067: Watchdog time not valid (F_WD_Time).
 6068: Incorrect SIL level (F_SIL).
 6069: Incorrect F-CRC length (F_CRC_Length).
 6070: Incorrect F parameter version (F_Par_Version).
 6071: CRC error for the F parameters (CRC1). The transferred CRC value of the F parameters does not match the value calculated in the PROFIsafe driver.
 6072: F parameterization is inconsistent.
 6165: A communications error was identified when receiving the PROFIsafe telegram.
 6166: A time monitoring error (timeout) was identified when receiving the PROFIsafe telegram.
 See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)

Remedy:

The following generally applies:
 The monitoring clock cycles in both channels and the axis types should be checked for equality and the same setting applied if necessary. If the error continues to be identified, increasing the monitoring clock cycles may resolve it.
 Re fault value = 0:
 - no error was identified in this monitoring channel. Note the error message of the other monitoring channel (for MM: C30711).
 Re fault value = 3:
 Commissioning phase:
 Encoder evaluation for own or second channel has been set incorrectly --> Correct the encoder evaluation.
 In operation:
 Check the mechanical design and the encoder signals.
 Re fault value = 4:
 The monitoring clock cycles in both channels should be checked for equality and if required, set the same. In combination with fault value 5 from the other monitoring channel (with MM: C30711), the monitoring clock cycle settings must be increased.
 Re fault value = 1 ... 999:
 - if the fault value is listed under cause: Check the crosswise-compared parameters to which the fault value refers.
 - copy the safety parameters.
 - carry out a POWER ON (power off/on) for all components.
 - upgrade the Motor Module software.
 - upgrade the Control Unit software.
 - correction of the encoder evaluation. The actual values differ as a result of mechanical faults (V belts, travel to a mechanical endstop, wear and window setting that is too narrow, encoder fault, ...).
 Re fault value = 1000:
 - investigate the signal associated with the safety-relevant input (contact problems).
 Re fault value = 1001:
 - carry out a POWER ON (power off/on) for all components.
 - upgrade the Motor Module software.
 - upgrade the Control Unit software.

Re fault value = 1005:

- check the conditions for pulse enable.

Re fault value = 1011:

- for diagnostics, refer to parameter (r9571).

Re fault value = 1012:

- upgrade the Sensor Module software.
- check the encoder parameters in the encoder systems for equality (p9515/p9315, p9519/p9319, p9523/p9323, p9524/p9324, p9525/p9325, p9529/p9329).

Re fault value = 1020, 1021:

- check the communication link.
- increase the monitoring cycle clock settings (p9500, p9511).
- carry out a POWER ON (power off/on) for all components.
- replace the hardware.

Re fault value = 5000, 5014, 5023, 5024, 5030, 5031, 5032, 5042, 5043, 5052, 5053, 5068, 5072, 5073, 5082 ... 5087, 5090, 5091, 5122 ... 5125, 5132 ... 5135, 5140:

- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

Re fault value = 5012:

- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810). It is not permissible for the PROFIsafe address to be 0 or FFFF!

Re fault value = 5013, 5025:

- carry out a POWER ON (power off/on) for all components.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re fault value = 5022:

- check the setting of the values of the F parameters at the PROFIsafe slave (F_SIL, F_CRC_Length, F_Par_Version, F_Source_Add, F_Dest_add, F_WD_Time).

Re fault value = 5026:

- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and update.

Re fault value = 5065:

- check the configuration and communication at the PROFIsafe slave (cons. No. / CRC).
- check the setting of the value for F parameter F_WD_Time on the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re fault value = 5066:

- check the setting of the value for F parameter F_WD_Time on the PROFIsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFIsafe connection.

Re fault value = 6000:

- carry out a POWER ON (power off/on) for all components.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- increase the monitoring cycle clock settings (p9500, p9511).
- upgrade firmware to later version.
- contact the Hotline.
- replace the Control Unit.

Re fault value = 6064:

- check the setting of the value in the F parameter F_Dest_Add at the PROFIsafe slave.
- check the setting of the PROFIsafe address of the Control Unit (p9610) and that of the Motor Module (p9810).

Re fault value = 6065:

- check the setting of the value in the F parameter F_Dest_Add at the PROFIsafe slave. It is not permissible for the destination address to be either 0 or FFFF!

Re fault value = 6066:

- check the setting of the value in the F parameter F_Source_Add at the PROFIsafe slave. It is not permissible for the source address to be either 0 or FFFF!

Re fault value = 6067:

- check the setting of the value in the F parameter F_WD_Time at the PROFIsafe slave. It is not permissible for the watch time to be 0!

Re fault value = 6068:
- check the setting of the value in the F parameter F_SIL at the PROFIsafe slave. The SIL level must correspond to SIL2!

Re fault value = 6069:
- check the setting of the value in the F parameter F_CRC_Length at the PROFIsafe slave. The setting of the CRC2 length is 2-byte CRC in the V1 mode and 3-byte CRC in the V2 mode!

Re fault value = 6070:
- check the setting of the value in the F parameter F_Par_Version at the PROFIsafe slave. The value for the F parameter version is 0 in the V1 mode and 1 in the V2 mode!

Re fault value = 6071:
- check the settings of the values of the F parameters and the F parameter CRC (CRC1) calculated from these at the PROFIsafe slave and, if required, update.

Re fault value = 6072:
- check the settings of the values for the F parameters and, if required, correct.
The following combinations are permissible for F parameters F_CRC_Length and F_Par_Version:
F_CRC_Length = 2-byte CRC and F_Par_Version = 0
F_CRC_Length = 3-byte CRC and F_Par_Version = 1

Re fault value = 6165:
- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F_WD_Time on the PROFIsafe slave and increase if necessary.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

Re fault value = 6166:
- check the configuration and communication at the PROFIsafe slave.
- check the setting of the value for F parameter F_WD_Time on the PROFIsafe slave and increase if necessary.
- evaluate diagnostic information in the F host.
- check PROFIsafe connection.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

C01712	SI Motion CU: Defect in F-IO processing
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	When cross checking and comparing the two monitoring channels, the drive detected a difference between parameters or results of the F-IO processing and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible. The safety message C01711 with message value 0 is also displayed due to initiation of STOP F. If at least one monitoring function is active, the safety message C01701 "SI Motion: STOP B initiated" is output after the parameterized timer has expired. Message value (r9749, interpret decimal): Number of the cross-checked data that resulted in this message. 1: SI discrepancy monitoring time inputs (p10002, p10102). 2: SI acknowledgement internal event input terminal (p10006, p10106). 3: SI STO input terminal (p10022, p10122). 4: SI SS1 input terminal (p10023, p10123). 5: SI SS2 input terminal (p10024, p10124). 6: SI SOS input terminal (p10025, p10125). 7: SI SLS input terminal (p10026, p10126). 8: SI SLS_Limit(1) input terminal (p10027, p10127). 9: SI SLS_Limit(2) input terminal (p10028, p10128). 10: SI Safe State signal selection (p10039, p10139). 11 SI F-DI input mode (p10040, p10140). 12: SI F-DO 0 signal sources (p10042, p10142). 13: Different states for static inactive signal sources (p10006, p10022 ... p10028). 14: SI discrepancy monitoring time outputs (p10002, p10102). 15: SI acknowledgment internal event (p10006, p10106). 16: SI test sensor feedback signal test mode selected for test stop (p10046, p10146, p10047, p10147).

17: SI wait time for test stop at DOs (p10001).
 18 ... 25: SI test sensor feedback signal (p10046, p10146, p10047, p10147). Expected state of internal readback signal, generated from the selected test stop mode.
 26 ... 33: SI test sensor feedback signal (p10046, p10146, p10047, p10147). Expected state of external readback signal, generated from the selected test stop mode.
 34 ... 41: SI test sensor feedback signal (p10046, p10146, p10047, p10147). Expected state of second internal readback signal, generated from the selected test stop mode.
 42: Internal data for processing the second internal readback signal, generated from the selected test stop mode (p10047, p10147).
 43: Internal data for processing the internal readback signal, generated from the selected test stop mode (p10047, p10147).
 44: Internal data for processing the external readback signal, generated from the selected test stop mode (p10047, p10147).
 45: Internal data for initialization state of test stop mode, dependent upon test stop parameters.
 46: SI digital inputs debounce time (p10017, p10117)
 47: Selection F-DI for PROFIsafe (p10050, p10150)
 48: Selection F-DI for PROFIsafe (p10050, p10150)

Remedy:

- check parameterization in the parameters involved and correct if required.
- ensure equality by copying the SI data to the second channel and then carry out an acceptance test.
- check monitoring clock cycle in p9500 and p9300 for equality.

Note:

This message can be acknowledged via F-DI or PROFIsafe.

See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))

C01714 SI Motion CU: Safely-Limited Speed exceeded

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive has moved faster than that specified by the velocity limit value (p9531). The drive is stopped as a result of the configured stop response (p9563).

Message value (r9749, interpret decimal):

100: SLS1 exceeded.

200: SLS2 exceeded.

300: SLS3 exceeded.

400: SLS4 exceeded.

1000: Encoder limit frequency exceeded.

Remedy:

- check the traversing/motion program in the control.
- check the limits for "Safely-Limited Speed (SLS) and if required, adapt (p9531).

This message can be acknowledged as follows:

- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe

- motion monitoring functions with SINUMERIK: Via the machine control panel

Note:

SI: Safety Integrated

SLS: Safely-Limited Speed / SG: Safely reduced speed

See also: p9531 (SI Motion SLS (SG) limit values (Control Unit)), p9563 (SI Motion SLS (SG)-specific stop response (Control Unit))

C01745 SI Motion CU: Checking braking torque for the brake test

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: POWER ON (IMMEDIATELY)

Cause: The scaling of the brake torque for the brake test can be changed using parameter p2003.

An acceptance test must be carried out again for the braking test. This determines whether the braking test is still carried out with the correct braking torque.

Remedy:

- carry out a POWER ON (power off/on) for all components.
- repeat the acceptance test for the safe brake test if the brake test is used.

See also: p2003

C01750 SI Motion CU: Hardware fault safety-relevant encoder

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The encoder that is used for the safety-relevant motion monitoring functions signals a hardware fault.
Message value (r9749, interpret decimal):
Encoder status word 1, encoder status word 2 that resulted in the message.
Remedy:
- check the encoder connection.
- replace the encoder.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel.

C01751 SI Motion CU: Effectivity test error safety-relevant encoder

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The DRIVE-CLiQ encoder for safe motion monitoring signals an error for the effectivity tests.
Message value (r9749, interpret decimal):
Only for internal Siemens troubleshooting.
Remedy:
- check the encoder connection.
- replace the encoder.
This message can be acknowledged as follows:
- motion monitoring functions integrated in the drive: Via Terminal Module 54F (TM54F) or PROFIsafe
- motion monitoring functions with SINUMERIK: Via the machine control panel

C01770 SI Motion CU: Discrepancy error of the fail-safe inputs or outputs

Message value: %1
Drive object: SERVO
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The safety input terminals or output terminals show a different state longer than that parameterized in p10002 (or p10102).
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex
xxxx:
The safety-relevant input terminals F-DI indicate a discrepancy.
Bit 0: Discrepancy for F-DI 0
Bit 1: Discrepancy for F-DI 1
...
yyyy:
The safety-relevant output terminals F-DO indicate a discrepancy.
Bit 0: Discrepancy for F-DO 0
...
Note:
If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.

Remedy:

- check the wiring of the F-DI (contact problems).
- carry out safe acknowledgment (p10006 or INTERNAL EVENT ACKNOWLEDGE via PROFIsafe).

Note:
 Discrepancy error of an F-DI can only be completely acknowledged if safe acknowledgement was carried out once the cause of the error was resolved (p10006). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state.
 F-DI: Failsafe Digital Input
 F-DO: Failsafe Digital Output
 Where switching operations recur cyclically on the FDIs, the discrepancy time must be parameterized as follows:
 td = possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p10000).
 tp = period for a switching operation in ms.
 The following rules must be adhered to:
 $p10002 < (tp/2) - td$ (discrepancy time must be less than half the period minus the actual discrepancy time)
 $p10002 \geq p10000$ (discrepancy time must be no less than P10000)
 $p10002 > td$ (discrepancy time must be greater than the switch discrepancy time which may actually apply)
 Example: If SI sampling cycle is 12 ms and switching frequency is 110 ms, the maximum discrepancy time which can be set is as follows:
 $p10002 \leq 110ms/2 - 12 ms = 43 ms$; this rounds off to $P10002 \leq 36 ms$ (Since the sampling time can only be accepted as a whole SI sampling cycle, the value will need to be rounded up or down to a whole SI sampling time value if it is not an exact multiple of an SI sampling cycle.)

A01772 Test stop fail-safe inputs/outputs active

Message value: -
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The test stop for the fail-safe inputs and/or outputs is currently in progress.
 F1773 is output when a error occurs during the test stop.
Remedy: The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.

F01773 Test stop error

Message value: %1
Drive object: SERVO
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A fault has occurred on the CU side during the test stop for the fail-safe outputs.
 The fault value is output in 0xRRRVWXYZ HEX format.
 The wildcards V,W,X must be interpreted as hexadecimal values and evaluated as binary values.
 Bit0 stands for DO-0, Bit1 for DO-1, Bit2 for DO-2, and Bit3 for DO-4.
 The wildcards Z and Y must be evaluated as hexadecimal values.
 The meaning of the wildcards is as follows:
 R: Reserved
 V: Actual state of the DO channel concerned (see X) on the CU (corresponds to the states read back from the hardware)
 W: Required state of the DO channel concerned (see X)
 X: DO channels concerned which are indicating a fault
 Y:: Reason for the test stop fault
 Z: State of the test stop in which the fault has occurred
 Reason for the test stop fault (Y):
 1=MM side in incorrect test stop state (internal fault)
 2=States of the DO(s) (CU305: readback via DI 22/CU240: readback via DI 2) not as expected
 3=Incorrect timer state on CU side (internal fault)
 4=States of the Diag-DO(s) (CU305: internal readback on the Motor Module channel) not as expected
 5=States of the second Diag-DO(s) (CU305: internal readback on the CU channel) not as expected.
 X and V indicate the DI or Diag-DO state dependent upon the reason for the fault (2, 4 or 5).
 In the event of multiple test stop faults, the first one that occurred is shown.

Test stop state (Z) and associated test actions:

0 to 3 Synchronization phase of test stop between CU and Motor Module no switching operations

4 DO + OFF and DO - OFF

5 Check to see if states are as expected

6 DO + ON and DO - ON

7 Check to see if states are as expected

8 DO + OFF and DO - ON

9 Check to see if states are as expected

10 DO + ON and DO - OFF

11 Check to see if states are as expected

12 DO + OFF and DO - OFF

13 Check to see if states are as expected

14 End of test stop

Diag expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5 :0/-/-1

7 :0/-/-0

8 :0/-/-0

11 :1/-/-1

13 :0/-/-1

Second Diag expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5 :-/-/-1

7 :-/-/-0

8 :-/-/-1

11 :-/-/-0

13 :-/-/-1

DI expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5: -/1/0/-

7: -/0/1/-

8: -/0/0/-

11:-/0/0/-

13:-/1/0/-

Example: Alarm 1773 (CU) is signaled with fault value 0001_0127 and alarm 30773 (MM) is signaled with fault value 0000_0127. This means: In state 7 (Z=7) the state of the external readback signal was not set correctly (Y=2) after DO-0 (X=1) was switched to ON/ON. Fault value 0001_0127 indicates that 0 was expected (W=0) and 1 (V=1) was read back from the hardware. Fault value 0000_0127 on the MM indicates that the states were as expected. In the case of alarm 30773 W and V are always identical; a value of 0 always means that 0 was expected at the readback input but was not present on the other channel (CU).

Remedy:

Check the wiring of the F-DOs and restart the test stop. The fault is withdrawn if the test stop is successfully completed.

In the event of multiple test stop faults, the first one that occurred is shown. Once the test stop has been restarted the next queued test stop fault will be signaled (if there is one).

A01774 Test stop required

Message value: -

Drive object: SERVO

Reaction: NONE

Acknowledge: NONE

Cause:

- after powering up the drive, a test stop has still not been carried out.
- a new test stop is required after commissioning.
- the time to carry out the forced checking procedure (test stop) has expired (p10003).

Remedy: Initiate test stop (BI: p10007).

A01796 (F, N)	SI Motion CU: Wait for communication
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The drive waits for communication to be established with SINUMERIK or TM54F to execute the safety-relevant motion monitoring functions. Note: In this state, the pulses are safely suppressed.
Remedy:	If, after a longer period of time, the message is not automatically withdrawn, the following checks have to be made as appropriate: For communication with SINUMERIK, the following applies: - check any other PROFIBUS messages/signals present and remove their cause. - check that assignment of the axes on the higher-level control to the drives in the drive unit is correct. - check enable signal of the safety-relevant motion monitoring functions for the corresponding axis on the higher-level control and if required, set it. For communication with TM54F, the following applies: - check any other messages/signals present for DRIVE-CLiQ communication with the TM54F and remove their cause. - check the setting of p10010. All the drive objects controlled by the TM54F must be listed. See also: p9601 (SI enable, functions integrated in the drive (Control Unit)), p9801 (SI enable, functions integrated in the drive (Motor Module)), p10010 (SI drive object assignment)
Reaction upon F:	NONE (OFF1, OFF2, OFF3)

C01798	SI Motion CU: Test stop running
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The test stop is active.
Remedy:	None necessary. The message is withdrawn when the test stop is finished. Note: SI: Safety Integrated
C01799	SI Motion CU: Acceptance test mode active
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The acceptance test mode is active. The POWER ON signals of the safety-relevant motion monitoring functions can be acknowledged during the acceptance test using the RESET button of the higher-level control.
Remedy:	None necessary. The message is withdrawn when exiting the acceptance test mode. Note: SI: Safety Integrated

F01800	DRIVE-CLiQ: Hardware/configuration error
Message value:	%1
Drive object:	All objects
Reaction:	Infeed: NONE (OFF1, OFF2) Servo: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2) Vector: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	A DRIVE-CLiQ connection fault has occurred. Fault value (r0949, interpret decimal): 100 ... 107: Communication via DRIVE-CLiQ socket X100 ... X107 has not been switched to cyclic operation. The cause may be an incorrect structure or a configuration that results in an impossible bus timing. 10: Loss of the DRIVE-CLiQ connection. The cause may be, for example, that the DRIVE-CLiQ cable was withdrawn from the Control Unit or as a result of a short-circuit for motors with DRIVE-CLiQ. This fault can only be acknowledged in cyclic communication. 11: Repeated faults when detecting the connection. This fault can only be acknowledged in cyclic communication. 12: A connection was detected but the node ID exchange mechanism does not function. The reason is probably that the component is defective. This fault can only be acknowledged in cyclic communication.
Remedy:	Re fault value = 100 ... 107: - ensure that the DRIVE-CLiQ components have the same firmware releases. - avoid longer topologies for short current controller clock cycles. Re fault value = 10: - check the DRIVE-CLiQ cables at the Control Unit. - remove any short-circuit for motors with DRIVE-CLiQ. - carry out a POWER ON. Re fault value = 11: - check the electrical cabinet design and cable routing for EMC compliance Re fault value = 12: - replace the component involved.

A01840	SMI: Component found without motor data
Message value:	Component number: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	An SMI/DQI without motor data has been found (e.g. SMI installed as replacement part). Alarm value (r2124, interpret decimal): Component number from target topology.
Remedy:	1. Download the SMI/DQI data (motor/encoder data) from the backup again (p4690, p4691). 2. Carry out a POWER ON (power off/on) for this component. Note: DQI: DRIVE-CLiQ Sensor Integrated SMI: SINAMICS Sensor Module Integrated See also: p4690 (SMI spare part component number), p4691 (Save/download SMI spare part data)

A01900 (F)	PROFIBUS: Configuration telegram error
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	A PROFIBUS master attempts to establish a connection using an incorrect configuring telegram. Alarm value (r2124, interpret decimal): 50: Syntax error. 51: Connection established to more drive objects than configured in the device. The drive objects for process data exchange and their sequence are defined in p0978. 52: Too many PZD data words for output or input to a drive object. The number of possible PZD items in a drive object is determined by the number of indices in r2050/p2051 for PZD IF1, and in r8850/p8851 for PZD IF2. 53: Uneven number of bytes for input or output. 54: Cyclic operation not active. 55: Invalid operating state.
Remedy:	Check the bus configuration on the master and slave sides. Re alarm value = 51: Check the list of the drive objects with process data exchange (p0978). With p0978[x] = 0, all of the following drive objects in the list are excluded from the process data exchange. Re alarm value = 52: Check the number of data words for output and input to a drive object.
Reaction upon F:	NONE (OFF1)
Acknowl. upon F:	IMMEDIATELY
A01901 (F)	PROFIBUS: Parameterizing telegram error
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	A PROFIBUS master attempts to establish a connection using an incorrect parameterizing telegram. Alarm value (r2124, interpret decimal): 1: Incorrect parameterizing bits. 10: Illegal length of an optional parameterizing block. 11: Illegal ID of an optional parameterizing block. 20: Double parameterizing block for clock synchronization. 21: Incorrect parameterizing block for clock synchronization. For more information, see A01902. 22: Incorrect parameterizing bits for clock synchronization. 23: Illegal clock synchronization for PZD interface 2. 30: Double parameterizing block for peer-to-peer data transfer. 31: Incorrect parameterizing block for peer-to-peer data transfer.
Remedy:	Check the bus configuration: - bus addresses - slave configuring
Reaction upon F:	NONE (OFF1)
Acknowl. upon F:	IMMEDIATELY

A01902	IF1: PB/PN clock cycle synchronous operation parameterization not permissible
Message value:	%1
Drive object:	All objects
Reaction:	NONE

Reaction:	Infeed: OFF1 Servo: OFF1 (OFF3) Vector: OFF1 (OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The global control telegram to synchronize the clock cycles has failed - in cyclic operation - for several DP clock cycles or has violated the time grid specified in the parameterizing telegram over several consecutive DP clock cycles (refer to the bus cycle time, Tdp and Tpllw).
Remedy:	- check the PROFIBUS cables and connectors. - check whether communication was briefly or permanently interrupted. - check the bus and master for utilization level (e.g. bus cycle time Tdp was set too short). Note: IF1: Interface 1 PB: PROFIBUS PN: PROFINET

F01912	IF1: PB/PN clock cycle synchronous operation sign-of-life failure
Message value:	-
Drive object:	All objects
Reaction:	Infeed: OFF1 Servo: OFF1 (OFF3) Vector: OFF1 (OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The maximum permissible number of errors in the master sign-of-life (clock synchronous operation) has been exceeded in cyclic operation.

- Remedy:**
- check the physical bus configuration (terminating resistor, shielding, etc.).
 - correct the interconnection of the master sign-of-life (p2045).
 - check whether the master correctly sends the sign-of-life (e.g. create a trace with STW2.12 ... STW2.15 and trigger signal ZSW1.3).
 - check the permissible telegram failure rate (p0925).
 - check the bus and master for utilization level (e.g. bus cycle time Tdp was set too short).

Note:

IF1: Interface 1

Message value:	-
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	There is no clock cycle synchronization and DSC is selected. Note: DSC: Dynamic Servo Control
Remedy:	Set the clock cycle synchronization when configuring the bus.

A01940	IF1: PB/PN clock cycle synchronism not reached
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. It was not possible to synchronize to the clock cycle specified by the master. - the master does not send a clock synchronous global control telegram although clock synchronous operation was selected when configuring the bus. - the master is using another clock synchronous DP clock cycle than was transferred to the slave in the parameterizing telegram. - at least one drive object has a pulse enable (not controlled from PROFIBUS/PROFINET either).
Remedy:	- check the master application and bus configuration. - check the consistency between the clock cycle input when configuring the slave and clock cycle setting at the master. - check that no drive object has a pulse enable. Only enable the pulses after synchronizing the PROFIBUS/PROFINET drives. Note: IF1: Interface 1 PB: PROFIBUS PN: PROFINET

A01941	IF1: PB/PN clock cycle signal missing when establishing bus communication
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. The global control telegram for synchronization is not being received.

Remedy: Check the master application and bus configuration.
Note:
 IF1: Interface 1
 PB: PROFIBUS
 PN: PROFINET

A01943 IF1: PB/PN clock cycle signal error when establishing bus communication

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. The global control telegram for synchronization is being irregularly received.
 - the master is sending an irregular global control telegram.
 - the master is using another clock synchronous DP clock cycle than was transferred to the slave in the parameterizing telegram.
Remedy:
 - check the master application and bus configuration.
 - check the consistency between the clock cycle input when configuring the slave and clock cycle setting at the master.
Note:
 IF1: Interface 1
 PB: PROFIBUS
 PN: PROFINET

A01944 IF1: PB/PN sign-of-life synchronism not reached

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The bus is in the data exchange state and clock synchronous operation has been selected using the parameterizing telegram. Synchronization with the master sign-of-life (STW2.12 ... STW2.15) could not be completed because the sign-of-life is changing differently to how it was configured in the Tmapc time grid.
Remedy:
 - ensure that the master correctly increments the sign-of-life in the master application clock cycle Tmapc.
 - correct the interconnection of the master sign-of-life (p2045).

F01951	CU DRIVE-CLiQ: Synchronization application clock cycle missing
Message value:	%1
Drive object:	All objects
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	If DRIVE-CLiQ components with different application clock cycle are operated on a DRIVE-CLiQ port, this requires synchronization with the Control Unit. This synchronization routine was unsuccessful. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade the software of the DRIVE-CLiQ components. - upgrade the Control Unit software.

F01952	CU DRIVE-CLiQ: Synchronization of component not supported
Message value:	%1
Drive object:	All objects
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The existing system configuration requires that the connected DRIVE-CLiQ components support the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and the application clock cycle. However, not all DRIVE-CLiQ components have this functionality. Fault value (r0949, interpret decimal): Component number of the first faulty DRIVE-CLiQ component.
Remedy:	Upgrade the firmware of the component specified in the fault value. Note: If required, also upgrade additional components in the DRIVE-CLiQ line.
A01953	CU DRIVE-CLiQ: Synchronization not completed
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started but was not completed within the selected time tolerance. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	Carry out a POWER ON (power off/on) for all components. If the error occurs after the drive sampling times were adjusted, and if a Terminal Module 31 (TM31) is being used, the sampling times (p0115, p4099) should be set as integer multiples to the drive clock cycles (p0115).
F01954	CU DRIVE-CLiQ: Synchronization unsuccessful
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started and was not able to be successfully completed. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	1. Ensure perfect functioning of the DRIVE-CLiQ. 2. Initiate a new synchronization, e.g. as follows: - remove the PROFIBUS master and re-insert again. - restart the PROFIBUS master. - power down the Control Unit and power it up again. - press the Control Unit reset button. - reset the parameter and download the saved parameters (p0009 = 30, p0976 = 2).
A01955	CU DRIVE-CLiQ: Synchronization DO not completed
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	After the drive system is powered up, the synchronization between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle was started but was not completed within the selected time tolerance. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	Carry out a POWER ON (power off/on) for all components of the DO.

A01990 (F)	USS: PZD configuration error
Message value:	%1
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The configuration of the process data (PZD) for the USS protocol is incorrect. Alarm value (r2124, interpret decimal): 2: PZD amount (p2022) too great for the first drive object (p978[0]). The number of possible PZD items in a drive object is determined by the number of indices in r2050/p2051 for PZD IF1, and in r8850/p8851 for PZD IF2.
Remedy:	Re alarm value = 2: Check the amount of USS PZD (p2022) and the maximum PZD amount (r2050/p2051) for the first drive object (p0978[0]).

Cause:	The drive object specified for connection does not exist. See also: p4815 (Function generator drive number)
Remedy:	Use the existing drive object with the corresponding number. Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator. See also: p4815 (Function generator drive number)
A02006	Function generator: No drive specified for connection
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	No drive specified for connection in p4815. See also: p4815 (Function generator drive number)
Remedy:	At least one drive to be connected must be specified in p4815. Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator. See also: p4815 (Function generator drive number)

A02007	Function generator: Drive not SERVO / VECTOR
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The drive object specified for connection is not a SERVO / VECTOR. See also: p4815 (Function generator drive number)
Remedy:	Use a SERVO / VECTOR drive object with the corresponding number. Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator.
A02008	Function generator: Drive specified a multiple number of times
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The drive object specified for connection is already specified. Alarm value (r2124, interpret decimal): Drive object number of the drive object that is specified a multiple number of times.
Remedy:	Specify a different drive object. Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator.
A02009	Function generator: Illegal mode
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The set operating mode (p1300) of the drive object is not permissible when using the function generator. Alarm value (r2124, interpret decimal): Number of the drive object involved.
Remedy:	Change the operating mode for this drive object to p1300 = 20 (encoderless speed control) or p1300 = 21 (speed control with encoder). Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator.
A02010	Function generator: Speed setpoint from the drive is not zero
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The speed setpoint of a drive selected for connection is greater than the value for the standstill detection set using p1226. Alarm value (r2124, interpret decimal): Number of the drive object involved.
Remedy:	For all of the drives specified for connection, set the speed setpoints to 0. Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator.

A02011	Function generator: The actual drive speed is not zero
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The speed actual value of a drive selected for connection is greater than the value for the standstill detection set using p1226. Alarm value (r2124, interpret decimal): Number of the drive object involved.
Remedy:	Set the relevant drives to zero speed before starting the function generator. Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator.
A02015	Function generator: Drive enable signals missing
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The master control and/or enable signals are missing to connect to the specified drive. Alarm value (r2124, interpret decimal): Number of the drive object involved. See also: p4815 (Function generator drive number)
Remedy:	Fetch the master control to the specified drive object and set all enable signals. Note: The alarm is reset as follows: - remove the cause of this alarm. - restart the function generator.
A02016	Function generator: Magnetizing running
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	Magnetizing has not yet been completed on a drive object specified for connection. Alarm value (r2124, interpret decimal): Number of the drive object involved. See also: p4815 (Function generator drive number)
Remedy:	Wait for magnetizing of the motor (r0056.4). Note: The alarm is reset as follows: - restart the function generator. See also: r0056 (Status word, closed-loop control)
A02020	Function generator: Parameter cannot be changed
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	This parameter setting cannot be changed when the function generator is active (p4800 = 1). See also: p4810, p4812, p4813, p4815, p4820, p4821, p4822, p4823, p4824, p4825, p4826, p4827, p4828, p4829

Remedy:

- stop the function generator before parameterizing (p4800 = 0).
- if required, start the function generator (p4800 = 1).

Note:
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4800 (Function generator control)

A02025 Function generator: Period too short

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The value for the period is too short.
See also: p4821 (Function generator period)

Remedy: Check and adapt the value for the period.

Note:
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4821 (Function generator period)

A02026 Function generator: Pulse width too high

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The selected pulse width is too high.
The pulse width must be less than the period duration.
See also: p4822 (Function generator pulse width)

Remedy: Reduce pulse width.

Note:
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4821 (Function generator period), p4822 (Function generator pulse width)

A02030 Function generator: Physical address equals zero

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The specified physical address is zero.
See also: p4812 (Function generator physical address)

Remedy: Set a physical address with a value other than zero.

Note:
The alarm is reset as follows:

- remove the cause of this alarm.
- restart the function generator.

See also: p4812 (Function generator physical address)

A02040 Function generator: Illegal value for offset

Message value: -

Drive object: All objects

Reaction: NONE

Acknowledge: NONE

Cause: The value for the offset is higher than the value for the upper limit or lower than the value for the lower limit.
See also: p4826 (Function generator offset)

Remedy: Adjust the offset value accordingly.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: p4826 (Function generator offset), p4828 (Function generator lower limit), p4829 (Function generator upper limit)

A02041 Function generator: Illegal value for bandwidth

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The bandwidth referred to the time slice clock cycle of the function generator has either been set too low or too high.
Depending on the time slice clock cycle, the bandwidth is defined as follows:
 $\text{Bandwidth_max} = 1 / (2 * \text{time slice clock cycle})$
 $\text{Bandwidth_min} = \text{Bandwidth_max} / 100000$
Example:
Assumption: p4830 = 125 μs
--> $\text{Bandwidth_max} = 1 / (2 * 125 \mu\text{s}) = 4000 \text{ Hz}$
--> $\text{Bandwidth_min} = 4000 \text{ Hz} / 100000 = 0.04 \text{ Hz}$
Note:
p4823: Function generator bandwidth
p4830: Function generator time slice clock cycle
See also: p4823 (Function generator bandwidth), p4830 (Function generator time slice cycle)
Remedy: Check the value for the bandwidth and adapt accordingly.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.

A02047 Function generator: Time slice clock cycle invalid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The time slice clock cycle selected does not match any of the existing time slices.
See also: p4830 (Function generator time slice cycle)
Remedy: Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.
Note:
The alarm is reset as follows:
- remove the cause of this alarm.
- restart the function generator.
See also: r7901 (Sampling times)

A02050 Trace: Start not possible

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The trace has already been started.
See also: p4700 (Trace control)
Remedy: Stop the trace and, if necessary, start again.

A02055 Trace: Recording time too short

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The trace duration is too short.
The minimum is twice the value of the trace clock cycle.
See also: p4721 (Trace recording time)
Remedy: Check the selected recording time and, if necessary, adjust.

A02056 Trace: Recording cycle too short

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected recording cycle is shorter than the selected basic clock cycle 0 (p0110[0]).
See also: p4720 (Trace recording cycle)
Remedy: Increase the value for the trace cycle.

A02057 Trace: Time slice clock cycle invalid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The time slice clock cycle selected does not match any of the existing time slices.
See also: p4723 (Time slice cycle for trace)
Remedy: Enter an existing time slice clock cycle. The existing time slices can be read out via p7901.
See also: r7901 (Sampling times)

A02058 Trace: Time slice clock cycle for endless trace not valid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected time slice clock cycle cannot be used for the endless trace
See also: p4723 (Time slice cycle for trace)
Remedy: Enter the clock cycle of an existing time slice with a cycle time ≥ 2 ms for up to 4 recording channels or ≥ 4 ms from 5 recording channels per trace.
The existing time slices can be read out via p7901.
See also: r7901 (Sampling times)

A02059 Trace: Time slice clock cycle for 2 x 8 recording channels not valid

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The selected time slice clock cycle cannot be used for more than 4 recording channels.
See also: p4723 (Time slice cycle for trace)
Remedy: Enter the clock cycle of an existing time slice with a cycle time ≥ 4 ms or reduce the number of recording channels to 4 per trace.
The existing time slices can be read out via p7901.
See also: r7901 (Sampling times)

A02060	Trace: Signal to be traced missing
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	- a signal to be traced was not specified. - the specified signals are not valid. See also: p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3)
Remedy:	- specify the signal to be traced. - check whether the relevant signal can be traced.
A02061	Trace: Invalid signal
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	- the specified signal does not exist. - the specified signal can no longer be traced (recorded). See also: p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3)
Remedy:	- specify the signal to be traced. - check whether the relevant signal can be traced.
A02062	Trace: Invalid trigger signal
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	- a trigger signal was not specified. - the specified signal does not exist. - the specified signal is not a fixed-point signal. - the specified signal cannot be used as a trigger signal for the trace. See also: p4711 (Trace trigger signal)
Remedy:	Specify a valid trigger signal.
A02063	Trace: Invalid data type
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The specified data type to select a signal using a physical address is invalid. See also: p4711 (Trace trigger signal), p4730 (Trace record signal 0), p4731 (Trace record signal 1), p4732 (Trace record signal 2), p4733 (Trace record signal 3)
Remedy:	Use a valid data type.
A02070	Trace: Parameter cannot be changed
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The trace parameter settings cannot be changed when the trace is active. See also: p4700, p4710, p4711, p4712, p4713, p4714, p4715, p4716, p4720, p4721, p4722, p4730, p4731, p4732, p4733, p4780, p4781, p4782, p4783, p4789, p4795
Remedy:	- stop the trace before parameterization. - if required, start the trace.

A02075	Trace: Pretrigger time too long
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected pretrigger time must be shorter than the trace time. See also: p4721 (Trace recording time), p4722 (Trace trigger delay)
Remedy:	Check the pretrigger time setting and change if necessary.
F02080	Trace: Parameterization deleted due to unit changeover
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The trace parameterization in the drive unit was deleted due to a unit changeover or a change in the reference parameters.
Remedy:	Restart trace.
A02099	Trace: Insufficient Control Unit memory
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The memory space still available on the Control Unit is no longer sufficient for the trace function.
Remedy:	Reduce the memory required, e.g. as follows: - reduce the trace time. - increase the trace clock cycle. - reduce the number of signals to be traced. See also: r4708 (Trace memory space required), r4799 (Trace memory location free)
A02100	CU: Computing dead time current controller too short
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The value in p0118 produces a dead time of one clock cycle because it is prior to setpoint availability. A possible cause could be, for example, that the system characteristics no longer match those parameterized after a component has been replaced. Alarm value (r2134, floating point): The minimum value for p0118 where a dead time no longer occurs.
Remedy:	- set p0118 to a value greater than or equal to the alarm value. - set p0117 to an automatic setting. - check the firmware releases of the components involved. See also: p0117 (Current controller computing dead time mode), p0118 (Current controller computing dead time)
A02150	OA: Application cannot be loaded
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The system was not able to load an OA application. Alarm value (r2124, interpret hexadecimal): Only for internal Siemens troubleshooting.

Remedy:

- carry out a POWER ON (power off/on) for all components.
- upgrade firmware to later version.
- contact the Hotline.

Note:
OA: Open Architecture
See also: r4950, r4955, p4956, r4957

F03000 NVRAM fault on action

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A fault occurred during execution of action p7770 = 1, 2 for the NVRAM data.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex
 yy: Fault cause
 yy = 1:
 The action p7770 = 1 is not supported by this version if Drive Control Chart (DCC) is activated for the drive object concerned.
 yy = 2:
 The data length of the specified application is not the same in the NVRAM and the backup.
 yy = 3:
 The data checksum in p7774 is not correct.
 yy = 4:
 No data available to load.
 xx: Application ID
 See also: p7770 (NVRAM action)
Remedy:

F03001 NVRAM checksum incorrect

Message value: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A checksum error occurred when evaluating the non-volatile data (NVRAM) on the Control Unit.
 The NVRAM data affected was deleted.
Remedy: Carry out a POWER ON (power off/on) for all components.

F03500 (A) TM: Initialization

Message value: %1
Drive object: All objects
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: When initializing the Terminal Modules, the terminals of the Control Unit or the Terminal Board 30, an internal software error has occurred.
 Fault value (r0949, interpret decimal):
 The thousands digit = 1 ... 3:
 The component number (p0151) of the module involved is specified at the units, tens and hundreds digit.
Remedy:
 - power down the power supply for the Control Unit and power it up again.
 - check the DRIVE-CLiQ connection.
 - if required, replace the Terminal Module.
 The Terminal Module should be directly connected to a DRIVE-CLiQ socket of the Control Unit.
 If the fault occurs again, replace the Terminal Module.
 Reaction upon A: NONE
 Acknowl. upon A: NONE

A03501 TM: Sampling time change

Message value: -
Drive object: All objects
Reaction: NONE
Acknowledge: NONE
Cause: The sampling times of the inputs/outputs were changed.
 This change only becomes valid after the next boot.
Remedy: Carry out a POWER ON.

F03505 (N, A)	TM: Analog input wire breakage
Message value:	%1
Drive object:	A_INF, B_INF, CU_CX32, CU_I, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The input current of the Terminal Module analog input has exceeded the threshold value parameterized in p4061[x]. This fault can only occur if p4056[x] = 3 (4 ... 20 mA with monitoring) is set. Index x = 0: Analog input 0 (X522.1 to .3) Index x = 1: Analog input 1 (X522.4 to .5) Fault value (r0949, interpret decimal): The component number (p0151) of the module involved is specified at the units, tens and hundreds digit. The thousands digit specifies the analog input involved: 0: Analog input 0 (AI 0), 1: Analog input 1 (AI 1). The leading zero of analog input 0 (AI 0) is masked out of the fault value.
Remedy:	Check the connection to the signal source for interruptions. Check the magnitude of the injected current - it is possible that the infed signal is too low. Please note that the input has a load resistance of 250 Ohm. The input current measured by the Terminal Module can be read out from r4052[x].

A05000 (N)	Power unit: Overtemperature heat sink AC inverter
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The alarm threshold for overtemperature at the inverter heat sink has been reached. The response is set using p0290. If the temperature of the heat sink increases by an additional 5 K, then fault F30004 is initiated.
Remedy:	Check the following: - is the ambient temperature within the defined limit values? - have the load conditions and the load duty cycle been appropriately dimensioned? - has the cooling failed?
Reaction upon N:	NONE
Acknowl. upon N:	NONE
A05001 (N)	Power unit: Chip overtemperature
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Alarm threshold for overtemperature of the power semiconductor in the AC converter has been reached. The response is set using p0290. If the chip temperature increases by an additional 15 K, then fault F30025 is triggered.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- have the load conditions and the load duty cycle been appropriately dimensioned?
- has the cooling failed?
- pulse frequency too high?
See also: r0037, p0290 (Power unit overload response)

Reaction upon N: NONE

Acknowl. upon N: NONE

A05002 (N) Power unit: Air intake overtemperature

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The alarm threshold for the air intake overtemperature has been reached. For air-cooled power units, the threshold is 42 °C (hysteresis 2 K). The response is set using p0290.
If the air intake temperature increases by an additional 13 K, then fault F30035 is output.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- has the fan failed? Check the direction of rotation.

Reaction upon N: NONE

Acknowl. upon N: NONE

A05003 (N) Power unit: Internal overtemperature

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The alarm threshold for internal overtemperature has been reached.
If the temperature inside the power unit increases by an additional 5 K, then fault F30036 is triggered.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- has the fan failed? Check the direction of rotation.

Reaction upon N: NONE

Acknowl. upon N: NONE

A05004 (N) Power unit: Rectifier overtemperature

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The alarm threshold for the overtemperature of the rectifier has been reached. The response is set using p0290.
If the temperature of the rectifier increases by an additional 5 K, then fault F30037 is triggered.

Remedy: Check the following:
- is the ambient temperature within the defined limit values?
- have the load conditions and the load duty cycle been appropriately dimensioned?
- has the fan failed? Check the direction of rotation.
- has a phase of the line supply failed?
- is an arm of the supply (incoming) rectifier defective?

Reaction upon N: NONE

Acknowl. upon N: NONE

A05005	Cooling system: Cooling medium flow rate too low
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Cooling system: Alarm - flow rate has fallen below the alarm value
Remedy:	
A05006 (N)	Power unit: Overtemperature thermal model
Message value:	-
Drive object:	A_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The temperature difference between the chip and heat sink has exceeded the permissible limit value (blocksize power units only). Depending on p0290, an appropriate overload response is initiated. See also: r0037
Remedy:	None necessary. The alarm disappears automatically once the limit value is undershot. Note: If the alarm does not disappear automatically and the temperature continues to rise, this can result in fault F30024. See also: p0290 (Power unit overload response)
Reaction upon N:	NONE
Acknowled. upon N:	NONE
N05007 (A)	Power unit: Overtemperature thermal model (chassis PU)
Message value:	-
Drive object:	A_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The temperature difference between the chip and heat sink has exceeded the permissible limit value (r0293) (chassis power units only). Depending on p0290, an appropriate overload response is initiated. See also: r0037, r0293 (Power unit alarm threshold model temperature)
Remedy:	None necessary. The alarm disappears automatically once the limit value is undershot. See also: p0290 (Power unit overload response)
Reaction upon A:	NONE

Message value:	-
Drive object:	A_INF, B_INF, S_INF, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The deviation of the DC link voltage measured values exceeds the alarm threshold specified in p7011.
Remedy:	- inhibit the pulses of the faulted power unit (p7001). - check the DC link connecting cables. - the DC link voltage measurement is incorrect and must be calibrated or renewed.
Reaction upon F:	Infeed: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F:	IMMEDIATELY

A05054	Parallel circuit: Power unit deactivated
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	For the drive object involved, fewer power unit components connected in parallel are active than exist in the target topology. Operation is only possible at reduced power (power derating).
Remedy:	Reactivate the deactivated power unit components. See also: p0125 (Activate/deactivate power unit components), p0895 (Activate/deactivate power unit components), p0897 (Parking axis selection)

F05055	Power circuit: Power units with different code numbers
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	The code numbers of the power units do not match. Fault value (r0949, interpret decimal): Parameter in which the first different power unit code number was detected.
Remedy:	For parallel circuit configurations, only power units with identical power unit data may be used.
F05056	Parallel circuit: Power unit EPROM versions differ
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	The EEPROM versions of the power units do not match. Fault value (r0949, interpret decimal): Parameter in which the first different version number was detected.
Remedy:	For parallel circuit configurations, only power units with identical EEPROM versions may be used.
F05057	Parallel circuit: Power unit firmware versions differ
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	The firmware versions of the power units connected in parallel do not match. Fault value (r0949, interpret decimal): Parameter in which the first different version number was detected.
Remedy:	For parallel circuit configurations, only power units with identical firmware versions may be used.
F05058	Parallel circuit: VSM EEPROM versions differ
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The EEPROM versions of the Voltage Sensing Modules (VSM) do not match. Fault value (r0949, interpret decimal): Parameter in which the first different version number was detected.
Remedy:	For parallel circuit configurations, only Voltage Sensing Modules (VSM) with identical EEPROM versions may be used.
F05059	Parallel circuit: VSM firmware versions differ
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The firmware versions of the Voltage Sensing Module (VSM) do not match. Fault value (r0949, interpret decimal): Parameter in which the first different version number was detected.
Remedy:	For parallel circuit configurations, only Voltage Sensing Modules (VSM) with identical firmware versions may be used.

F05060	Parallel circuit: Power unit firmware version does not match
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Firmware from version V02.30.01.00 is required when connecting the power units in parallel.
Remedy:	Update the firmware of the power units (at least V02.30.01.00).
F05061	Infeed, number of VSM
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The number of active Voltage Sensing Modules (VSM) for the drive object infeed with chassis power units is not correct. For A_Infeed, each active power unit must be assigned an active VSM also for a parallel circuit configuration. For S_Infeed, the active drive object, must be assigned at least one active VSM. Fault value (r0949, interpret decimal): Number of VSMs that are currently assigned to the drive object.
Remedy:	Adapts the number of active Voltage Sensing Modules (VSM).
F06000	Infeed: Precharging monitoring time expired
Message value:	-
Drive object:	A_INF, B_INF, S_INF
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY
Cause:	After the line contactor closes the power unit does not signal the READY state within the monitoring time (p0857). The end of the DC link pre-charging was not able to be completed for one of the following reasons: 1) There is no line supply voltage connected. 2) The line contactor/line side switch has not been closed. 3) The line supply voltage is too low. 4) Line supply voltage incorrectly set (p0210). 5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit. 6) The pre-charging resistors are overheated as the DC link capacitance is too high. 7) The pre-charging resistors are overheated because when there is no "ready for operation" (r0863.0) of the infeed unit, power is taken from the DC link. 8) The pre-charging resistors are overheated as the line contactor was closed during the DC link fast discharge through the Braking Module. 9) The DC link has either a ground fault or a short-circuit. 10) The pre-charging circuit is possibly defective (only for chassis units). See also: p0210 (Drive unit line supply voltage), p0857 (Power unit monitoring time)
Remedy:	In general: - check the line supply voltage at the connecting terminals. - check the line supply voltage setting (p0210). - check the monitoring time and, if required, increase (p0857). - where relevant, observe additional power unit messages/signals (e.g. F30027). - the following applies to booksize units: Wait (approx. 8 min.) until the pre-charging resistors have cooled down. For this purpose, preferably disconnect the infeed unit from the line supply. Re 5): - carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual). Re 6): - check the total capacitance of the DC link and reduce in accordance with the maximum permissible DC-link capacitance if necessary (refer to the appropriate Equipment Manual)

Re 7):

- interconnect the ready-for-operation signal from the infeed unit (r0863.0) in the enable logic of the drives connected to this DC link

Re 8):

- check the connections of the external line contactor. The line contactor must be open during DC-link fast discharge.

Re 9):

- check the DC link for ground faults or short circuits.

F06010 Infeed: Power unit EP 24 V missing in operation

Message value: -

Drive object: A_INF, B_INF, S_INF

Reaction: OFF2 (OFF1)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: In operation, withdraw the pulse enable at terminal EP at the Line Module (X21.3, X21.4).

Remedy: - do not open the Line Side Switch in operation - only when the pulses are inhibited.
- check the wiring of the DP input (X21.3, X21.4) at the Line Module to exclude any poor contacts.

F06050 Infeed: Smart Mode not supported

Message value: -

Drive object: A_INF, S_INF

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The power unit does not support the Smart Mode.

Remedy: - set the suitable sampling time $250 \mu s \leq p0115[0] \leq 400 \mu s$ (e.g. by setting p0112 and p0115 to the factory setting).
- upgrade the power unit software and/or hardware for the Smart Mode. The availability of the Smart Mode function is displayed in r0192.
- for A_INF the following applies: Deactivate the Smart Mode with p3400.0 = 0 and activate the voltage control with p3400.3 = 1. For booksize power units, it must be noted that for a supply voltage $p0210 > 415 V$ only the Smart Mode is possible in the presetting. If DC link voltages above 660 V are permissible in the application, then voltage-controlled operation can be activated with p0280, p0210, p3400 and p3510. The information regarding p0210 should be carefully noted.
See also: r0192 (Power unit firmware properties)

F06052 Infeed: Filter temperature evaluation not supported

Message value: -

Drive object: A_INF, S_INF

Reaction: OFF2 (NONE)

Acknowledge: IMMEDIATELY

Cause: The power unit does not support filter temperature evaluation.
This feature (r0192.11) is required when an Active Interface Module is used as a line filter (p0220 = 41 ... 45).

Remedy: Upgrade the firmware for the power unit to a later version.
See also: r0192 (Power unit firmware properties), p0220 (Infeed line filter type)

F06100 Infeed: Shutdown due to line supply undervoltage condition

Message value: %1

Drive object: A_INF, B_INF, S_INF

Reaction: OFF2 (OFF1)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The filtered (steady-state) value of the line supply voltage is less than the fault threshold (p0283).
Fault condition: $V_{rms} < p0283 * p0210$
Fault value (r0949, floating point):
Actual steady-state line supply voltage.
See also: p0283 (Line supply undervoltage, shutdown (trip) threshold)

Remedy: - check the line supply.
- check the line supply voltage (p0210).
- check the fault threshold (p0283).

A06105 (F) Infeed: Line supply undervoltage

Message value: %1
Drive object: A_INF, B_INF, S_INF
Reaction: NONE
Acknowledge: NONE
Cause: The filtered (steady-state) value of line supply voltage is lower than the alarm threshold (p0282).
Alarm condition: $V_{rms} < p0282 * p0210$
Alarm value (r2124, floating point):
Actual steady-state line supply voltage.
See also: p0282 (Line supply undervoltage, alarm threshold)
Remedy:
- check the line supply.
- check the line supply voltage (p0210).
- check the alarm threshold (p0282).
Reaction upon F: NONE (OFF1, OFF2)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F06200 Infeed: Failure of one or several line phases

Message value: -
Drive object: A_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Failure overvoltage in one or several line supply phases.
The fault can be output in two operating states:
1. During the power-on phase of the infeed unit.
The measured line supply angle deviates from the regular characteristic for a 3-phase system - the PLL cannot be synchronized.
The fault occurs immediately after power-up if, when operating with a VSM, the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
2. While the infeed is operational.
After a voltage dip has been detected or an overvoltage (note A06205) in one or several line phases a fault occurred within 100 ms (also refer to other relevant messages). Generally, before fault message F06200 is output, Alarm A06205 occurs at least once, whose warning value can provide information regarding the cause of the line supply fault.
Probable causes of the fault:
- voltage dip on the line side or phase failure or overvoltage lasting longer than 10 ms.
- overload condition on the load side with peak current.
- line reactor missing.
Remedy:
- check the line supply and fuses.
- check the connection and size (rating) of the line reactor.
- check and correct the phase assignment at the VSM (X521 or X522) and at the power unit.
- check the load.
- if failed in operation, carefully note the previous alarm messages A6205 with alarm values.
See also: p3463 (Infeed, line angle change, phase failure detection)

A06205 (F)	Infeed: Voltage dip in at least one line supply phase
Message value:	%1
Drive object:	A_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	Voltage dip or overvoltage in one or several line supply phases has been detected in operation. The pulses are then inhibited for a time of at least 8 ms. The operating signal of the infeed unit in r0863.0 remains and the pulse inhibit due to the phase failure is displayed in r3405.2. Alarm value (r2124, bitwise coded cause of the alarm): Bit 0: Line angle deviation (limit value p3463) due to a line supply fault Bit 2: Active current deviation Bit 3: Line frequency deviation (limit values: 115 % * p0284, 85 % * p0285) Bit 4: Line overvoltage (limit value 120 % * p0281 * p0210) Bit 5: Line undervoltage (limit value 20 % * p0210) Bit 7: Peak current fault Bit 8: Smart Mode without VSM (p3400.5 = 0): Line angle deviation Bit 9: Smart Mode: DC link voltage dip Bit 10: Smart Mode: Line currents not symmetrical
Remedy:	Generally, the following applies when an alarm message is output: - check the line supply and fuses. - check the line supply quality and system fault level. - check the load. Dependent on the alarm value in r2124, the following applies: Bit 0 = 1: Line fault occurred or poor/incorrect controller setting. For poor line quality or frequent line supply change-over operations, when required, limit value p3463 can be increased until the alarm value no longer occurs. Bit 2 = 1: Line fault occurred or poor/incorrect controller setting. - check the controller setting and load. Bit 3 = 1: Line fault occurred. For poor line quality or frequent line changeover operations, when required, limit values p0284 and p0285 can be increased until the alarm value no longer occurs. Bit 4 = 1: Line interrupted or line overvoltage has occurred. Bit 5 = 1: Line interrupted or line undervoltage has occurred. Bit 7 = 1: Peak current trip due to line fault or overload. Check the load. Bit 8 = 1: Line fault occurred. Bit 9 = 1: Line undervoltage or overload. Check the load. Bit 10 = 1: Line supply interrupted in at least one line phase. Check the fuses. See also: r3405, p3463 (Infeed, line angle change, phase failure detection)
Reaction upon F:	NONE (OFF1, OFF2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
F06207 (N, A)	Infeed: Line currents not symmetrical
Message value:	-
Drive object:	A_INF, S_INF
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	Asymmetry of the currents in the line phase too high. The most probable cause is failure of a line phase.
Remedy:	- check the line supply and fuses. - check the connection and size (rating) of the line reactor. - check the previous alarm A06205 and the alarm value.
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F06210	Infeed: Summation current too high
Message value:	%1
Drive object:	A_INF, B_INF, S_INF
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The smoothed total of the phase currents ($i_1 + i_2 + i_3$) is greater than 4 % of the maximum power unit current (r0209). Possible causes: - the DC link has a ground fault that results in a high summation current (r0069.6). The DC component in the line currents can damage/destroy the power unit, line reactor or line filter! - the zero point calibration of the current measurement was not carried out (p3491, A06602). - defective current measurement in the power unit. Fault value (r0949, floating point): Smoothed total of the phase currents.
Remedy:	- check the DC link for a low-ohmic or high-ohmic ground fault and if present, remove. - increase the monitoring time of the current offset measurement (p3491). - replace the power unit if necessary.

F06211	Infeed: Summation current impermissibly high
Message value:	%1
Drive object:	A_INF
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The smoothed sum of the phase currents ($i_1 + i_2 + i_3$) is impermissibly high. The summation current has exceeded the assigned ground fault monitoring threshold (p0287). Possible causes: - there is a ground fault that results in a high summation current (r0069.6). The DC component in the line currents can damage/destroy the power unit, line reactor or line filter! - the zero point calibration of the current measurement was not carried out (p3491, A06602). - defective current measurement in the power unit. Fault value (r0949, floating point): Smoothed total of the phase currents.
Remedy:	- check the line supply for ground faults and remove any that are present. - check the set ground fault monitoring threshold (p0287). - replace the power unit if necessary.

A06215 (F)	Infeed: Summation current too high
Message value:	%1
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The smoothed total of the phase currents ($i_1 + i_2 + i_3$) is greater than 3 % of the maximum power unit current (r0209). Possible causes: - the DC link has a ground fault that results in a high summation current (r0069.6). The DC component in the line currents can damage/destroy the power unit, line reactor or line filter! - the zero point calibration of the current measurement was not carried out (p3491, A06602). - defective current measurement in the power unit. Alarm value (r2124, floating point): Smoothed total of the phase currents.
Remedy:	- check the DC link for a low-ohmic or high-ohmic ground fault and if present, remove. - increase the monitoring time of the current offset measurement (p3491). - replace the power unit if necessary.
Reaction upon F:	NONE (OFF1, OFF2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)

A06250 (F, N)	Infeed: Defective capacitor(s) in at least one phase of line filter
Message value:	%1
Drive object:	A_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	A change in the line filter capacitance was detected in at least one line phase. The voltages and phase currents of the line filter, measured using a Voltage Sensing Module (VSM), indicate a deviation of the filter capacitances from the value parameterized in p0221. A change or a defect of the line filter capacitors results in a shift of the resonant frequencies and can result in severe damage to the drive system. Alarm value (r2124, floating point): The calculated present capacitance in μF (rounded-off to an integer number). The 1st decimal point specifies the number of the phase (1, 2, 3) where the capacitance deviates from the specified value.
Remedy:	- check the parameterized value of the filter capacitance (p0221). - check the correct wiring of the Voltage Sensing Module (VSM): Differential voltages u12 and u23 must be present at the 100 V/690 V inputs of the VSM; the phase currents of the line filter must be connected to the 10 V inputs through a current - voltage converter. - check the alarm limits for the permissible filter capacitance deviation (p3676). - check the scaling of the line supply voltage measurement using the VSM (p3660). - check the scaling of the filter current measurement using the VSM (p3670). - check the line filter capacitors and if required, replace the line filter. See also: p0221 (Infeed filter capacitance), p3660 (VSM input line supply voltage, voltage scaler), p3670 (VSM 10 V input CT gain), p3676 (VSM line filter capacitance alarm threshold)
Reaction upon F:	NONE (OFF1, OFF2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
Reaction upon N:	NONE
Acknowl. upon N:	NONE
A06260	Infeed: Temperature in the line filter too high
Message value:	-
Drive object:	A_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The temperature monitoring in the line filter has responded. If the temperature remains too high during the complete monitoring time, this results in fault F06261. Note: The temperature monitoring is only available for an Active Interface Module.
Remedy:	- check whether the line filter type set in p0220[0] matches the line filter that is actually connected. Ensure that the line filter specified for the infeed being used is connected or correct the setting of the line filter type in P0220[0]. - temperature monitoring is mandatory for AIM line filters (refer to P0220). Ensure that the line filter temperature switch is correctly and reliably connected to input X21 of the infeed. - reduce the ambient temperature of the line filter. - reduce the load on the infeed and the filter module. - check the magnitude of the line supply voltage. - the internal fan of the filter module is defective. Replace the fan if necessary. - defective temperature switch of the filter module. Replace the filter module if necessary.
F06261	Infeed: Temperature in the line filter permanently too high
Message value:	-
Drive object:	A_INF, S_INF
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY
Cause:	After the temperature monitoring responded, the temperature in the line filter was permanently exceeded. Note: The temperature monitoring is only available for an Active Interface Module.

Remedy:

- check whether the line filter type set in p0220[0] matches the line filter that is actually connected. Ensure that the line filter specified for the infeed being used is connected or correct the setting of the line filter type in P0220[0].
- temperature monitoring is mandatory for AIM line filters (refer to P0220). Ensure that the line filter temperature switch is correctly and reliably connected to input X21 of the infeed.
- reduce the ambient temperature of the line filter.
- reduce the load on the infeed and the filter module.
- check the magnitude of the line supply voltage.
- the internal fan of the filter module is defective. Replace the fan if necessary.
- defective temperature switch of the filter module. Replace the filter module if necessary.

F06262 Infeed: Temperature switch in the line filter open when powering up

Message value: -

Drive object: A_INF, S_INF

Reaction: OFF2 (OFF1)

Acknowledge: IMMEDIATELY

Cause: When powering up the infeed, the temperature in the line filter is too high. Powering up is prevented.

Remedy:

- check whether the line filter type set in p0220[0] matches the line filter that is actually connected. Ensure that the line filter specified for the infeed being used is connected or correct the setting of the line filter type in P0220[0].
- temperature monitoring is mandatory for AIM line filters (refer to P0220). Ensure that the line filter temperature switch is correctly and reliably connected to input X21 of the infeed.
- the filter temperature is too high. Allow the system to cool down.
- the internal fan of the filter module is defective. Replace the fan if necessary.
- defective temperature switch of the filter module. Replace the filter module if necessary.

F06300 Infeed: Line voltage too high at power on

Message value: %1

Drive object: A_INF, S_INF

Reaction: OFF2 (NONE, OFF1)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The RMS line supply voltage V_{rms} was so high when powering up that controlled operation is not possible without exceeding the permissible maximum voltage in the DC link (p0280).
 Fault condition: $V_{rms} * 1.5 > p0280$.
 Fault value (r0949, floating point):
 Lowest possible controlled DC link voltage for the line supply voltage presently connected.
 See also: p0280 (DC link voltage maximum steady-state)

Remedy:

- check the line supply voltage
- check the maximum DC link voltage and if required, increase (p0280).
- check the line supply voltage and compare with the actual line supply voltage (p0210).
- check whether the power unit is dimensioned for the line supply voltage actually being used.

See also: p0210 (Drive unit line supply voltage), p0280 (DC link voltage maximum steady-state)

A06301 (F) Infeed: Line supply overvoltage

Message value: Line supply voltage: %1

Drive object: A_INF, B_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: The filtered (steady-state) value of the rms line supply voltage V_{rms} is higher than the alarm threshold (p0281).
 Alarm condition: $V_{rms} > p0281 * p0210$.
 Alarm value (r2124, floating point):
 Actual steady-state line supply voltage.
 See also: p0281 (Line supply overvoltage, alarm threshold)

Remedy:

- check the line supply.
- check the line supply voltage (p0210).
- check the alarm threshold (p0281).

See also: p0210 (Drive unit line supply voltage), p0281 (Line supply overvoltage, alarm threshold)

Reaction upon F: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

F06310 (A)	Infeed: Supply voltage (p0210) incorrectly parameterized
Message value:	Line supply voltage: %1
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	After pre-charging was completed, the line supply voltage V_{rms} was calculated using the measured DC link voltage. This voltage V_{rms} is not within the tolerance range of the supply voltage. The following applies for the tolerance range: $85 \% * p0210 < V_{rms} < 110 \% * p0210$. Alarm value (r2124, floating point): Line supply voltage V_{rms} present. See also: p0210 (Drive unit line supply voltage)
Remedy:	- check the parameterized supply voltage and if required change (p0210). - check the line supply voltage. See also: p0210 (Drive unit line supply voltage)
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F06310 (A)	Supply voltage (p0210) incorrectly parameterized
Message value:	-
Drive object:	SERVO
Reaction:	NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	For AC/AC drive units, the measured DC voltage lies outside the tolerance range after pre-charging has been completed. The following applies for the tolerance range: $1.16 * p0210 < r0070 < 1.6 * p0210$. The fault can only be acknowledged when the drive is powered down. See also: p0210 (Drive unit line supply voltage)
Remedy:	- check the parameterized supply voltage and if required change (p0210). - check the line supply voltage. See also: p0210 (Drive unit line supply voltage)
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F06310 (A)	Supply voltage (p0210) incorrectly parameterized
Message value:	-
Drive object:	VECTOR
Reaction:	NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	For AC/AC drive units, the measured DC voltage lies outside the tolerance range after pre-charging has been completed: $1.16 * p0210 < r0070 < 1.6 * p0210$. The fault can only be acknowledged when the drive is powered down. See also: p0210 (Drive unit line supply voltage)
Remedy:	- check the parameterized supply voltage and if required change (p0210). - check the line supply voltage. See also: p0210 (Drive unit line supply voltage)

Acknowl. upon A:	NONE

F06311 Infeed: Supply voltage (p0210) incorrect

Message value: Line supply voltage: %1
Drive object: A_INF, B_INF, S_INF
Reaction: OFF2 (OFF1)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The line voltage nominal value indicated in p0210 is outside the nominal voltage range of the power unit.
After pre-charging was completed, the current line supply voltage Vrms was calculated using the measured DC link voltage. This voltage Vrms does not lie within the extended tolerance range of the supply voltage set in p0210.
The following applies for the extended tolerance range: $75 \% * p0210 < Vrms < 120 \% * p0210$
Alarm value (r2124, floating point):
Line supply voltage Vrms present.
See also: p0210 (Drive unit line supply voltage)
Remedy: - check the parameterized supply voltage and if required change (p0210).
- check the line supply voltage.
See also: p0210 (Drive unit line supply voltage)

F06320 Master/slave: 4-channel multiplexer control not valid

Message value: %1
Drive object: A_INF
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Values 0, 1, 2, and 3 are valid to control the 4-channel multiplexer via connector input 3572.
In this case, an invalid value was identified. The control remains effective with the previous value.
Fault value (r0949, interpret decimal):
Invalid value to control the multiplexer.
See also: p3572 (Master/slave active current setpoint, multiplexer selection)
Remedy: - check the interconnection to control the multiplexer (CI: p3572).
- check the signal source signal value of the BICO interconnection.
See also: p3572 (Master/slave active current setpoint, multiplexer selection)

F06321 Master/slave: 6-channel multiplexer control not valid

Message value: %1
Drive object: A_INF
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Values 0, 1, 2, 3, 4 and 5 are valid to control the 6-channel multiplexer via CI: 3577. In this case, an invalid value was identified. The control remains effective with the previous value.
Fault value (r0949, interpret decimal):
Invalid value to control the multiplexer.
See also: p3577 (Master/slave current distribution factor, multiplexer selection)
Remedy: - check the interconnection to control the multiplexer (CI: p3577).
- check the signal source signal value of the BICO interconnection.
See also: p3577 (Master/slave current distribution factor, multiplexer selection)

A06350 (F)	Infeed: Measured line frequency too high
Message value:	Line frequency: %1
Drive object:	A_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The actual line frequency f_{line} is higher than the parameterized alarm threshold ($f_{line} > p0211 * p0284$). The alarm can be output in two operating states: 1. During the power-on phase of the infeed unit. Consequence: Synchronization of the infeed to the line supply is interrupted and is restarted. 2. While the infeed is operational. Consequence: The infeed remains in the operating (run) state and alarm A6350 is output. This signifies a critical operational fault. Alarm value (r2124, floating point): Actual line frequency determined. See also: p0284 (Line supply frequency exceeded, alarm threshold)
Remedy:	- check the parameterized line frequency and if required change (p0211). - check the alarm threshold (p0284). - check the line supply. - check the line supply quality. See also: p0211 (Rated line freq), p0284 (Line supply frequency exceeded, alarm threshold)
Reaction upon F:	NONE (OFF1, OFF2)
Acknowled. upon F:	IMMEDIATELY (POWER ON)
A06351 (F)	Infeed: Measured line frequency too low
Message value:	Line frequency: %1
Drive object:	A_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The actual line frequency f_{line} is lower than the parameterized alarm threshold ($f_{line} < p0211 * p0285$). The alarm can be output in two operating states: 1. During the power-on phase of the infeed unit. Consequence: Synchronization of the infeed to the line supply is interrupted and is restarted. 2. While the infeed is operational. Consequence: The infeed remains in the operating (run) state and alarm A06351 is output. This signifies a critical operational fault. Alarm value (r2124, floating point): Actual line frequency determined. See also: p0285 (Line supply frequency undershot, alarm threshold)
Remedy:	- check the parameterized line frequency and if required change (p0211). - check the alarm threshold (p0285). - check the line supply. - check the line supply quality. See also: p0211 (Rated line freq), p0285 (Line supply frequency undershot, alarm threshold)
Reaction upon F:	NONE (OFF1, OFF2)
Acknowled. upon F:	IMMEDIATELY (POWER ON)
A06400	Infeed: Line supply data identification selected/active
Message value:	-
Drive object:	A_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The line supply data identification is selected and active. The line inductance and the DC link capacitance are measured at the next pulse enable. See also: p3410 (Infeed identification method)
Remedy:	No remedial action required.

A06401	Infeed: Transformer data identification/test mode selected/active
Message value:	%1
Drive object:	A_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	A transformer data identification type or a transformer test mode has been selected or is active. Alarm value (r2124, interpret decimal): 11: Identification type 1 selected for transformer data (automatic determination of the magnetizing inductance). 12: Identification type 2 selected for transformer data (automatic determination of transformer phase shift and gain correction). 13: Identification type 3 selected for transformer data (determination of total leakage inductance of transformer during line data identification). 101: Test mode 1 selected. 102: Test mode 2 selected. See also: p5480 (Transformer magnetization mode)
Remedy:	No remedial action required. The alarm automatically disappears after identification has stopped.

F06500	Infeed: Line synchronization not possible
Message value:	-
Drive object:	A_INF, S_INF
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The line synchronization is not possible within the monitoring time. The infeed was re-synchronized to the line supply because it was interrupted due to a line frequency that was determined to be either too low or too high. After 20 attempts, synchronization - and therefore also the power-on operation - were interrupted.
Remedy:	- check the parameterized line frequency and if required change (p0211). - check the setting of the threshold values (p0284, p0285). - check the line supply. - when a Voltage Sensing Module (VSM) is used: check the line supply to the VSM terminals X521 or X522. - check the line supply quality. See also: p0211 (Rated line freq), p0284 (Line supply frequency exceeded, alarm threshold), p0285 (Line supply frequency undershot, alarm threshold)

A06502 (F, N)	Infeed: Unable to achieve line synchronization in transformer magnetization
Message value:	-
Drive object:	A_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	Line synchronization is not possible within the monitoring time (p5481[2]).
Remedy:	- check the setting of the threshold value (p5485) - check the setting of the maximum time (p5481[2]) - check the line supply quality. See also: p5481 (Transformer magnetization ramp-up time/bounce time/timeout), p5485 (Transf magnetization voltage threshold)
Reaction upon F:	NONE (OFF1, OFF2)
Acknowl. upon F:	IMMEDIATELY
Reaction upon N:	NONE
Acknowl. upon N:	NONE

A06601 (F)	Infeed: Current offset measurement interrupted
Message value:	%1
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	Defective current measurement or a DC current is present during the offset measurement. Alarm value (r2124, interpret decimal): 1: Excessively high phase current has occurred during the current offset calibration. 2: The measured current offset is greater than the 3% of the maximum permissible converter current (e.g. due to a ground fault in the DC link).
Remedy:	Re alarm value = 1: - possible counter-measure if there is no line contactor: Power up an adequately long time before OFF1 = 1. Re alarm value = 2: - defective current measurement or a DC current is present during the offset measurement. - check the DC link for a ground fault.
Reaction upon F:	NONE (OFF1, OFF2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
A06602 (F)	Infeed: Current offset measurement not possible
Message value:	-
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	After an OFF1 = 1 no valid current offset measurement was able to be made within the monitoring time (p3491) before closing the line contactor. The current offset is set to 0. See also: p3491 (Infeed I-offset measurement monitoring time)
Remedy:	- check the DC link for a ground fault. A ground fault can destroy parts and components! - Check the monitoring time setting and if required increase (p3491). At least 100 ms is required for a valid measurement (p3491 > 100 ms). Notice: If there is no valid measurement, then under certain circumstances the quality of the DC link control will be reduced. See also: p3491 (Infeed I-offset measurement monitoring time)
Reaction upon F:	NONE (OFF1, OFF2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
F06700 (A)	Infeed: Switch line contactor for load condition
Message value:	-
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	For an ON command, the infeed line contactor should be switched under load.
Remedy:	- do not load the DC link if the infeed has not issued an operating signal (r0863.0 = 1). - after the infeed has been powered down, all power units connected to the DC link should be powered down. To realize this, the operating signal of the infeed (r0863.0) must be suitably interconnected.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

A06800 (F) Infeed: Maximum steady-state DC link voltage reached

Message value: -

Drive object: A_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: The DC link voltage setpoint has reached the maximum steady-state voltage parameterized in p0280. The DC link voltage is increased by the modulation depth reserve controller for the following reasons:

- modulation depth reserve is too low (p3480).
- line supply voltage is too high.
- supply voltage (p0210) parameterized to be too low.
- excessively high setpoint for the reactive line current.

Remedy:

- check the line supply voltage setting (p0210).
- check the line supply for an overvoltage condition.
- reduce the modulation depth reserve (p3480).
- reduce the reactive current setpoint.

See also: p0210 (Drive unit line supply voltage), p0280 (DC link voltage maximum steady-state), p3480 (Infeed modulation depth limit)

Reaction upon F: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

A06810 (F) Infeed: DC link voltage alarm threshold

Message value: -

Drive object: A_INF, B_INF, S_INF

Reaction: NONE

Acknowledge: NONE

Cause: In operation, the DC link voltage has dropped to below the alarm threshold. The alarm threshold is obtained from the sum of p0279 and r0296. Possible causes include:

- line supply voltage dip or another line supply fault.
- overload of the infeed.
- for ALM: Incorrect controller parameterization.

See also: p0279 (DC link voltage offset alarm threshold), r0296 (DC link voltage undervoltage threshold)

Remedy:

- check the line voltage and line supply quality.
- reduce the power drawn, avoid step-like load changes
- for ALM: Adapt the controller parameterization, e.g. using an automatic line supply identification (p3410 = 4, 5).

Reaction upon F: NONE (OFF1, OFF2)

Acknowl. upon F: IMMEDIATELY (POWER ON)

F06850 Infeed: Short-circuit prevailing for too long

Message value: -

Drive object: A_INF

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The maximum permissible duration (p5458[1]) for the short-circuit has been exceeded. The short-circuit could not be cleared within this time.

Remedy:

- check the minimum time parameter setting (p5458[1]).
- check the line supply and fuses.

See also: p5458 (Current hysteresis controller minimum time operating state)

F06855	Infeed: Threshold value violation in line filter
Message value:	%1
Drive object:	A_INF
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A threshold set in p3678 was exceeded in the line filter for a time set in p3679. Fault value: 0: Violation of voltage threshold value 1: Violation of current threshold value See also: p3678 (Filter monitoring threshold values), p3679 (Filter monitoring minimum times)
Remedy:	
A06860	Infeed: Function module activation not possible
Message value:	-
Drive object:	A_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	Function module activation is not possible. The power unit used does not have a "gating unit with current limitation control" (p0192.19). The affected function module is identified in fault code r0949 (the value of r0949 corresponds to the bit of parameter p0108). r0949=7 "Fault ride-through" function module r0949=12 "Line droop control" function module See also: r0192 (Power unit firmware properties), p5401 (Line droop control activation)
Remedy:	- check whether the power unit used has a "gating unit with current limitation control" (p0192.19). - if the power unit used does not have a "gating unit with current limitation control" replace it with a power unit which does have a "gating unit with current limitation control".
A06900 (F)	Braking Module: Fault (1 -> 0)
Message value:	%1
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The Braking Module signals a fault (1 -> 0) via X21.4 ("booksize" format) or terminal X21.5 ("chassis" format). This signal is interconnected via binector input BI: p3866[0...7]. See also: p3866 (Braking Module fault)
Remedy:	- reduce the number of braking operations. - check binector input BI: p3866[0...7] and the wiring from terminal X21.4 ("booksize" format) or terminal X21.5 ("chassis" format).
Reaction upon F:	NONE (OFF2)
Acknowl. upon F:	IMMEDIATELY
A06901	Braking Module: Pre-alarm I2t shutdown
Message value:	%1
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The Braking Module signals "Pre-alarm I2t shutdown" via terminal X21.3. This signal is interconnected via binector input p3865[0...7]. Note: The pre-alarm I2t shutdown is only possible for "booksize" formats. This function is not supported for "chassis" formats.
Remedy:	- reduce the number of braking operations. - check binector input BI: p3865[0...7] and the wiring from terminal X21.3 of the particular Braking Module.

A06904 (N)	Braking Module internal is inhibited
Message value:	%1
Drive object:	B_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The internal Braking Module was inhibited via the binector input BI: p3680 = 1 signal. In the inhibited state, energy cannot be dissipated using the braking resistor. See also: p3680 (Braking Module internal inhibit)
Remedy:	Release the internal Braking Module (BI: p3680 = 0 signal).
Reaction upon N:	NONE
Acknowl. upon N:	NONE

A06905	Braking Module internal I2t shutdown alarm
Message value:	%1
Drive object:	B_INF
Reaction:	NONE
Acknowledge:	NONE
Cause:	The internal Braking Module outputs an alarm due to the high I2t value. 80% of the maximum switch-on duration of the braking resistor has been reached. Note: This message is also displayed via BO: p3685. See also: r3685 (Digital Braking Module: Pre-alarm I2t shutdown)
Remedy:	Reduce the number of braking operations.

F06906 (A)	Braking Module internal fault
Message value:	%1
Drive object:	B_INF
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The internal Braking Module outputs a fault due to overcurrent or an excessively high I2t value and is therefore inhibited. Note: This message is also displayed via BO: p3686. Fault value (r0949, interpret bitwise binary): Bit 0 = 1: I2t exceeded Bit 1 = 1: overcurrent See also: r3686 (Digital Braking Module Fault)
Remedy:	Reduce the number of braking operations.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F06907	Braking Module internal overtemperature
Message value:	-
Drive object:	B_INF
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	The temperature sensor connected to the braking resistor signals an overtemperature. The Braking Module is still active. If the overtemperature continues for an additional 60s, the Braking Module is shut down (F6908). See also: r3687 (Digital Braking Module pre-alarm overtemperature)
Remedy:	- reduce the temperature at the sensor. - check the temperature sensor connection.

F06908	Braking Module internal shutdown due to overtemperature
Message value:	-
Drive object:	B_INF
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY
Cause:	Shutdown of the Braking Module due to overtemperature at the temperature sensor of the braking resistor for more than 60s. See also: r3688 (Digital Braking Module fault overtemperature)
Remedy:	- reduce the temperature at the sensor. - check the temperature sensor connection.
F06909	Braking Module internal Vce fault
Message value:	%1
Drive object:	B_INF
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Trip due to Vce fault. Collector emitter voltage dip (Vce) See also: r3689 (Digital Braking Module Vce fault)
Remedy:	- Power ON - replace the unit.
F07011	Drive: Motor overtemperature
Message value:	%1
Drive object:	SERVO
Reaction:	OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	KTY: The motor temperature has exceeded the fault threshold (p0605) or the timer (p0606) after the alarm threshold was exceeded (p0604) has expired. The response parameterized in p0610 becomes active. PTC: The response threshold of 1650 Ohm was exceeded and the timer (p0606) has expired. The response parameterized in p0610 becomes active. Possible causes: - motor is overloaded. - motor ambient temperature too high. - wire breakage or sensor not connected. Fault value (r0949, interpret decimal): With SME (p0601 = 10), TM120 (p0601 = 11) selected, the number of the sensor channel leading to the message. When the I2t motor model is activated (p0612 bit[0] = yes, p0611 > 0), fault value= 200 refers to the fact that the fault has been triggered by the I2t motor model. See also: p0604 (Motor temperature alarm threshold), p0605 (Motor temperature fault threshold), p0606 (Motor temperature timer), p0610 (Motor overtemperature response)
Remedy:	- reduce the motor load. - check the ambient temperature. - check the wiring and sensor connector. See also: p0604 (Motor temperature alarm threshold), p0605 (Motor temperature fault threshold), p0606 (Motor temperature timer)

F07011	Drive: Motor overtemperature
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	KTY or no sensor: The measured motor temperature or model temperature has exceeded the fault threshold (p0605) or the timer (p0606) has elapsed following the alarm threshold (p0604) being exceeded. The response parameterized in p0610 becomes active. PTC or bimetallic NC contact: The response threshold of 1650 Ohm was exceeded or the NC contact opened and the timer (p0606) has expired. The response parameterized in p0610 becomes active. Possible causes: - motor is overloaded. - motor ambient temperature too high. - wire breakage or sensor not connected. Fault value (r0949, interpret decimal): With SME (p0601 = 10), TM120 (p0601 = 11) selected, the number of the sensor channel leading to the message. When the I2t motor model is activated (p0612 bit[0] = yes, p0611 > 0), fault value= 200 refers to the fact that the fault has been triggered by the I2t motor model. See also: p0604 (Motor temperature alarm threshold), p0605 (Motor temperature fault threshold), p0606 (Motor temperature timer), p0610 (Motor overtemperature response)
Remedy:	- reduce the motor load. - check the ambient temperature. - check the wiring and sensor connector. See also: p0604 (Motor temperature alarm threshold), p0605 (Motor temperature fault threshold), p0606 (Motor temperature timer)
A07012 (N)	Drive: I2t motor model overtemperature
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The thermal I2t motor model (for synchronous motors) identified that the temperature alarm threshold was exceeded. See also: r0034 (Motor utilization), p0605 (Motor temperature fault threshold), p0611 (I2t motor model thermal time constant)
Remedy:	- check the motor load and if required, reduce. - check the motor ambient temperature. - check the thermal time constant p0611. - check the overtemperature fault threshold p0605 (= alarm threshold for the I2t motor model, see p0612)
Reaction upon N:	NONE
Acknowled. upon N:	NONE
A07015	Drive: Motor temperature sensor alarm
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	An error was detected when evaluating the temperature sensor set in p0600 and p0601. With the fault, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 0.2 s after alarm A07015. Possible causes: - wire breakage or sensor not connected (KTY: R > 1630 Ohm). - measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm). Alarm value (r2124, interpret decimal): With SME (p0601 = 10), TM120 (p0601 = 11) selected, the number of the sensor channel leading to the message.
Remedy:	- make sure that the sensor is connected correctly. - check the parameterization (p0600, p0601). See also: r0035, p0600, p0601, p0607

F07016	Drive: Motor temperature sensor fault
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	An error was detected when evaluating the temperature sensor set in p0600 and p0601. Possible causes: - wire breakage or sensor not connected (KTY: R > 1630 Ohm). - measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm). Note: If alarm A07015 is present, the time in p0607 is started. If the fault is still present after this time has expired, then fault F07016 is output; however, at the earliest, 0.2 s after alarm A07015. Fault value (r0949, interpret decimal): With SME (p0601 = 10), TM120 (p0601 = 11) selected, the number of the sensor channel leading to the message. See also: p0607 (Temperature sensor fault timer)
Remedy:	- make sure that the sensor is connected correctly. - check the parameterization (p0600, p0601). - induction motors: Deactivate temperature sensor fault (p0607 = 0). See also: r0035, p0600, p0601, p0607
F07080	Drive: Incorrect control parameter
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The closed-loop control parameters have been parameterized incorrectly (e.g. p0356 = L_spread = 0). Fault value (r0949, interpret decimal): The fault value includes the parameter number involved. The following parameter numbers only occur as fault values for vector drives: p0310, for synchronous motors: p0341, p0344, p0350, p0357 The following parameter numbers do not occur as fault values for synchronous motors: p0354, p0358, p0360 See also: p0310, p0311, p0341, p0344, p0350, p0354, p0356, p0357, p0358, p0360, p0400, p0404, p0408, p0640, p1082, p1300
Remedy:	Modify the parameter indicated in the fault value (r0949) (e.g. p0640 = current limit > 0). See also: p0311, p0341, p0344, p0350, p0354, p0356, p0358, p0360, p0400, p0404, p0408, p0640, p1082
F07082	Macro: Execution not possible
Message value:	Fault cause: %1, supplementary information: %2, preliminary parameter number: %3
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The macro cannot be executed. Fault value (r0949, interpret hexadecimal): ccccbaa hex: cccc = preliminary parameter number, bb = supplementary information, aa = fault cause Fault causes for the trigger parameter itself: -19: Called file is not valid for the trigger parameter. -20: Called file is not valid for parameter 15. -21: Called file is not valid for parameter 700. -22: Called file is not valid for parameter 1000. -23: Called file is not valid for parameter 1500. -24: Data type of a TAG is incorrect (e.g.: Index, number or bit is not U16). Fault causes for the parameters to be set: -25: Error level has an undefined value. -26: Mode has an undefined value. -27: A value was entered as string in the tag value that is not "DEFAULT". -31: Entered drive object type unknown. -32: A device was not able to be found for the determined drive object number.

- 34: A trigger parameter was recursively called.
- 35: It is not permissible to write to the parameter via macro.
- 36: Check, writing to a parameter unsuccessful, parameter can only be read, not available, incorrect data type, value range or assignment incorrect.
- 37: Source parameter for a BICO interconnection was not able to be determined.
- 38: An index was set for a non-indexed (or CDS-dependent) parameter.
- 39: No index was set for an indexed parameter.
- 41: A bit operation is only permissible for parameters with the parameter format DISPLAY_BIN.
- 42: A value not equal to 0 or 1 was set for a BitOperation.
- 43: Reading the parameter to be changed by the BitOperation was unsuccessful.
- 51: Factory setting for DEVICE may only be executed on the DEVICE.
- 61: The setting of a value was unsuccessful.

Remedy:

- check the parameter involved.
- check the macro file and BICO interconnection.

See also: p0015, p0700, p1000, p1500

F07083 Macro: ACX file not found

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The ACX file (macro) to be executed was not able to be found in the appropriate directory.
Fault value (r0949, interpret decimal):
Parameter number with which the execution was started.
See also: p0015, p0700, p1000, p1500
Remedy: - check whether the file is saved in the appropriate directory on the memory card.
Example:
If p0015 is set to 1501, then the selected ACX file must be located in the following directory:
... /PMACROS/DEVICE/P15/PM001501.ACX

F07084 Macro: Condition for WaitUntil not fulfilled

Message value: Parameter: %1
Drive object: All objects
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The WaitUntil condition set in the macro was not fulfilled in a certain number of attempts.
Fault value (r0949, interpret decimal):
Parameter number for which the condition was set.
Remedy: Check and correct the conditions for the WaitUntil loop.

F07085 Drive: Open-loop/closed-loop control parameters changed

Message value: Parameter: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Open-loop/closed-loop control parameters have had to be changed because:
1) They have exceeded dynamic limits because of other parameters, or
2) They cannot be used due to the hardware detected not having certain properties.
Fault value (r0949, interpret decimal):
The fault value includes the modified parameter number.
340: The motor and control parameters were automatically calculated (p0340 = 1), because the vector control was subsequently activated as configuration (r0108.2).
See also: p0640, p1082, p1300, p1800
Remedy: It is not necessary to change the parameters as they have already been correctly limited.

F07086	Units changeover: Parameter limit violation due to reference value change
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A reference parameter was changed in the system. This resulted in the fact that for the parameters involved, the selected value was not able to be written in the per unit representation (cause: e.g. the steady-state minimum/maximum limit or that defined in the application was violated). The values of the parameters were set to the corresponding violated minimum/maximum limit or to the factory setting. Fault value (r0949, parameter): Diagnostics parameter r9450 to display the parameters that were not able to be recalculated. See also: p0304, p0305, p0310, p0596, p2000, p2001, p2002, p2003, r2004
Remedy:	Check the adapted parameter value and if required correct. See also: r9450 (Reference value change parameter with unsuccessful calculation)
F07087	Drive: Encoderless operation not possible for the selected pulse frequency
Message value:	Parameter: %1
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	Encoderless operation is not possible for the selected pulse frequency (p1800). Encoderless operation is activated under the following conditions: - the changeover speed for encoderless operation (p1404) is less than the maximum speed (p0322). - a control type with encoderless operation has been selected (p1300). - encoder faults of the motor encoder result in a fault response with encoderless operation (p0491). See also: p0491, p1300, p1404, p1800
Remedy:	Increase the pulse frequency (p1800). Note: In encoderless operation, the pulse frequency must be at least as high as half the current controller clock cycle (1/p0115[0]).
F07088	Units changeover: Parameter limit violation due to units changeover
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A changeover of units was initiated. Possible causes for the violation of a parameter limit are: - when rounding off a parameter corresponding to its decimal places, the steady-state minimum or maximum limit was violated. - inaccuracies for the data type "Floating Point". In these cases, when the minimum limit is violated then the parameter value is rounded up and when the maximum limited is violated the parameter value is rounded down. Fault value (r0949, interpret decimal): Diagnostics parameter r9451 to display all parameters whose value had to be adapted. See also: p0100 (IEC/NEMA mot stds), p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units), p0595 (Selecting technological units)
Remedy:	Check the adapted parameter values and if required correct. See also: r9451 (Units changeover adapted parameters)

A07089	Changing over units: Function module activation is blocked because the units have been changed over
Message value:	-
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	An attempt was made to activate a function module. This is not permissible if the units have already been changed over. See also: p0100 (IEC/NEMA mot stds), p0349 (System of units, motor equivalent circuit diagram data), p0505 (Selecting the system of units)
Remedy:	Restore units that have been changed over to the factory setting.

F07090	Drive: Upper torque limit less than the lower torque limit
Message value:	-
Drive object:	SERVO
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The upper torque limit is lower than the lower torque limit.
Remedy:	P1 must be >= P2 if parameter P1 is connected to p1522 and parameter P2 to p1523.

F07100	Drive: Sampling times cannot be reset
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	When resetting drive parameter (p0976) sampling times cannot be reset using p0111, p0112, p0115. Fault value (r0949, interpret decimal): Parameter whose setting prevents the sampling times being reset. See also: r0110 (Basic sampling times)
Remedy:	- continue to work with the set sampling times. - before resetting the drive parameters, set the basic clock cycle p0110[0] to the original value. See also: r0110 (Basic sampling times)

F07110	Drive: Sampling times and basic clock cycle do not match
Message value:	Parameter: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The parameterized sampling times do not match the basic clock cycle. Fault value (r0949, interpret decimal): The fault value specifies the parameter involved. See also: r0110, r0111, p0115
Remedy:	Enter the current controller sampling times so that they are identical to the basic clock cycle, e.g. by selecting p0112. Note which basic clock cycle is selected in p0111. The sampling times in p0115 can only be changed manually in the sampling times presetting "Expert" (p0112). See also: r0110, r0111, p0112, p0115

A07200	Drive: Master control ON/OFF1 command present
Message value:	-
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The ON/OFF1 command is not 0, either via binector input p0840 (current CDS) or in control word bit 0 via the master control.
Remedy:	Both the signal at binector input p0840 (current CDS) and bit 0 via the master control must be 0.

F07220 (N, A)	Drive: Master control by PLC missing
Message value:	-
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: OFF1 (NONE, OFF2, OFF3, STOP1, STOP2) Vector: OFF1 (NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The "master control by PLC" signal was missing in operation. - interconnection of the binector input for "master control by PLC" is incorrect (p0854). - the higher-level control has withdrawn the "master control by PLC" signal. - data transfer via the fieldbus (master/drive) was interrupted.
Remedy:	- check the interconnection of the binector input for "master control by PLC" (p0854). - check the "master control by PLC" signal and, if required, switch in. - check the data transfer via the fieldbus (master/drive). Note: If the drive should continue to operate after withdrawing "master control by PLC" then fault response must be parameterized to NONE or the message type should be parameterized as alarm.
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F07300 (A)	Drive: Line contactor feedback signal missing
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	- the line contactor was not able to be closed within the time in p0861. - the line contactor was not able to be opened within the time in p0861. - the line contactor dropped out during operation - the line contactor has closed although the drive converter is powered down.
Remedy:	- check the setting of p0860. - check the feedback circuit from the line contactor. - increase the monitoring time in p0861. See also: p0860 (Line cont. fdbk sig), p0861 (Line contactor monitoring time)
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F07311	Bypass motor switch
Message value:	Fault cause: %1 bin
Drive object:	VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Fault value: Bit field BYPASS_CONTACTOR_ERROR_STATE Bit 1 BYPASS_CONTACTOR_ERR_FBK_ON_MISSING Switch "Closed" feedback signal missing Bit 2 BYPASS_CONTACTOR_ERR_FBK_OFF_MISSING Switch "Open" feedback signal missing Bit 3 BYPASS_CONTACTOR_ERR_TOO_SLOW Switch feedback signal too slow: After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.

Bit 6
 BYPASS_CONTACTOR_ERR_BYPASS_INCONSISTENCY
 Drive switch feedback signal is not consistent with the bypass state:
 When powering up or for STAGING, the drive switch is closed.
 See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)

Remedy:

- check the transfer of the feedback signals.
- check the switch.

F07312 Bypass LSS:

Message value: Fault cause: %1 bin
Drive object: VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Fault value: Bit field BYPASS_CONTACTOR_ERROR_STATE
 Bit 1
 BYPASS_CONTACTOR_ERR_FBK_ON_MISSING
 Switch "Closed" feedback signal missing
 Bit 2
 BYPASS_CONTACTOR_ERR_FBK_OFF_MISSING
 Switch "Open" feedback signal missing
 Bit 3
 BYPASS_CONTACTOR_ERR_TOO_SLOW
 Switch feedback signal too slow:
 After switching, the system waits for the positive feedback signal. If the feedback signal is received later than the specified time, then a fault trip (shutdown) is issued.
 Bit 6
 BYPASS_CONTACTOR_ERR_BYPASS_INCONSISTENCY
 Line Side Switch feedback signal is not consistent with the bypass state:
 When powering up or for STAGING, the Line Side Switch is closed without this having been requested from the bypass.
 See also: p1260 (Bypass configuration), r1261 (Bypass control/status word), p1266 (Bypass, control command), p1267 (Bypass changeover source configuration), p1269 (Bypass switch feedback signal), p1274 (Bypass switch monitoring time)

Remedy:

- check the transfer of the feedback signals.
- check the switch.

F07320 Drive: Automatic restart interrupted

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: - The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt.
 - there is no active ON command.
 - the monitoring time for the power unit has expired (p0857).
 - when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again.
 Fault value (r0949, interpret hexadecimal):
 Only for internal Siemens troubleshooting.

Remedy:

- increase the number of restart attempts (p1211). The actual number of starting attempts is displayed in r1214.
- increase the delay time in p1212 and/or the monitoring time in p1213.
- issue an ON command (p0840).
- either increase or disable the monitoring time of the power unit (p0857).

F07320	Drive: Automatic restart interrupted
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	- The specified number of restart attempts (p1211) has been completely used up because within the monitoring time (p1213) the faults were not able to be acknowledged. The number of restart attempts (p1211) is decremented at each new start attempt. - there is no active ON command. - the monitoring time for the power unit has expired (p0857). - when exiting commissioning or at the end of the motor identification routine or the speed controller optimization, the drive unit is not automatically powered up again. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	- increase the number of restart attempts (p1211). The actual number of starting attempts is displayed in r1214. - increase the delay time in p1212 and/or the monitoring time in p1213. - issue an ON command (p0840). - either increase or disable the monitoring time of the power unit (p0857). - Reduce the waiting time for resetting the fault counter p1213[1] so that fewer faults are registered in the time interval.
A07321	Drive: Automatic restart active
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The automatic restart (AR) is active. When the line supply returns and/or the causes of the existing faults are removed the drive is automatically restarted. The pulses are enabled and the motor starts to rotate.
Remedy:	- the automatic restart (AR) should, if required, be inhibited (p1210 = 0). - an automatic restart can be directly interrupted by withdrawing the power-on command (BI: p0840).
A07329 (N)	Drive: kT estimator, kT(iq) characteristic or voltage compensation does not function
Message value:	%1
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	A function of the function module "extended torque control" (r0108.1) was activated - however the (complete) function is not available. Fault value (r0949, interpret decimal): 1 ... 3: The kT estimator is active (p1780.3 = 1) without a functioning compensation of the voltage emulation error in the drive converter. This means that the accuracy is severely restricted. 1: The drive converter voltage emulation error "final value" is 0 (p1952). 2: The drive converter voltage emulation error "current offset" is 0 (p1953). 3: The compensation of the voltage emulation error is disabled (p1780.8 = 0). 4: The kT estimator (p1780.3 = 1), the kT(iq) characteristic (p1780.9 = 1) or the compensation of the voltage emulation error (p1780.8 = 1) was activated without activating the function module "extended torque control" (when the function module is activated, the following must apply: r0108.1 = 1).
Remedy:	Re fault value = 1, 2: - carry out an identification of the voltage emulation error in the drive converter (p1909.14 = 1, p1910 = 1). - set the parameter to compensate the voltage emulation error in the drive converter (p1952, p1953). Re fault value = 3: - enable the compensation of the voltage emulation error in the drive converter (p1780.8 = 1). Re fault value = 4: - activate the function module "extended torque control" (r0108.1 = 1) or deactivate the corresponding functions (p1780.3 = 0, p1780.8 = 0, p1780.9 = 0).
Reaction upon N:	NONE
Acknowl. upon N:	NONE

F07330	Flying restart: Measured search current too low
Message value:	-
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	During a flying restart, it was identified that the search current reached is too low. It is possible that the motor is not connected.
Remedy:	Check the motor feeder cables.

F07331	FlyRestart: Not supported
Message value:	-
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	It is not possible to power up with the motor rotating (no flying restart). In the following cases, the "flying restart" function is not supported: Permanent-magnet and separately-excited synchronous motors (PEM, FEM): Operation with V/f characteristic. Permanent-magnet synchronous motor (PEM): Encoderless operation without a Voltage Sensing Module (VSM) being connected.
Remedy:	- deactivate the "flying restart" function (p1200 = 0). - change the open-loop/closed-loop control mode (p1300). - connect a Voltage Sensing Module (VSM) (voltage measurement).

A07350 (F)	Drive: Measuring probe parameterized to a digital output
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	NONE
Cause:	The measuring probe is connected to a bi-directional digital input/output and the terminal is set as output. Alarm value (r2124, interpret decimal): 8: DI/DO 8 (X122.9/X132.1) 9: DI/DO 9 (X122.10/X132.2) 10: DI/DO 10 (X122.12/X132.3) 11: DI/DO 11 (X122.13/X132.4) 12: DI/DO 12 (X132.9) 13: DI/DO 13 (X132.10) 14: DI/DO 14 (X132.12) 15: DI/DO 15 (X132.13) To the terminal designation: The first designation is valid for CU320, the second for CU305.
Remedy:	- set the terminal as input (p0728). - deselect the measuring probe (p0488, p0489, p0580).
Reaction upon F:	OFF1
Acknowl. upon F:	IMMEDIATELY

A07400 (N)	Drive: DC link voltage maximum controller active
Message value:	-
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The DC link voltage controller has been activated because of the upper switch-in threshold (r1244). A system deviation can occur between the setpoint and actual speed. See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller or Vdc monitoring configuration)

Remedy: None necessary.
This alarm automatically disappears after the upper threshold has been distinctly undershot.
Otherwise, apply the following measures:
- use a Braking Module or regenerative feedback unit.
- increase the ramp-down times (p1121, p1135).
- shut down the Vdc_max controller (p1240 = 0).

Reaction upon N: NONE
Acknowl. upon N: NONE

A07400 (N) Drive: DC link voltage maximum controller active

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The DC link voltage controller has been activated because the upper switch-in threshold has been exceeded (r1242, r1282).
The ramp-down times are automatically increased in order to maintain the DC link voltage (r0070) within the permissible limits. There is a system deviation between the setpoint and actual speeds.
When the DC link voltage controller is switched out (disabled), this is the reason that the ramp-function generator output is set to the speed actual value.
See also: p1240 (Vdc controller or Vdc monitoring configuration), p1280 (Vdc controller or Vdc monitoring configuration (V/f))

Remedy: If the controller is not to intervene:
- increase the ramp-down times.
- shut down the Vdc_max controller (p1280 = 0).
If the ramp-down times are not to be changed:
- use a chopper or regenerative feedback unit.

Reaction upon N: NONE
Acknowl. upon N: NONE

A07401 (N) Drive: DC link voltage maximum controller deactivated

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The Vdc_max controller can no longer maintain the DC link voltage (r0070) below the limit value (r1242, r1282) and was therefore switched out (disabled).
- the line supply voltage is permanently higher than specified for the power unit.
- the motor is permanently in the regenerative mode as a result of a load that is driving the motor.

Remedy: - check whether the input voltage is within the permissible range.
- check whether the load duty cycle and load limits are within the permissible limits.

Reaction upon N: NONE
Acknowl. upon N: NONE

A07402 (N) Drive: DC link voltage minimum controller active

Message value: -
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The DC link voltage controller has been activated due to the lower switch-in threshold (r1248).
A system deviation can occur between the setpoint and actual speed.
A possible cause can be e.g. that the line supply has failed.
See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller or Vdc monitoring configuration), p1248 (DC link voltage threshold lower)

Remedy: None necessary.
This alarm automatically disappears after the lower threshold has been distinctly exceeded.
Otherwise, apply the following measures:
- check the line supply and infeed.
- increase the ramp-up times (p1120).
- shut down the Vdc_min controller (p1240 = 0).

Reaction upon N: NONE

Acknowl. upon N: NONE

A07402 (N) Drive: DC link voltage minimum controller active

Message value: -

Drive object: VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The DC link voltage controller has been activated as the lower switch-in threshold has been undershot (r1246, r1286).
The kinetic energy of the motor is used to buffer the DC link. The drive is therefore braked.
See also: r0056 (Status word, closed-loop control), p1240 (Vdc controller or Vdc monitoring configuration), p1280 (Vdc controller or Vdc monitoring configuration (V/f))

Remedy: The alarm disappears when power supply returns.

Reaction upon N: NONE

A07409	Drive: V/f control, current limiting controller active
Message value:	%1
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The current limiting controller of the V/f control was activated because the current limit was exceeded.
Remedy:	The alarm is automatically withdrawn when increasing the current limit (p0640), reducing the load or using a slower up ramp for the setpoint (reference) speed.

F07410	Drive: Current controller output limited
Message value:	-
Drive object:	SERVO
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	The condition " $I_{act} = 0$ and $U_{q_set_1}$ longer than 16 ms at its limit" is present and can be caused by the following: - motor not connected or motor contactor open. - no DC link voltage present. - Motor Module defective.
Remedy:	- connect the motor or check the motor contactor. - check the DC link voltage (r0070). - check the Motor Module.

F07410	Drive: Current controller output limited
Message value:	-
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	The condition " $I_{act} = 0$ and $U_{q_set_1}$ longer than 16 ms at its limit" is present and can be caused by the following: - motor not connected or motor contactor open. - motor data and motor configuration (star-delta) do not match. - no DC link voltage present. - power unit defective. - the "flying restart" function is not activated.
Remedy:	- connect the motor or check the motor contactor. - check the motor parameterization and the connection configuration (star-delta). - check the DC link voltage (r0070). - check the power unit. - activate the "flying restart" function (p1200).

F07411	Drive: Flux controller output limited
Message value:	-
Drive object:	SERVO
Reaction:	Servo: OFF2 (NONE, OFF1) Vector: OFF2
Acknowledge:	IMMEDIATELY
Cause:	The specified flux setpoint cannot be reached although 90% of the maximum current has been specified. - incorrect motor data. - motor data and motor configuration (star-delta) do not match. - the current limit has been set too low for the motor. - induction motor (encoderless, open-loop controlled) in I2t limiting. - the Motor Module is too small.
Remedy:	- correct the motor data. - check the motor configuration. - correct the current limits (p0640, p0323). - reduce the induction motor load. - if required, use a larger Motor Module.

F07411	Drive: Flux setpoint not reached when building up excitation
Message value:	-
Drive object:	VECTOR
Reaction:	Servo: OFF2 (NONE, OFF1) Vector: OFF2
Acknowledge:	IMMEDIATELY
Cause:	When quick magnetizing is configured (p1401.6 = 1) the specified flux setpoint is not reached although 90% of the maximum current is specified. - incorrect motor data. - motor data and motor configuration (star-delta) do not match. - the current limit has been set too low for the motor. - induction motor (encoderless, open-loop controlled) in I2t limiting. - the Motor Module is too small. - the magnetizing time p0346 is too short.
Remedy:	- correct the motor data. Perform motor data identification and rotating measurement. - check the motor configuration. - correct the current limits (p0640). - reduce the induction motor load. - if required, use a larger Motor Module. - check motor supply cable. - check power unit. - increase p0346.
F07412	Drive: Commutation angle incorrect (motor model)
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	ENCODER (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	An incorrect commutation angle was detected that can result in a positive coupling in the speed controller. Possible causes: - the motor encoder is incorrectly adjusted with respect to the magnet position. - the motor encoder is damaged. - the angular commutation offset is incorrectly set (p0431). - data to calculate the motor model has been incorrectly set (p0356 (motor-stator leakage inductance) and/or p0350 (motor-stator resistance) and/or p0352 (cable resistance)). - the changeover speed for the motor model is too low (p1752). The monitoring function only becomes effective above the changeover speed. - pole position identification might have calculated an incorrect value when activated (p1982 = 1). - the motor encoder speed signal is faulted. - the control loop is instable due to incorrect parameterization. Fault value (r0949, interpret decimal): SERVO: 0: The comparison of the pole position angle from the encoder and the motor model resulted in an excessively high value (> 80 ° electrical). 1: - VECTOR: 0: The comparison of the pole position angle from the encoder and the motor model resulted in an excessively high value (> 45 ° electrical). 1: The change in the speed signal from the motor encoder has changed by > p0492 within a current controller clock cycle.

Remedy:

- if the encoder mounting was changed - re-adjust the encoder.
- replace the defective motor encoder.
- correctly set the angular commutation offset (p0431).
- correctly set the motor stator resistance, cable resistance and motor-stator leakage inductance (p0350, p0352, p0356).
- increase the changeover speed for the motor model (p1752). The monitoring is completely deactivated for p1752 > p1082 (maximum speed).
- with pole position identification activated (p1982 = 1) check the procedure for pole position identification (p1980) and force a new pole position identification procedure by means of deselection followed by selection (p1982 = 0 -> 1).

Note:
For High Dynamic Motors (1FK7xxx-7xxx), for applications with a higher current, if necessary, the monitoring should be disabled.

F07413 Drive: Commutation angle incorrect (pole position identification)

Message value: -

Drive object: SERVO, VECTOR

Reaction: ENCODER (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: An incorrect commutation angle was detected that can result in a positive coupling in the speed controller.

- within the pole position identification routine (p1982 = 2):
A difference of > 45° electrical to the encoder angle was determined.
- for VECTOR, within the encoder adjustment (p1990 = 2):
A difference of > 6° electrical to the encoder angle was determined.

Remedy:

- correctly set the angular commutation offset (p0431).
- re-adjust the motor encoder after the encoder has been replaced.
- replace the defective motor encoder.
- check the pole position identification routine. If the pole position identification routine is not suitable for this motor type, then disable the plausibility check (p1982 = 0).

F07414 (N, A) Drive: Encoder serial number changed

Message value: -

Drive object: SERVO

Reaction: ENCODER (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause: The serial number of the motor encoder of a synchronous motor has changed. The change was only checked for encoders with serial number (e.g. EnDat encoders) and build-in motors (e.g. p0300 = 401) or third-party motors (p0300 = 2).

Cause 1:
The encoder was replaced.

Cause 2:
A third-party, build-in or linear motor was re-commissioned.

Cause 3:
The motor with integrated and adjusted encoder was replaced.

Cause 4:
The firmware was updated to a version that checks the encoder serial number.

Remedy: Re causes 1, 2:
Carry out an automatic adjustment using the pole position identification routine. Acknowledge the fault. Initiate the pole position identification routine with p1990 = 1. Then check that the pole position identification routine is correctly executed.
SERVO:
If a pole position identification technique is selected in p1980, and if p0301 does not contain a motor type with an encoder adjusted in the factory, then p1990 is automatically activated.
or
Set the adjustment via p0431. In this case, the new serial number is automatically accepted.
or
Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.
Re causes 3, 4:
Accept the new serial number with p0440 = 1.

N07415 (F) Drive: Angular commutation offset transfer running

Message value: -
Drive object: SERVO
Reaction: OFF2
Acknowledge: NONE
Cause: The angular commutation offset was automatically determined using p1990 = 1.
This fault causes the pulses to be suppressed - this is necessary to transfer the angular commutation offset to p0431.
See also: p1990 (Encoder adjustment, determine angular commutation offset)

Remedy: The fault can be acknowledged without any additional measures.

Reaction upon F: OFF2
Acknowl. upon F: IMMEDIATELY

A07416 Drive: Flux controller configuration

Message value: Parameter: %1, Index: %2, fault cause: %3
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The configuration of the flux control (p1401) is contradictory.
Alarm value (r2124, interpret hexadecimal):
ccbbaaaa hex
aaaa = Parameter
bb = Index
cc = fault cause
cc = 01 hex = 1 dec:
Quick magnetizing (p1401.6) for soft start (p1401.0).
cc = 02 hex = 2 dec:
Quick magnetizing (p1401.6) for flux build-up control (p1401.2).
cc = 03 hex = 3 dec:
Quick magnetizing (p1401.6) for Rs identification after restart (p0621 = 2).

Remedy: Re fault cause = 1:
- Shut down soft start (p1401.0 = 0).
- Shut down quick magnetizing (p1401.6 = 0).
Re fault cause = 2:
- De-energize flux build-up control (p1401.2 = 0).
- Shut down quick magnetizing (p1401.6 = 0).
Re fault cause = 3:
- Re-parameterize Rs identification (p0621 = 0, 1)
- Shut down quick magnetizing (p1401.6 = 0).

F07417	Drive: Pulse technique not plausible (motor model)
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	The evaluation of the test pulse response found incorrect values. Fault value (r0949, interpret decimal): Fault value 0: An impermissible pulse technique configuration was detected during ramp-up. Possible causes: - The pulse technique was initially selected during system ramp-up (p1750.5=1) but the power unit component does not support the current oversampling required (see r192.23). As a consequence, p1750.0 was deselected automatically. Fault value 10: The pulse response is repeatedly implausible. Possible causes: - Incorrect configuration of the power unit component - The power unit component is faulty. Fault value 20: At the preset pulse amplitude the measured pulse response is much higher than the expected value. Possible causes: - The orientation loop has been affected by major vibration phenomena. - The motor is short-circuited for high frequencies (output filter). - The motor is damaged.
Remedy:	Re fault value 0: Once the pulse technique has been deselected automatically (p1750.5=0), there are two possible options: - acknowledge the fault and save parameter p1750.5=0 => field-oriented control mode to standstill is forfeited and replaced by transition to open-loop control at low speeds. - replace the power unit firmware (at least V4.30) => field-oriented control mode to standstill is available. Re fault value 10: With active selection of the pulse technique (p1750.5) - power both the CU and the power unit component down and then back up again, or - perform a manual warm restart (see P0009, P0976). If this does not solve the problem: Replace the power unit component. Re fault value 20: - control parameters might have been adjusted (factory setting, commissioning). - filters must not be connected between motor and converter/inverter. - check the motor.
F07420	Drive: Current setpoint filter natural frequency > Shannon frequency
Message value:	%1
Drive object:	SERVO
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	One of the filter natural frequencies is greater than the Shannon frequency. The Shannon frequency is calculated according to the following formula: $0.5 / p0115[0]$ Fault value (r0949, interpret hexadecimal): Bit 0: Filter 1 (p1658, p1660) Bit 1: Filter 2 (p1663, p1665) Bit 2: Filter 3 (p1668, p1670) Bit 3: Filter 4 (p1673, p1675) Bit 8 ... 15: Data set number (starting from zero).
Remedy:	- reduce the numerator or denominator natural frequency of the current setpoint filter involved. - reduce the current controller sampling time (p0115[0]). - switch out the filter involved (p1656).

F07421	Drive: Speed setpoint filter natural frequency > Shannon frequency
Message value:	%1
Drive object:	SERVO
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	One of the filter natural frequencies is greater than the Shannon frequency. The Shannon frequency is calculated according to the following formula: $0.5 / p0115[1]$ Fault value (r0949, interpret hexadecimal): Bit 0: Filter 1 (p1417, p1419) Bit 1: Filter 2 (p1423, p1425) Bit 8 ... 15: Data set number (starting from zero)
Remedy:	- reduce the numerator or denominator natural frequency of the speed setpoint filter involved. - reduce the speed controller sampling time (p0115[1]). - switch out the filter involved (p1414).
F07422	Drive: Reference model natural frequency > Shannon frequency
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The natural filter frequency of the PT2 element for the reference model (p1433) is greater than the Shannon frequency. The Shannon frequency is calculated according to the following formula: $0.5 / p0115[1]$
Remedy:	- reduce the natural frequency of PT2 element for reference model (p1433). - reduce the speed controller sampling time (p0115[1]).
F07423	Drive: APC filter natural frequency > Shannon frequency
Message value:	%1
Drive object:	SERVO
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	One of the filter natural frequencies is greater than the Shannon frequency. The Shannon frequency is calculated according to the following formula: $0.5 / (p0115[1] * x)$ Fault value (r0949, interpret hexadecimal): Bit 0: Filter 1.1 (p3711, p3713), $x = 1$ Bit 4: Filter 2.1 (p3721, p3723), $x = p3706$ Bit 5: Filter 2.2 (p3726, p3728), $x = p3706$ Bit 8: Filter 3.1 (p3731, p3733), $x = p3707$ Bit 9: Filter 3.2 (p3736, p3738), $x = p3707$ Bit 16 ... 32: Data set number (starting from zero)
Remedy:	- reduce the numerator or denominator natural frequency of the filter involved. - reduce the speed controller sampling time (p0115[1]) or the sub-sampling (p3706, p3707). - switch out the filter involved (p3704).
A07424	Drive: Operating condition for APC not valid
Message value:	Fault cause: %1 bin
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The APC function (Advanced Positioning Control) has identified an invalid operating condition. Alarm value (r2124, interpret hexadecimal): Bit 0 = 1: APC is operating without encoder Bit 1 = 1: The load measuring system for APC, selected using p3701, has a fault. The APC function is disabled. Bit 2 = 1: The load measuring system for APC, selected using p3701, has a fault. The pulse de-coupling is disabled, i.e. the speed of the motor measuring system is used as speed for the closed-loop motor speed control.

Remedy: Re bit 0:
Only use the APC function in operation with an encoder.
Re bit 1, 2:
Check the load measuring system.

F07425 Drive: APC monitoring time for speed limit expired

Message value: -
Drive object: SERVO
Reaction: OFF1
Acknowledge: IMMEDIATELY
Cause: The limit value (p3778) for the speed/velocity was exceeded for a time longer than that set in the monitoring time (p3779).
Note:
APC: Advanced Positioning Control
Remedy: - check the measured value.
- check the limit value and monitoring time (p3778, p3779).

F07426 (A) Technology controller actual value limited

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The actual signal of the technology controller has reached its limit.
- Fault value = 1: upper limit reached
- Fault value = 2: lower limit reached
Remedy: - Adapt the limits in P2267, P2268 to the signal level.
- Check scaling of the actual signal.
See also: p2264 (Technology controller actual value), p2267 (Technology controller upper limit actual value), p2268 (Technology controller lower limit actual value)
Reaction upon A: NONE
Acknowl. upon A: NONE

F07429 Drive: DSC without encoder not possible

Message value: -
Drive object: SERVO
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The function DSC (Dynamic Servo Control) was activated although there is no encoder.
See also: p1191 (DSC position controller gain KPC)
Remedy: If there is no encoder and connector input p1191 (DSC position controller gain) is interconnected, then connector input p1191 must have a 0 signal.

F07430 Drive: Changeover to open-loop torque controlled operation not possible

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: For encoderless operation, the converter cannot change over to closed-loop torque-controlled operation (BI: p1501).
Remedy: Do not attempt to cover over to closed-loop torque-controlled operation.

F07431	Drive: Changeover to encoderless operation not possible
Message value:	-
Drive object:	SERVO
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY
Cause:	For closed-loop torque control, the converter cannot change over to encoderless operation (p1404).
Remedy:	Do not attempt to change over to encoderless operation.
F07432	Drive: Synchronous motor without overvoltage protection
Message value:	%1
Drive object:	SERVO
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY
Cause:	Under voltage conditions, a synchronous motor can generate an overvoltage condition that can destroy the drive system. Fault value (r0949, interpret hexadecimal): Associated Drive Data Set (DDS).
Remedy:	Overvoltage protection can be implemented in the following ways: - limit the maximum speed (p1082) without any additional protection. The maximum speed without protection is calculated as follows: Rotary motors: $p1082 \text{ [rpm]} \leq 11.695 * p0297/p0316 \text{ [Nm/A]}$ Linear motors: $p1082 \text{ [m/min]} \leq 73.484 * p0297/p0316 \text{ [N/A]}$ - use a voltage protection module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801). When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM. When using a VPM, p0643 must be set to 1. - activating the internal voltage protection (IVP) with p1231 = 3. See also: p0643 (Overvoltage protection for synchronous motors), p1231 (Armature short-circuit / DC brake configuration)
F07433	Drive: Closed-loop control with encoder is not possible as the encoder has not been unparked
Message value:	%1
Drive object:	SERVO
Reaction:	NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The changeover to closed-loop control with encoder is not possible as the encoder has not been unparked.
Remedy:	- check whether the encoder firmware supports the "parking" function (r0481.6 = 1). - upgrade the firmware. Note: For long-stator motors (p3870.0 = 1), the following applies: The encoder must have completed the unparking procedure (r3875.0 = 1) before a changeover can be made to closed-loop control with encoder. The encoder is unparked with a 0/1 edge at BI: p3876 and remains unparked until a 0 signal is again present.
F07434	Drive: It is not possible to change the direction of rotation with the pulses enabled
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A drive data set was selected - with the pulses enabled - which has a different parameterized direction of rotation (p1821). It is only possible to change the motor direction of rotation using p1821 when the pulses are inhibited.
Remedy:	- change over the drive data set with the pulses inhibited. - ensure that the changeover to a drive data set does not result in the motor direction of rotation being changed (i.e. for these drive data sets, the same value must be in p1821). See also: p1821

F07435 (N)	Drive: Setting the ramp-function generator for encoderless vector control
Message value:	Parameter: %1
Drive object:	VECTOR
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	During operation with encoderless vector control (r1407.1) the ramp-function generator was stopped (p1141) or bypassed (p1122). An internal setting command of the ramp-function generator output caused the set setpoint speed to be frozen or was not able to be realized.
Remedy:	- deactivate the holding command for the ramp-function generator (p1141). - do not bypass the ramp-function generator (p1122). - suppress the fault (p2101, p2119). This is necessary if the ramp-function generator is held using jogging and the speed setpoint is simultaneously inhibited (r0898.6). Note: For encoderless vector control it is not practical to read-in the main setpoint of the speed control via p1155 or p1160 (p0922). In this case, the main setpoint should be injected before the ramp-function generator (p1070). The reason for this is that the ramp-function generator output is automatically set when transitioning from closed-loop speed controlled into open-loop speed controlled operation.
Reaction upon N:	NONE
Acknowled. upon N:	NONE
A07440	EPOS: Jerk time is limited
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The calculation of the jerk time $Tr = \text{MAX}(p2572, p2573) / p2574$ resulted in an excessively high value so that the jerk time is internally limited to 1000 ms.
	Note: The alarm is also output if jerk limiting is not active.
Remedy:	- increase the jerk limiting (p2574). - reduce maximum acceleration or maximum deceleration (p2572, p2573). See also: p2572 (EPOS maximum acceleration), p2573 (EPOS maximum deceleration), p2574 (EPOS jerk limiting)
A07441	LR: Save the position offset of the absolute encoder adjustment
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The status of the absolute encoder adjustment has changed. In order to permanently save the determined position offset (p2525) it must be saved in a non-volatile fashion (p0971, p0977).
Remedy:	None necessary. This alarm automatically disappears after the offset has been saved. See also: p2507 (LR absolute encoder adjustment status), p2525 (LR encoder adjustment, offset)
F07442 (A)	LR: Multiturn does not match the modulo range
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The ratio between the multiturn resolution and the modulo range (p2576) is not an integer number. This results in the adjustment being set back, as the position actual value cannot be reproduced after power-off/power-on.

Remedy: Make the ratio between the multiturn resolution and the modulo range an integer number.

The ratio v is calculated as follows:

1. Motor encoder without position tracking:

$$v = (p0421 * p2506 * p0433 * p2505) / (p0432 * p2504 * p2576)$$

2. Motor encoder with position tracking for the measuring gear:

$$v = (p0412 * p2506 * p2505) / (p2504 * p2576)$$

3. Motor encoder with position tracking for the load gear:

$$v = (p2721 * p2506 * p0433) / (p0432 * p2576)$$

4. Motor encoder with position tracking for the load and measuring gear:

$$v = (p2721 * p2506) / p2576$$

5. Direct encoder without position tracking:

$$v = (p0421 * p2506 * p0433) / (p0432 * p2576)$$

6. Direct encoder with position tracking for the measuring gear:

$$v = (p0412 * p2506) / p2576$$

Note:

With position tracking, it is recommended that p0412 and p2721 are changed

See also: p0412, p0432, p0433, p2504, p2505, p2506, p2576, p2721

Reaction upon A: NONE

Acknowl. upon A: NONE

F07443 (A) LR: Reference point coordinate not in the permissible range

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The reference point coordinate received when adjusting the encoder via connector input p2599 lies outside the half of the encoder range and cannot be set as actual axis position.

Fault value (r0949, interpret decimal):

Maximum permissible value for the reference point coordinate.

Remedy: Set the reference point coordinate to a lower value than specified in the fault value.

See also: p2598 (EPOS reference point coordinate, signal source), p2599 (EPOS reference point coordinate value)

Reaction upon A: NONE

Acknowl. upon A: NONE

F07446 (A) Load gear: Position tracking cannot be reset

Message value: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The position tracking cannot be reset.

Remedy: Reset the position tracking as follows:

- select encoder commissioning (p0010 = 4).

- reset position tracking, position (p2720.2 = 1).

- deselect encoder commissioning (p0010 = 0).

The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).

Reaction upon A: NONE

Acknowl. upon A: NONE

F07447	Load gear: Position tracking, maximum actual value exceeded
Message value:	Component number: %1, encoder data set: %2, drive data set: %3
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	When the position tracking of the load gear is configured, the drive/encoder (motor encoder) identifies a maximum possible absolute position actual value (r2723) that can no longer be represented within 32 bits. Maximum value: $p0408 * 2^{p0419}$ Fault value (r0949, interpret hexadecimal): ccbbaa hex aa = encoder data set bb = component number cc = drive data set See also: p0408 (Rotary encoder pulse No.), p0419 (Fine resolution absolute value Gx_XIST2 (in bits)), p2721 (Load gear, rotary absolute gearbox, revolutions, virtual)
Remedy:	- reduce the fine resolution (p0419). - reduce the multiturn resolution (p2721). See also: p0419 (Fine resolution absolute value Gx_XIST2 (in bits)), p2721 (Load gear, rotary absolute gearbox, revolutions, virtual)
F07448 (A)	Load gear: Position tracking, linear axis has exceeded the maximum range
Message value:	-
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	For a configured linear axis/no modulo axis, the currently effective motor encoder (encoder 1) has exceeded the maximum possible traversing range. For the configured linear axis, the maximum traversing range is defined to be $64x (+/- 32x)$ of p0421. It should be read in p2721 and interpreted as the number of load revolutions. Note: Only the motor encoder in the currently effective drive data set is monitored here. The actual effective drive data set is displayed in $x = r0051$ and the corresponding motor encoder is specified in in p0187[x].
Remedy:	The fault should be resolved as follows: - select encoder commissioning (p0010 = 4). - reset position tracking, position (p2720.2 = 1). - deselect encoder commissioning (p0010 = 0). The fault should then be acknowledged and the absolute encoder adjusted.
Reaction upon A:	NONE
Acknowled. upon A:	NONE
F07449 (A)	Load gear: Position tracking, actual position outside tolerance window
Message value:	%1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	When powered down, the currently effective motor encoder was moved through a distance greater than was parameterized in the tolerance window. It is possible that there is no longer any reference between the mechanical system and encoder. Note: Only the motor encoder in the currently effective drive data set is monitored here. The actual effective drive data set is displayed in $x = r0051$ and the corresponding motor encoder is specified in in p0187[x]. Fault value (r0949, interpret decimal): Deviation (difference) to the last encoder position in increments of the absolute value after the measuring gear - if one is being used. The sign designates the traversing direction. Note: The deviation (difference) found is also displayed in r2724. See also: p2722 (Load gear, position tracking tolerance window), r2724 (Load gear position difference)

Remedy: Reset the position tracking as follows:
 - select encoder commissioning (p0010 = 4).
 - reset position tracking, position (p2720.2 = 1).
 - deselect encoder commissioning (p0010 = 0).
 The fault should then be acknowledged and, if necessary, the absolute encoder adjusted (p2507).

F07450 (A) LR: Standstill monitoring has responded

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: After the standstill monitoring time (p2543) expired, the drive left the standstill window (p2542).
 - position actual value inversion incorrectly set (p0410).
 - standstill window set too small (p2542).
 - standstill monitoring time set too low (p2543).
 - position loop gain too low (p2538).
 - position loop gain too high (instability/oscillation, p2538).
 - mechanical overload.
 - check the connecting cable, motor/drive converter (phase missing, interchange).
 - when selecting motor identification, select tracking mode (BI: p2655[0] = 1 signal).
 - when selecting function generator, select tracking mode (BI: p2655[0] = 1 signal) and deactivate position control (BI:p2550 = 0 signal).
Remedy: Check the causes and resolve.
 Reaction upon A: NONE
 Acknowl. upon A: NONE

F07451 (A) LR: Position monitoring has responded

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: When the position monitoring time (p2545) expired, the drive had still not reached the positioning window (p2544).
 - positioning window parameterized too small (p2544).
 - position monitoring time parameterized too short (p2545).
 - position loop gain too low (p2538).
 - position loop gain too high (instability/oscillation, p2538).
 - drive mechanically locked.
Remedy: Check the causes and resolve.
 Reaction upon A: NONE
 Acknowl. upon A: NONE

F07452 (A) LR: Following error too high

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The difference between the position setpoint position actual value (following error dynamic model, r2563) is greater than the tolerance (p2546).
 - the drive torque or accelerating capacity exceeded.
 - position measuring system fault.
 - position control sense incorrect.
 - mechanical system locked.
 - excessively high traversing velocity or excessively high position reference value (setpoint) differences

Remedy: Check the causes and resolve.
Reaction upon A: NONE
Acknowled. upon A: NONE

F07453 **LR: Position actual value preprocessing error**
Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: An error has occurred during the position actual value preprocessing.
Remedy: Check the encoder for the position actual value preprocessing.
See also: p2502 (LR encoder assignment)

A07454 **LR: Position actual value preprocessing does not have a valid encoder**
Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: One of the following problems has occurred with the position actual value preprocessing:
- an encoder is not assigned for the position actual value preprocessing (p2502 = 0).
- an encoder is assigned, but no encoder data set (p0187 = 99 or p0188 = 99 or p0189 = 99).
- an encoder and an encoder data set have been assigned, however, the encoder data set does not contain any encoder data (p0400 = 0) or invalid data (e.g. p0408 = 0).
Remedy: Check the drive data sets, encoder data sets and encoder assignment.
See also: p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number), p0400 (Encoder type selection), p2502 (LR encoder assignment)

A07455 **EPOS: Maximum velocity limited**
Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The maximum velocity (p2571) is too high to correctly calculate the modulo correction.
Within the sampling time for positioning (p0115[5]), with the maximum velocity, a maximum of the half modulo length must be moved through. p2571 was limited to this value.
Remedy: - reduce the maximum velocity (p2571).
- increase the sampling time for positioning (p0115[5]).

A07456 **EPOS: Setpoint velocity limited**
Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The actual setpoint velocity is greater than the parameterized maximum velocity (p2571) and is therefore limited.
Remedy: - check the entered setpoint velocity.
- reduce the velocity override (CI: p2646).
- increase the maximum velocity (p2571).
- check the signal source for the externally limited velocity (CI: p2594).

A07457	EPOS: Combination of input signals illegal
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	An illegal combination of input signals that are simultaneously set was identified. Alarm value (r2124, interpret decimal): 0: Jog 1 and jog 2 (p2589, p2590). 1: Jog 1 or jog 2 and direct setpoint input/MDI (p2589, p2590, p2647). 2: Jog 1 or jog 2 and start referencing (p2589, p2590, p2595). 3: Jog 1 or jog 2 and activate traversing task (p2589, p2590, p2631). 4: Direct setpoint input/MDI and starting referencing (p2647, p2595). 5: Direct setpoint input/MDI and activate traversing task (p2647, p2631). 6: Start referencing and activate traversing task (p2595, p2631).
Remedy:	Check the appropriate input signals and correct.
F07458	EPOS: Reference cam not found
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	After starting the search for reference, the axis moved through the maximum permissible distance to search for the reference cam without actually finding the reference cam.
Remedy:	- check the "reference cam" binector input (BI: p2612). - check the maximum permissible distance to the reference cam (p2606). - if axis does not have any reference cam, then set p2607 to 0. See also: p2606 (EPOS search for reference, reference cam, maximum distance), p2607 (EPOS search for reference, reference cam present), p2612 (EPOS search for reference, reference cam)
F07459	EPOS: No zero mark
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	After leaving the reference cam, the axis has traversed the maximum permissible distance between the reference cam and zero mark without finding the zero mark.
Remedy:	- check the encoder regarding the zero mark - check the maximum permissible distance between the reference cam and zero mark (p2609). - use an external encoder zero mark (equivalent zero mark) (p0495). See also: p0495 (Equivalent zero mark, input terminal), p2609 (EPOS search for reference, max. distance ref. cam and zero mark)
F07460	EPOS: End of reference cam not found
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	During the search for reference, when the axis reached the zero mark it also reached the end of the traversing range without detecting an edge at the binector input "reference cam" (BI: p2612). Maximum traversing range: -2147483648 [LU] ... -2147483647 [LU]
Remedy:	- check the "reference cam" binector input (BI: p2612). - repeat the search for reference. See also: p2612 (EPOS search for reference, reference cam)

A07461	EPOS: Reference point not set
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	When starting a traversing block/direct setpoint input, a reference point is not set (r2684.11 = 0).
Remedy:	Reference the system (search for reference, flying referencing, set reference point).

A07462	EPOS: Selected traversing block number does not exist
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	A traversing block selected via BI: p2625 to BI: p2630 was started via BI: p2631 = 0/1 edge "Activate traversing task". - the number of the started traversing block is not contained in p2616[0...n]. - the started traversing block is suppressed. Alarm value (r2124, interpret decimal): Number of the selected traversing block that is also not available.
Remedy:	- correct the traversing program. - select an available traversing block number.

A07463 (F)	EPOS: External block change not requested in the traversing block
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	For a traversing block with the block change enable CONTINUE_EXTERNAL_ALARM, the external block change was not requested. Alarm value (r2124, interpret decimal): Number of the traversing block.
Remedy:	Resolve the reason as to why the edge is missing at binector input (BI: p2632).
Reaction upon F:	OFF1
Acknowl. upon F:	IMMEDIATELY

F07464	EPOS: Traversing block is inconsistent
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The traversing block does not contain valid information. Alarm value (r2124, interpret decimal): Number of the traversing block with invalid information.
Remedy:	Check the traversing block and where relevant, take into consideration alarms that are present.

A07465	EPOS: Traversing block does not have a subsequent block
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	There is no subsequent block in the traversing block. Alarm value (r2124, interpret decimal): Number of the traversing block with the missing subsequent block.
Remedy:	- parameterize this traversing block with the block change enable END. - parameterize additional traversing blocks with a higher block number and for the last block, using the block change enable END.

A07466	EPOS: Traversing block number assigned a multiple number of times
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The same traversing block number was assigned a multiple number of times. Alarm value (r2124, interpret decimal): Number of the traversing block that was assigned a multiple number of times.
Remedy:	Correct the traversing blocks.
A07467	EPOS: Traversing block has illegal task parameters
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The task parameter in the traversing block contains an illegal value. Alarm value (r2124, interpret decimal): Number of the traversing block with an illegal task parameter.
Remedy:	Correct the task parameter in the traversing block.
A07468	EPOS: Traversing block jump destination does not exist
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In a traversing block, a jump was programmed to a non-existent block. Alarm value (r2124, interpret decimal): Number of the traversing block with a jump destination that does not exist.
Remedy:	- correct the traversing block. - add the missing traversing block.
A07469	EPOS: Traversing block < target position < software limit switch minus
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the traversing block the specified absolute target position lies outside the range limited by the software limit switch minus. Alarm value (r2124, interpret decimal): Number of the traversing block with illegal target position.
Remedy:	- correct the traversing block. - change software limit switch minus (CI: p2578, p2580).
A07470	EPOS: Traversing block > target position > software limit switch plus
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the traversing block the specified absolute target position lies outside the range limited by the software limit switch plus. Alarm value (r2124, interpret decimal): Number of the traversing block with illegal target position.
Remedy:	- correct the traversing block. - change software limit switch plus (CI: p2579, p2581).

A07471	EPOS: Traversing block target position outside the modulo range
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the traversing block the target position lies outside the modulo range. Alarm value (r2124, interpret decimal): Number of the traversing block with illegal target position.
Remedy:	- in the traversing block, correct the target position. - change the modulo range (p2576).

A07472	EPOS: Traversing block ABS_POS/ABS_NEG not possible
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the traversing block the positioning mode ABS_POS or ABS_NEG were parameterized with the modulo correction not activated. Alarm value (r2124, interpret decimal): Number of the traversing block with the illegal positioning mode.
Remedy:	Correct the traversing block.

A07473 (F)	EPOS: Beginning of traversing range reached
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	When traversing, the axis has moved to the traversing range limit.
Remedy:	Move away in the positive direction.
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowled. upon F:	IMMEDIATELY

A07474 (F)	EPOS: End of traversing range reached
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	When traversing, the axis has moved to the traversing range limit.
Remedy:	Move away in the negative direction.
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowled. upon F:	IMMEDIATELY

F07475 (A)	EPOS: Target position < start of traversing range
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The target position for relative traversing lies outside the traversing range.
Remedy:	Correct the target position.
Reaction upon A:	NONE
Acknowled. upon A:	NONE

F07476 (A)	EPOS: Target position > end of the traversing range
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The target position for relative traversing lies outside the traversing range.
Remedy:	Correct the target position.
Reaction upon A:	NONE
Acknowl. upon A:	NONE
A07477 (F)	EPOS: Target position < software limit switch minus
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the actual traversing operation, the target position is less than the software limit switch minus.
Remedy:	- correct the target position. - change software limit switch minus (CI: p2578, p2580). See also: p2578 (EPOS software limit switch minus signal source), p2580 (EPOS software limit switch minus), p2582 (EPOS software limit switch activation)
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY
A07478 (F)	EPOS: Target position > software limit switch plus
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the actual traversing operation, the target position is greater than the software limit switch plus.
Remedy:	- correct the target position. - change software limit switch plus (CI: p2579, p2581). See also: p2579 (EPOS software limit switch plus signal source), p2581 (EPOS software limit switch plus), p2582 (EPOS software limit switch activation)
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY
A07479	EPOS: Software limit switch minus reached
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The axis is at the position of the software limit switch minus. An active traversing block was interrupted.
Remedy:	- correct the target position. - change software limit switch minus (CI: p2578, p2580). See also: p2578 (EPOS software limit switch minus signal source), p2580 (EPOS software limit switch minus), p2582 (EPOS software limit switch activation)
A07480	EPOS: Software limit switch plus reached
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The axis is at the position of the software limit switch plus. An active traversing block was interrupted.

Remedy:

- correct the target position.
- change software limit switch plus (CI: p2579, p2581).

See also: p2579 (EPOS software limit switch plus signal source), p2581 (EPOS software limit switch plus), p2582 (EPOS software limit switch activation)

F07481 (A) EPOS: Axis position < software limit switch minus

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF1 (OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The actual position of the axis is less than the position of the software limit switch minus.

Remedy:

- correct the target position.
- change software limit switch minus (CI: p2578, p2580).

See also: p2578 (EPOS software limit switch minus signal source), p2580 (EPOS software limit switch minus), p2582 (EPOS software limit switch activation)

Reaction upon A: NONE

Acknowled. upon A: NONE

F07482 (A) EPOS: Axis position > software limit switch plus

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF1 (OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The actual position of the axis is greater than the position of the software limit switch plus.

Remedy:

- correct the target position.
- change software limit switch plus (CI: p2579, p2581).

See also: p2579 (EPOS software limit switch plus signal source), p2581 (EPOS software limit switch plus), p2582 (EPOS software limit switch activation)

Acknowled. upon A: NONE

A07483 EPOS: Travel to fixed stop clamping torque not reached

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The fixed stop in the traversing block was reached without the clamping torque/clamping force having been achieved.

Remedy:

- Check the maximum torque-generating current (r1533).
- check the torque limits (p1520, p1521).
- check the power limits (p1530, p1531).
- check the BICO interconnections of the torque limits (p1522, p1523, p1528, p1529).

F07484 EPOS: Fixed stop outside the monitoring window

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF3 (OFF1, OFF2)

Acknowledge: IMMEDIATELY

Cause: In the "fixed stop reached" state, the axis has moved outside the defined monitoring window (p2635).

Remedy:

- check the monitoring window (p2635).
- check the mechanical system.

F07485 (A)	EPOS: Fixed stop not reached
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	In a traversing block with the task FIXED STOP, the end position was reached without detecting a fixed stop.
Remedy:	- check the traversing block and locate the target position further into the workpiece. - check the "fixed stop reached" control signal (p2637). - if required, reduce the maximum following error window to detect the fixed stop (p2634).
Reaction upon A:	NONE
Acknowled. upon A:	NONE
A07486	EPOS: Intermediate stop missing
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the modes "traversing blocks" or "direct setpoint input/MDI" at the start of motion, the binector input "no intermediate stop/intermediate stop" (BI: p2640) did not have a 1 signal.
Remedy:	Connect a 1 signal to the binector input "no intermediate stop/intermediate stop" (BI: p2640) and re-start motion. See also: p2640 (EPOS intermediate stop (0 signal))
A07487	EPOS: Reject traversing task missing
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	In the modes "traversing blocks" or "direct setpoint input/MDI" at the start of motion, the binector input "do not reject traversing task/reject traversing task" (BI: p2641) does not have a 1 signal.
Remedy:	Connect a 1 signal to the binector input "do not reject traversing task/reject traversing task" (BI: p2641) and restart motion. See also: p2641 (EPOS reject traversing task (0 signal))
F07488	EPOS: Relative positioning not possible
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	In the mode "direct setpoint input/MDI", for continuous transfer (p2649 = 1) relative positioning was selected (BI: p2648 = 0 signal).
Remedy:	Check the control.
A07489	EPOS: Reference point correction outside the window
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	For the function "flying referencing" the difference between the measured position at the measuring probe and the reference point coordinate lies outside the parameterized window.
Remedy:	- check the mechanical system. - check the parameterization of the window (p2602).

F07490	EPOS: Enable signal withdrawn while traversing
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	- for a standard assignment, another fault may have occurred as a result of withdrawing the enable signals. - the drive is in the "switching on inhibited" state (for a standard assignment).
Remedy:	- set the enable signals or check the cause of the fault that first occurred and then result (for a standard assignment). - check the assignment to enable the basic positioning function.

F07491 (A)	EPOS: STOP cam minus reached
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF3
Acknowledge:	IMMEDIATELY
Cause:	A zero signal was detected at binector input BI: p2569, i.e. the STOP cam minus was reached. For a positive traversing direction, the STOP cam minus was reached - i.e. the wiring of the STOP cam is incorrect. See also: p2569 (EPOS STOP cam minus)
Remedy:	- leave the STOP cam minus in the positive traversing direction and return the axis to the valid traversing range. - check the wiring of the STOP cam.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F07492 (A)	EPOS: STOP cam plus reached
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF3
Acknowledge:	IMMEDIATELY
Cause:	A zero signal was detected at binector input BI: p2570, i.e. the STOP cam plus was reached. For a negative traversing direction, the STOP cam plus was reached - i.e. the wiring of the STOP cam is incorrect. See also: p2570 (EPOS STOP cam plus)
Remedy:	- leave the STOP cam plus in the negative traversing direction and return the axis to the valid traversing range. - check the wiring of the STOP cam.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F07493	LR: Overflow of the value range for position actual value
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset. Fault value (r0949, interpret decimal): 1: The position actual value (r2521) has exceeded the value range. 2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range. 3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.

Remedy: If required, reduce the traversing range or position resolution (p2506).
 Increase the fine resolution of absolute position actual value (p0419).
 Reference to fault value = 3:
 If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.
 For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
 1. Motor encoder without position tracking
 $p2506 * p0433 * p2505 / (p0432 * p2504)$
 $p2506 * p0433 * p2505 * p0421 / (p0432 * p2504)$ for multiturn encoders
 2. Motor encoder with position tracking for measuring gear:
 $p2506 * p0412 * p2505 / p2504$
 3. Motor encoder with position tracking for load gear
 $p2506 * p2721 * p0433 / p0432$
 4. Motor encoder with position tracking for load and measuring gear
 $p2506 * p2721$
 5. Direct encoder without position tracking
 $p2506 * p0433 / p0432$
 $p2506 * p0433 * p0421 / p0432$ for multiturn encoders
 6. Direct encoder with position tracking for measuring gear
 $p2506 * p0412$

F07494 LR: Drive Data Set changeover in operation

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A drive data set changeover (DDS changeover) when the mechanical relationships change (p2503 .. 2506), the direction of rotation (p1821) or the encoder assignment (p2502) were requested during operation.
Remedy: To changeover the drive data set, initially, exit the "operation" mode.

A07495 (F) LR: Reference function interrupted

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
 - an encoder fault has occurred (Gn_ZSW.15 = 1).
 - position actual value was set during an activated reference function.
 - simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
 - activated reference function (reference mark search or measuring probe evaluation) was deactivated (BI: p2508 and BI: p2509 = 0 signal).
Remedy:
 - check the causes and resolve.
 - reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.
 Reaction upon F: OFF1 (OFF2, OFF3)
 Acknowled. upon F: IMMEDIATELY

A07496 EPOS: Enable not possible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: It is not possible to enable the basic positioner because at least one signal is missing.
 Alarm value (r2124, interpret decimal):
 1: EPOS enable missing (BI: p2656).
 2: Position actual value, valid feedback signal missing (BI: p2658).
 See also: p2656 (EPOS enable basic positioner), p2658 (EPOS pos. actual value valid, feedback signal)
Remedy: Check the appropriate binector inputs and signals.

A07497 LR: Position setting value activated

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The position actual value is set to the value received via CI: p2515 while BI: p2514 = 1 signal. A possible system deviation cannot be corrected.
Remedy: None necessary.
The alarm automatically disappears with BI: p2514 = 0 signal.

A07498 (F) LR: Measuring probe evaluation not possible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When evaluating the measuring probe, an error occurred.
Alarm value (r2124, interpret decimal):
6: The input terminal for the measuring probe is not set.
4098: Error when initializing the measuring probe.
4100: The measuring pulse frequency is too high.
> 50000: The measuring clock cycle is not a multiple integer of the position controller clock cycle.
Remedy: Deactivate the measuring probe evaluation (BI: p2509 = 0 signal).
Re alarm value = 6:
Set the input terminal for the measuring probe (p0488, p0489 or p2517, p2518).
Re alarm value = 4098:
Check the Control Unit hardware.
Re alarm value = 4100:
Reduce the frequency of the measuring pulses at the measuring probe.
Re alarm value > 50000:
Set the clock cycle ratio of the measuring clock cycle to the position controller clock cycle to an integer multiple.
To do this, the currently effective measuring clock cycle can be determined from the alarm value as follows:
 $T_{\text{meas}} [125 \mu\text{s}] = \text{alarm value} - 50000$
With PROFIBUS, the measuring clock cycle corresponds to the PROFIBUS clock cycle (r2064[1]).
Without PROFIBUS, the measuring clock cycle is an internal cycle time that cannot be influenced.
Reaction upon F: OFF1
Acknowled. upon F: IMMEDIATELY

F07499 (A) EPOS: Reversing cam approached with the incorrect traversing direction

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF3
Acknowledge: IMMEDIATELY
Cause: The reversing cam MINUS was approached in the positive traversing direction or the reversing cam PLUS was approached in the negative traversing direction.
See also: p2613 (EPOS search for reference reversing cam minus), p2614 (EPOS search for reference reversing cam plus)
Remedy: - check the wiring of the reversing cam (BI: p2613, BI: p2614).
- check the traversing direction to approach the reversing cam.
Reaction upon A: NONE
Acknowled. upon A: NONE

F07500	Drive: Power unit data set PDS not configured
Message value:	Drive data set: %1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	Only for controlled line supply infeed/regenerative feedback units: The power unit data set was not configured - this means that a data set number was not entered into the drive data set. Fault value (r0949, interpret decimal): Drive data set number of p0185.
Remedy:	The index of the power unit data set associated with the drive data set should be entered into p0185.
F07501	Drive: Motor Data Set MDS not configured
Message value:	Drive data set: %1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Only for power units: The motor data set was not configured - this means that a data set number was not entered into the associated drive data set. Fault value (r0949, interpret decimal): The fault value includes the drive data set number of p0186.
Remedy:	The index of the motor data set associated with the drive data set should be entered into p0186. See also: p0186 (Motor Data Sets (MDS) number)
F07502	Drive: Encoder Data Set EDS not configured
Message value:	Drive data set: %1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Only for power units: The encoder data set was not configured - this means that a data set number was not entered into the associated drive data set. Fault value (r0949, interpret decimal): The fault value includes the drive data set number of p0187, p0188 and p0189. The fault value is increased by 100 * encoder number (e.g. for p0189: Fault value 3xx with xx = data set number).
Remedy:	The index of the encoder data set associated with the drive data set should be entered into p0187 (1st encoder), p0188 (2nd encoder) and p0189 (3rd encoder).
A07504	Drive: Motor data set is not assigned to a drive data set
Message value:	%1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	A motor data set is not assigned to a drive object. All of the existing motor data sets in the drive data sets must be assigned using the MDS number (p0186[0...n]). There must be at least as many drive data sets as motor data sets. Alarm value (r2124, interpret decimal): Number of the motor data set that has not been assigned.
Remedy:	In the drive data sets, assign the non-assigned motor data set using the MDS number (p0186[0...n]). - check whether all of the motor data sets are assigned to drive data sets. - if required, delete superfluous motor data sets. - if required, set up new drive data sets and assign to the corresponding motor data sets. See also: p0186 (Motor Data Sets (MDS) number)

F07509	Drive: Component number missing
Message value:	%1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A Drive Data Set (DDS) is assigned to a Motor Data Set (MDS) or Encoder Data Set (EDS) that does not have a component number. Alarm value (r2124, interpret decimal): nnmmmmxyyy nn: Number of the MDS/EDS. mmm: Parameter number of the missing component number. xx: Number of the DDS that is assigned to the MDS/EDS. yyy: Parameter number that references the MDS/EDS. Example: p0186[7] = 5: DDS 7 is assigned MDS 5. p0131[5] = 0: There is no component number set in MDS 5. Alarm value = 0513107186
Remedy:	In the drive data sets, no longer assign MDS/EDS using p0186, p0187, p0188, p0189 or set a valid component number. See also: p0131, p0141, p0142, p0186, p0187, p0188, p0189
F07510	Drive: Identical encoder in the drive data set
Message value:	%1
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	More than one encoder with identical component number is assigned to a single drive data set. In one drive data set, it is not permissible that identical encoders are operated together. Fault value (r0949, interpret decimal): 1000 * first identical encoder + 100 * second identical encoder + drive data set. Example: Fault value = 1203 means: In drive data set 3, the first (p0187[3]) and second encoder (p0188[3]) are identical.
Remedy:	Assign the drive data set to different encoders. See also: p0141, p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)
F07511	Drive: Encoder used a multiple number of times
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	Each encoder may only be assigned to one drive and within a drive must - in each drive data set - either always be encoder 1, always encoder 2 or always encoder 3. This unique assignment has been violated. Fault value (r0949, interpret decimal): The two parameters in coded form, that refer to the same component number. First parameter: Index: First and second decimal place (99 for EDS, not assigned DDS) Parameter number: Third decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS not assigned DDS) Drive number: Fourth and fifth decimal place Second parameter: Index: Sixth and seventh decimal place (99 for EDS, not assigned DDS) Parameter number: Eighth decimal place (1 for p0187, 2 for p0188, 3 for p0189, 4 for EDS, not assigned DDS) Drive number: Ninth and tenth decimal place See also: p0141
Remedy:	Correct the double use of a component number using the two parameters coded in the fault value.

F07512	Drive: Encoder data set changeover cannot be parameterized
Message value:	%1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Using p0141, a changeover of the encoder data set is prepared that is illegal. In this firmware release, an encoder data set changeover is only permitted for the components in the actual topology. Alarm value (r2124, interpret decimal): Incorrect EDS data set number. See also: p0187 (Encoder 1 encoder data set number), p0188 (Encoder 2 encoder data set number), p0189 (Encoder 3 encoder data set number)
Remedy:	Every encoder data set must be assigned its own dedicated DRIVE-CLiQ socket. The component numbers of the encoder interfaces (p0141) must have different values within a drive object. The following must apply: p0141[0] not equal to p0141[1] not equal to ... not equal to p0141[n]
A07514 (N)	Drive: Data structure does not correspond to the interface module
Message value:	-
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The interface mode "SIMODRIVE 611 universal" was set (p2038 = 1) and the data structure does not correspond to this mode. For the data structure, the following rule must be complied with. Within the group of 8 drive data sets, the assignment to the motor data set must be set the same: p0186[0] = p0186[1] = ... = p0186[7] p0186[8] = p0186[9] = ... = p0186[15] p0186[16] = p0186[17] = ... = p0186[23] p0186[24] = p0186[25] = ... = p0186[31] See also: p0180 (Number of Drive Data Sets (DDS)), p0186 (Motor Data Sets (MDS) number), p2038 (PROFIdrive STW/ZSW interface mode)
Remedy:	- structure the data according to the rules of the "SIMODRIVE 611 universal" interface mode. - check the interface mode (p2038).
Reaction upon N:	NONE
Acknowled. upon N:	NONE
F07515	Drive: Power unit and motor incorrectly connected
Message value:	%1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A power unit (via PDS) was assigned to a motor (via MDS) in a drive data set that is not connected in the target topology. Alarm value (r2124, interpret decimal): Number of the incorrectly parameterized drive data set.
Remedy:	- assign the drive data set to a combination of motor and power unit permitted by the target topology. - adapt the target topology. See also: p0121 (Power unit component number), p0131 (Motor component number), p0186 (Motor Data Sets (MDS) number)

F07516	Drive: Re-commission the data set
Message value:	%1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The assignment between the drive data set and motor data set (p0186) or between the drive data set and the encoder data set was modified (p0187). This is the reason that the drive data set must re-commissioned. Fault value (r0949, interpret decimal): Drive data set to be re-commissioned.
Remedy:	Commission the drive data set specified in the fault value (r0949).

F07517	Drive: Encoder data set changeover incorrectly parameterized
Message value:	%1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	An MDS cannot have different motor encoders in two different DDS. The following parameterization therefore results results in an error: p0186[0] = 0, p0187[0] = 0 p0186[0] = 0, p0187[0] = 1 Alarm value (r2124, interpret decimal): The lower 16 bits indicate the first DDS and the upper 16 bits indicate the second DDS.
Remedy:	If you wish to operate a motor once with one motor encoder and then another time with the other motor encoder, then you must set up two different MDSs, in which the motor data are the same. Example: p0186[0] = 0, p0187[0] = 0 p0186[0] = 1, p0187[0] = 1

F07518	Drive: Motor data set changeover incorrectly parameterized
Message value:	%1
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The system has identified that two motor data sets were incorrectly parameterized. Parameter r0313 (calculated from p0314, p0310, p0311), r0315 and p1982 may only have different values if the motor data sets are assigned different motors. p0827 is used to assign the motors and/contactors. It is not possible to toggle between motor data sets. Alarm value (r2124, interpret hexadecimal): xxxxyyyy: xxxx: First DDS with assigned MDS, yyyy: Second DDS with assigned MDS
Remedy:	Correct the parameterization of the motor data sets.

A07519	Drive: Motor changeover incorrectly parameterized
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	With the setting p0833.0 = 1, a motor changeover via the application is selected. This is the reason that p0827 must have different values in the appropriate motor data set. Alarm value (r2124, interpret hexadecimal): xxxxyyyy: xxxx: First MDS, yyyy: Second MDS
Remedy:	- parameterize the appropriate motor data sets differently (p0827). - select the setting p0833.0 = 0 (motor changeover via the drive).

A07520	Drive: Motor cannot be changed over
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The motor cannot be changed over. Alarm value (r2124, interpret decimal): 1: The contactor for the motor that is presently active cannot be opened, because for a synchronous motor, the speed (r0063) is greater than the speed at the start of field weakening (p3048). As long as r0063 > p0348, the current in the motor does not decay in spite of the pulses being suppressed. 2: The "contactor opened" feedback signal was not detected within 1 s. 3: The "contactor closed" feedback signal was not detected within 1 s.
Remedy:	Re alarm value = 1: Set the speed lower than the speed at the start of field weakening (r0063 < p0348). Re alarm value = 2, 3: Check the feedback signals of the contactor involved.
A07530	Drive: Drive Data Set DDS not present
Message value:	-
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected drive data set is not available (p0837 > p0180). The drive data set was not changed over. See also: p0180, p0820, p0821, p0822, p0823, p0824, r0837
Remedy:	- select the existing drive data set. - set up additional drive data sets.
A07541	Drive: Data set changeover not possible
Message value:	-
Drive object:	A_INF, B_INF, ENCODER, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The selected drive data set changeover and the assigned motor changeover are not possible and are not carried out. For synchronous motors, the motor contactor may only be switched for actual speeds less than the speed at the start of field weakening (r0063 < p0348). See also: r0063, p0348
Remedy:	Reduce the speed below the speed at the start of field weakening.
A07550 (F, N)	Drive: Not possible to reset encoder parameters
Message value:	%1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	When carrying out a factory setting (e.g. using p0970 = 1), it was not possible to reset the encoder parameters. The encoder parameters are directly read out of the encoder via DRIVE-CLiQ. Alarm value (r2124, interpret decimal): Component number of the encoder involved.
Remedy:	- repeat the operation. - check the DRIVE-CLiQ connection.
Reaction upon F:	NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
Reaction upon N:	NONE
Acknowl. upon N:	NONE

F07551	Drive encoder: No commutation angle information
Message value:	Fault cause: %1, drive data set: %2
Drive object:	SERVO, VECTOR
Reaction:	OFF2 (IASC/DCBRAKE)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The commutation angle information is missing. This means that synchronous motors cannot be controlled (closed-loop control) Fault value (r0949, interpret decimal): yyyyxxxx dec: yyyy = fault cause, xxxx = drive data set yyyy = 1 dec: The motor encoder used does not supply an absolute commutation angle. yyyy = 2 dec: The selected ratio of the measuring gear does not match the motor pole pair number.
Remedy:	Re fault cause = 1: - check the encoder parameterization (p0404). - use an encoder with track C/D, EnDat interface of Hall sensors. - use an encoder with sinusoidal A/B track for which the motor pole pair number (r0313) is an integer multiple of the encoder pulse number (p0408). - activate the pole position identification routine (p1982 = 1). Re fault cause = 2: - the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number: (p0314 * p0433) / p0432. Note: For operation with track C/D, this quotient must be less than 8. See also: p0402 (Gearbox type selection), p0404 (Encoder configuration effective), p0432 (Gearbox factor, encoder revolutions), p0433 (Gearbox factor, motor/load revolutions)
F07552 (A)	Drive encoder: Encoder configuration not supported
Message value:	Fault cause: %1, component number: %2, encoder data set: %3
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The requested encoder configuration is not supported. Only bits may be requested in p0404 that are signaled as being supported by the encoder evaluation in r0456. Fault value (r0949, interpret decimal): Low word low byte: Encoder data set number Low word high byte: Component number High word: The encoder evaluation does not support a function selected in p0404. 1: sin/cos encoder with absolute track (this is supported by SME25). 3: Squarewave encoder (this is supported by SMC30). 4: sin/cos encoder (this is supported by SMC20, SMI20, SME20, SME25). 12: sin/cos encoder with reference mark (this is supported by SME20). 15: Commutation with zero mark for separately-excited synchronous motors with VECTORMV. 23: Resolver (this is supported by SMC10, SMI10). 65535: Other function (compare r0456 and p0404). See also: p0404 (Encoder configuration effective), r0456 (Encoder configuration supported)
Remedy:	- check the encoder parameterization (p0400, p0404). - use the matching encoder evaluation (r0456).
Reaction upon A:	NONE
Acknowled. upon A:	NONE

F07553 (A)	Drive encoder: Sensor Module configuration not supported
Message value:	Encoder data set: %1, first incorrect bit: %2, incorrect parameter: %3
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The Sensor Module does not support the requested configuration. For incorrect p0430 (cc = 0), the following applies: - In p0430 (requested functions), at least 1 bit was set that is not set in r0458 (supported functions) (exception: Bit 19, 28, 29, 30, 31). - p1982 > 0 (pole position identification requested), but r0458.16 = 0 (pole position identification not supported). For incorrect p0437 (cc = 1), the following applies: - In p0437 (requested functions), at least 1 bit was set that is not set in r0459 (supported functions). Fault value (r0949, interpret hexadecimal): ddccbbaa hex aa: encoder data set number bb: first incorrect bit cc: incorrect parameter cc = 0: incorrect parameter is p0430 cc = 1: incorrect parameter is p0437 cc = 2: incorrect parameter is r0459 dd: reserved (always 0)
Remedy:	- check the encoder parameterization (p0430, p0437). - check the pole position identification routine (p1982). - use the matching encoder evaluation (r0458, r0459). See also: p0430, p0437, r0458, r0459, p1982
Reaction upon A:	NONE
Acknowled. upon A:	NONE
F07555 (A)	Drive encoder: Configuration position tracking
Message value:	Component number: %1, encoder data set: %2, drive data set: %3, fault cause: %4
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The configuration of the position tracking is not supported. Position tracking can only be activated for absolute encoders. For linear axes, it is not possible to simultaneously activate the position tracking for load and measuring gears. Fault value (r0949, interpret hexadecimal): ddccbbaa hex aa = encoder data set bb = component number cc = drive data set dd = fault cause dd = 00 hex = 0 dez An absolute encoder is not being used. dd = 01 hex = 1 dez Position tracking cannot be activated because the memory of the internal NVRAM is not sufficient or a Control Unit does not have an NVRAM. dd = 02 hex = 2 dez For a linear axis, the position tracking was activated for the load and measuring gear. dd = 03 hex = 3 dez Position tracking cannot be activated because position tracking with another gear ratio, axis type or tolerance window has already been detected for this encoder data set. dd = 04 hex = 4 dez A linear encoder is being used. See also: p0404 (Encoder configuration effective), p0411 (Measuring gear, configuration)

Remedy:

- use an absolute encoder.
- if necessary, deselect the position tracking (p0411 for the measuring gear, p2720 for the load gear).
- use a Control Unit with sufficient NVRAM.
- Only activate position tracking of the load gear in the same encoder data set if the gear ratio (p2504, p2505), axis type (p2720.1) and tolerance window (p2722) are also the same.

Reaction upon A: NONE

Acknowled. upon A: NONE

F07556 Measuring gear: Position tracking, maximum actual value exceeded

Message value: Component number: %1, encoder data set: %2

Drive object: ENCODER, SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY

Cause: When the position tracking of the measuring gear is configured, the drive/encoder identifies a maximum possible absolute position actual value (r0483) that cannot be represented within 32 bits.
Maximum value: $p0408 * p0412 * 2^{p0419}$
Fault value (r0949, interpret decimal):
Low word low byte: Encoder data set number
Low word high byte: Component number
See also: p0408 (Rotary encoder pulse No.), p0412 (Measuring gear, absolute encoder, rotary, revolutions, virtual), p0419 (Fine resolution absolute value Gx_XIST2 (in bits))

Remedy:

- reduce the fine resolution (p0419).
- reduce the multiturn resolution (p0412).

See also: p0412 (Measuring gear, absolute encoder, rotary, revolutions, virtual), p0419 (Fine resolution absolute value Gx_XIST2 (in bits))

A07557 (F) Encoder 1: Reference point coordinate not in the permissible range

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the half of the encoder range and cannot be set as actual axis position. The maximum permissible value is displayed in the supplementary information.

Remedy: Set the reference point coordinate less than the value from the supplementary information.
See also: p2598 (EPOS reference point coordinate, signal source)

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowled. upon F: IMMEDIATELY

A07558 (F) Encoder 2: Reference point coordinate not in the permissible range

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the half of the encoder range and cannot be set as actual axis position. The maximum permissible value is displayed in the supplementary information.

Remedy: Set the reference point coordinate less than the value from the supplementary information.
See also: p2598 (EPOS reference point coordinate, signal source)

Reaction upon F: OFF1 (OFF2, OFF3)

Acknowled. upon F: IMMEDIATELY

A07559 (F)	Encoder 3: Reference point coordinate not in the permissible range
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The reference point coordinate received when adjusting the encoder via connector input CI:p2599 lies outside the half of the encoder range and cannot be set as actual axis position. The maximum permissible value is displayed in the supplementary information.
Remedy:	Set the reference point coordinate less than the value from the supplementary information. See also: p2598 (EPOS reference point coordinate, signal source)
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY
F07560	Drive encoder: Number of pulses is not to the power of two
Message value:	Encoder data set: %1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	For rotary absolute encoders, the pulse number in p0408 must be to the power of two. Fault value (r0949, interpret decimal): The fault value includes the encoder data set number involved.
Remedy:	- check the parameterization (p0408, p0404.1, r0458.5). - upgrade the Sensor Module firmware if necessary
F07561	Drive encoder: Number of multiturn pulses is not to the power of two
Message value:	Encoder data set: %1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The multiturn resolution in p0421 must be to the power of two. Fault value (r0949, interpret decimal): The fault value includes the encoder data set number involved.
Remedy:	- check the parameterization (p0421, p0404.1, r0458.5). - upgrade the Sensor Module firmware if necessary
F07562 (A)	Drive, encoder: Position tracking, incremental encoder not possible
Message value:	Fault cause: %1, component number: %2, encoder data set: %3
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The requested position tracking for incremental encoders is not supported. Fault value (r0949, interpret hexadecimal): ccccbbaa hex aa = encoder Data Set number bb = component number cccc = fault cause cccc = 00 hex = 0 dec The encoder type does not support the "Position tracking incremental encoder" function. cccc = 01 hex = 1 dec Position tracking cannot be activated because the memory of the internal NVRAM is not sufficient or a Control Unit does not have an NVRAM. cccc = 04 hex = 4 dec A linear encoder is used that does not support the position tracking function. See also: p0404 (Encoder configuration effective), p0411 (Measuring gear, configuration), r0456 (Encoder configuration supported)

Remedy:

- check the encoder parameterization (p0400, p0404).
- use a Control Unit with sufficient NVRAM.
- if required, deselect position tracking for the incremental encoder (p0411.3 = 0).

A07569 (F)	Encoder could not be identified
Message value:	-
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	During encoder identification (waiting) with p0400 = 10100, the encoder could not be identified. Either the wrong encoder has been installed or no encoder has been installed, the wrong encoder cable has been connected or no encoder cable has been connected to the Sensor Module, or the DRIVE-CLiQ component has not been connected to DRIVE-CLiQ. Note: Encoder identification must be supported by the encoder and is possible in the following cases: Encoder with EnDat interface, motor with DRIVE-CLiQ.
Remedy:	- check and, if necessary, connect the encoder and/or encoder cable. - check and, if necessary, establish the DRIVE-CLiQ connection. - in the case of encoders that cannot be identified (e.g. encoders without EnDat interface), the correct encoder type must be entered in p0400.
Reaction upon F:	NONE (OFF1, OFF2, OFF3)

A07593 (F)	Encoder 1: Value range for position actual value exceeded
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset. Fault value (r0949, interpret decimal): 1: The position actual value (r2521) has exceeded the value range. 2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range. 3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.
Remedy:	If required, reduce the traversing range or position resolution. Re alarm value = 3: Reducing the position resolution and conversion factor: - reduce the length unit (LU) per load revolution for rotary encoders (p2506). - increase the fine resolution of absolute position actual values (p0419).
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowled. upon F:	IMMEDIATELY

A07594 (F)	Encoder 2: Value range for position actual value exceeded
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset. Fault value (r0949, interpret decimal): 1: The position actual value (r2521) has exceeded the value range. 2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range. 3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.
Remedy:	If required, reduce the traversing range or position resolution. Re alarm value = 3: Reducing the position resolution and conversion factor: - reduce the length unit (LU) per load revolution for rotary encoders (p2506). - increase the fine resolution of absolute position actual values (p0419).
Reaction upon F:	OFF1 (OFF2, OFF3)
Acknowled. upon F:	IMMEDIATELY

A07595 (F)	Encoder 3: Value range for position actual value exceeded
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The value range (-2147483648 ... 2147483647) for the position actual value representation was exceeded. When the overflow occurs, the "referenced" or "adjustment absolute measuring system" status is reset. Fault value (r0949, interpret decimal): 1: The position actual value (r2521) has exceeded the value range. 2: The encoder position actual value Gn_XIST2 (r0483) or the absolute value after the load gear (r2723) has exceeded the value range. 3: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range for displaying the position actual value.

Remedy: If required, reduce the traversing range or position resolution.
Re alarm value = 3:
Reducing the position resolution and conversion factor:
- reduce the length unit (LU) per load revolution for rotary encoders (p2506).
- increase the fine resolution of absolute position actual values (p0419).

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07596 (F) Encoder 1: Reference function interrupted

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was deactivated (BI: p2508 and BI: p2509 = 0 signal).

Remedy: - check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07597 (F) Encoder 2: Reference function interrupted

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was deactivated (BI: p2508 and BI: p2509 = 0 signal).

Remedy: - check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A07598 (F) Encoder 3: Reference function interrupted

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An activated reference function (reference mark search or measuring probe evaluation) was interrupted.
- an encoder fault has occurred (Gn_ZSW.15 = 1).
- position actual value was set during an activated reference function.
- simultaneously activate reference mark search and measuring probe evaluation (BI: p2508 and BI: p2509 = 1 signal).
- activated reference function (reference mark search or measuring probe evaluation) was deactivated (BI: p2508 and BI: p2509 = 0 signal).

Remedy: - check the causes and resolve.
- reset the control (BI: p2508 and BI: p2509 = 0 signal) and activate the requested function.

Reaction upon F: OFF1 (OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

F07599 (A) Encoder 1: Adjustment not possible

Message value: Drive data set: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range (-2147483648 ... 2147483647) for displaying the position actual value.
Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking:
 $p2506 * p0433 * p2505 / (p0432 * p2504)$
 $p2506 * p0433 * p2505 * p0421 / (p0432 * p2504)$ for multiturn encoders
2. Motor encoder with position tracking for measuring gear:
 $p2506 * p0412 * p2505 / p2504$
3. Motor encoder with position tracking for load gear:
 $p2506 * p2721 * p0433 / p0432$
4. Motor encoder with position tracking for load and measuring gear:
 $p2506 * p2721$
5. Direct encoder without position tracking:
 $p2506 * p0433 / p0432$
 $p2506 * p0433 * p0421 / p0432$ for multiturn encoders
6. Direct encoder with position tracking for measuring gear:
 $p2506 * p0412$
Reaction upon A: NONE
Acknowl. upon A: NONE

F07600 (A) Encoder 2: Adjustment not possible

Message value: Drive data set: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range (-2147483648 ... 2147483647) for displaying the position actual value.
Remedy: If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow.
For rotary encoders, the maximum possible absolute position (LU) is calculated as follows:
1. Motor encoder without position tracking:
 $p2506 * p0433 * p2505 / (p0432 * p2504)$
 $p2506 * p0433 * p2505 * p0421 / (p0432 * p2504)$ for multiturn encoders
2. Motor encoder with position tracking for measuring gear:
 $p2506 * p0412 * p2505 / p2504$
3. Motor encoder with position tracking for load gear:
 $p2506 * p2721 * p0433 / p0432$
4. Motor encoder with position tracking for load and measuring gear:
 $p2506 * p2721$
5. Direct encoder without position tracking:
 $p2506 * p0433 / p0432$
 $p2506 * p0433 * p0421 / p0432$ for multiturn encoders
6. Direct encoder with position tracking for measuring gear:
 $p2506 * p0412$
Reaction upon A: NONE
Acknowl. upon A: NONE

F07601 (A)	Encoder 3: Adjustment not possible
Message value:	Drive data set: %1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The maximum encoder value times the factor to convert the absolute position (r0483 and/or r2723) from increments to length units (LU) has exceeded the value range (-2147483648 ... 2147483647) for displaying the position actual value.
Remedy:	If the value for the maximum possible absolute position (LU) is greater than 4294967296, then it is not possible to make an adjustment due to an overflow. For rotary encoders, the maximum possible absolute position (LU) is calculated as follows: 1. Motor encoder without position tracking: $p2506 * p0433 * p2505 / (p0432 * p2504)$ $p2506 * p0433 * p2505 * p0421 / (p0432 * p2504)$ for multiturn encoders 2. Motor encoder with position tracking for load and measuring gear: $p2506 * p2721$ 5. Direct encoder without position tracking: $p2506 * p0433 / p0432$ $p2506 * p0433 * p0421 / p0432$ for multiturn encoders 6. Direct encoder with position tracking for measuring gear: $p2506 * p0412$
Reaction upon A:	NONE
Acknowled. upon A:	NONE
F07800	Drive: No power unit present
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The power unit parameters cannot be read or no parameters are stored in the power unit. Connection between the Control Unit and the Motor Module was interrupted or is defective. Note: This fault also occurs if an incorrect topology was selected in the commissioning software and this parameterization is then downloaded to the Control Unit. See also: r0200 (Power unit code number actual)
Remedy:	- connect the data line to power unit and restart the Control Unit (POWER ON). - check or replace the Control Unit. - check the cable between the Control Unit and Motor Module. - after correcting the topology, the parameters must be again downloaded using the commissioning software.
F07801	Drive: Motor overcurrent
Message value:	-
Drive object:	SERVO
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The permissible motor limit current was exceeded. - effective current limit set too low. - current controller not correctly set. - motor was braked with an excessively high stall torque correction factor. - V/f operation: Up ramp was set too short or the load is too high. - V/f operation: Short-circuit in the motor cable or ground fault. - V/f operation: Motor current does not match the current of Motor Module. Note: Synchronous motor: Limit current= $1.3 * p0323$ Induction motor: Limit current= $1.3 * r0209$

- Remedy:**
- check the current limits (p0323, p0640).
 - check the current controller (p1715, p1717).
 - reduce the stall torque correction factor (p0326).
 - increase the up ramp (p1318) or reduce the load.
 - check the motor and motor cables for short-circuit and ground fault.
 - check the Motor Module and motor combination.

F07801 Drive: Motor overcurrent

- Message value:** -
- Drive object:** VECTOR
- Reaction:** OFF2 (NONE, OFF1, OFF3)
- Acknowledge:** IMMEDIATELY
- Cause:** The permissible motor limit current was exceeded.
- effective current limit set too low.
 - current controller not correctly set.
 - V/f operation: Up ramp was set too short or the load is too high.
 - V/f operation: Short-circuit in the motor cable or ground fault.
 - V/f operation: Motor current does not match current of power unit.
 - Switch to rotating motor without flying restart function (p1200).
- Note:**
Limit current = $2 * \text{Minimum}(p0640, 4 * p0305) \geq 2 * p0305$
- Remedy:**
- check the current limits (p0640).
 - vector control: Check the current controller (p1715, p1717).
 - V/f control: Check the current limiting controller (p1340 ... p1346).
 - increase the up ramp (p1120) or reduce the load.
 - check the motor and motor cables for short-circuit and ground fault.
 - check the motor for the star-delta configuration and rating plate parameterization.
 - check the power unit and motor combination.
 - Choose "flying restart" function (p1200) if switched to rotating motor.

F07802 Drive: Infeed or power unit not ready

- Message value:** -
- Drive object:** SERVO, VECTOR
- Reaction:** OFF2 (NONE)
- Acknowledge:** IMMEDIATELY
- Cause:** After an internal power-on command, the infeed or drive does not signal ready.
- monitoring time is too short.
 - DC link voltage is not present.
 - associated infeed or drive of the signaling component is defective.
 - supply voltage incorrectly set.
- Remedy:**
- increase the monitoring time (p0857).
 - ensure that there is a DC link voltage. Check the DC link busbar. Enable the infeed.
 - replace the associated infeed or drive of the signaling component.
 - check the line supply voltage setting (p0210).
- See also: p0857 (Power unit monitoring time)

A07805 (N) Infeed: Power unit overload I2t

- Message value:** -
- Drive object:** A_INF, B_INF, S_INF
- Reaction:** NONE
- Acknowledge:** NONE
- Cause:** Alarm threshold for I2t overload (p0294) of the power unit exceeded.
- Remedy:**
- reduce the continuous load.
 - adapt the load duty cycle.
- Reaction upon N: NONE
- Acknowled. upon N: NONE

A07805 (N)	Drive: Power unit overload I2t
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Alarm threshold for I2t overload (p0294) of the power unit exceeded. The response parameterized in p0290 becomes active. See also: p0290 (Power unit overload response)
Remedy:	- reduce the continuous load. - adapt the load duty cycle. - check the assignment of the rated currents of the motor and Motor Module.
Reaction upon N:	NONE
Acknowled. upon N:	NONE
F07810	Drive: Power unit EEPROM without rated data
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	No rated data are stored in the power unit EEPROM. See also: p0205 (Power unit application), r0206 (Rated power unit power), r0207 (Rated power unit current), r0208 (Rated power unit line supply voltage), r0209 (Power unit, maximum current)
Remedy:	Replace the power unit or inform Siemens Customer Service.
F07815	Drive: Power unit has been changed
Message value:	Parameter: %1
Drive object:	A_INF, B_INF, S_INF
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The code number of the actual power unit does not match the saved number. The fault only occurs if the comparator in p9906 or p9908 is not at f 2 (low) or 3 (minimum). Fault value (r0949, interpret decimal): Number of the incorrect parameter. See also: r0200 (Power unit code number actual), p0201 (Power unit code number)
Remedy:	Connect the original power unit and power up the Control Unit again (POWER ON) or set p0201 to r0200 and exit commissioning with p0010 = 0. For infeeds, the following applies: Line reactors or line filters must be used that are specified for the new power unit. A line supply and DC link identification routine (p3410 = 5) must then be carried out. It is not possible to change the power unit without re-commissioning the system if the type of infeed (A_Infeed, B_Infeed, S_Infeed), the type of construction/design (booksize, chassis) or the voltage class differ between the old and new power units. For inverters, the following applies: If the new power unit is accepted, then if required, the current limit p0640 can be reduced by a lower maximum current of the power unit (r0209) (torque limits stay the same). If not only the power unit is changed, but also the motor, then the motor must be re-commissioned (e.g. using p0010 = 1). This is also necessary if motor data is still to be downloaded via DRIVE-CLiQ. See also: r0200 (Power unit code number actual)

F07815	Drive: Power unit has been changed
Message value:	Parameter: %1
Drive object:	SERVO
Reaction:	NONE

A07820	Drive: Temperature sensor not connected
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The temperature sensor for motor temperature monitoring, specified in p0600, is not available. - 10 (SME) is set in p0601, but a value other than 1, 2, or 3 is set in p0600 - 11 (SME) is set in p0601, but a value other than 20 or 21 is set in p0600 - 11 (BICO) is set in p0601, and a sensor is set in p4610 - p4613, but the associated BICO input (p0608, p0609) is not interconnected - module with sensor evaluation not present or has been removed in the meantime. - temperature sensor via Motor Module, not for CU310.

Remedy:

- connect the module with temperature sensor.
- set the available temperature sensor (p0600, p0601).
- set p4610 - p4613 to no sensor (0), or interconnect p0608 and p0609 with an external sensor value (only if BICO (11) is set in p0601)

See also: p0600 (Motor temperature sensor for monitoring), p0601

A07825 (N) Drive: Simulation mode activated

Message value: -

Drive object: VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The simulation mode is activated.
The drive can only be powered up if the DC link voltage is less than 40 V.

Remedy: The alarm automatically disappears if simulation mode is deactivated with p1272 = 0.

Reaction upon N: NONE

Acknowl. upon N: NONE

F07826 Drive: Simulation mode with DC link voltage too high

Message value: -

Drive object: VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The simulation mode is activated and the DC link voltage is greater than the permissible value of 40 V.

Remedy:

- switch out (disable) simulation mode (p1272 = 0) and acknowledge the fault.
- reduce the input voltage in order to reach a DC link voltage below 40 V.

F07840 Drive: Infeed operation missing

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF2 (NONE)

Acknowledge: IMMEDIATELY

Cause: The signal "infeed operation" is not present although the enable signals for the drive have been present for longer than the parameterized monitoring time (p0857).

- infeed not operational.
- interconnection of the binector input for the ready signal is either incorrect or missing (p0864).
- infeed is presently carrying out a line supply identification routine.

Remedy:

- bring the infeed into an operational state.
- check the interconnection of the binector input for the signal "infeed operation" (p0864).
- increase the monitoring time (p0857).
- wait until the infeed has completed the line supply identification routine.

See also: p0857 (Power unit monitoring time), p0864 (Infeed operation)

F07841 (A) Drive: Infeed operation withdrawn

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: The signal "infeed operation" was withdrawn in operation.

- interconnection of the binector input for the signal "infeed operation" is either incorrect or missing (p0864).
- the enable signals of the infeed were disabled.
- due to a fault, the infeed withdraws the signal "infeed operation".

Remedy:

- check the interconnection of the binector input for the "infeed operation" signal (p0864).
- check the enable signals of the infeed and if required, enable.
- remove and acknowledge an infeed fault.

Note:
If this drive is intended to back up the DC link regeneratively, then the fault response must be parameterized for NONE, OFF1 or OFF3. so that the drive can continue to operate even after the infeed fails.

F07890	Internal voltage protection/internal armature short-circuit with Safe Torque Off active
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The internal armature short-circuit (p1231 = 4) is not possible as Safe Torque Off (STO) is enabled. The pulses cannot be enabled.
Remedy:	Switch out the internal armature short-circuit (p1231=0) or deactivate Safe Torque Off (p9501 = p9561 = 0). Note: STO: Safe Torque Off / SH: Safe standstill

F07900 (N, A)	Drive: Motor locked/speed controller at its limit
Message value:	-
Drive object:	SERVO
Reaction:	OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	Motor has been operating at the torque limit longer than the time specified in p2177 and below the speed threshold set in p2175. This signal can also be initiated if the speed actual value is oscillating and the speed controller output repeatedly goes to its limit. See also: p2175, p2177 (Motor locked delay time)
Remedy:	- check that the motor can rotate freely. - check the torque limit: For a positive direction of rotation r1538, for a negative direction of rotation r1539. - check the parameter, message "Motor locked" and if required, correct (p2175, p2177). - check the inversion of the actual value (p0410). - check the motor encoder connection. - check the encoder pulse number (p0408). - for SERVO with encoderless operation and motors with low power ratings (< 300 W), increase the pulse frequency (p1800). - after deselecting the "Basic positioner" (EPOS) function mode, check the motoring (p1528) and regenerative (p1529) torque limit and modify again.

F07900 (N, A)	Drive: Motor blocked
Message value:	-
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	Motor has been operating at the torque limit longer than the time specified in p2177 and below the speed threshold set in p2175. This signal can also be initiated if the speed actual value is oscillating and the speed controller output repeatedly goes to its limit. If the simulation mode is enabled (p1272 = 1) and the closed-loop control with speed encoder activated (p1300 = 21), then the inhibit signal is generated if the encoder signal is not received from a motor that is driven with the torque setpoint of the closed-loop control. See also: p2175, p2177 (Motor locked delay time)
Remedy:	- check that the motor can rotate freely. - check the torque limit: For a positive direction of rotation r1538, for a negative direction of rotation r1539. - check the parameter, message "Motor locked" and if required, correct (p2175, p2177). - check the inversion of the actual value (p0410). - check the motor encoder connection. - check the encoder pulse number (p0408). - for SERVO with encoderless operation and motors with low power ratings (< 300 W), increase the pulse frequency (p1800). - after deselecting the "Basic positioner" (EPOS) function mode, check the motoring (p1528) and regenerative (p1529) torque limit and modify again. - in the simulation mode and operation with speed encoder, the power unit to which the motor is connected must be powered up and must be supplied with the torque setpoint of the simulated closed-loop control. Otherwise, change over to encoderless control (see p1300).

F07901 Drive: Motor overspeed

Message value: -

Drive object: SERVO

Reaction: OFF2 (IASC/DCBRAKE)

Acknowledge: IMMEDIATELY

Cause: The maximum permissible speed was either positively or negatively exceeded.
The maximum permissible positive speed is formed as follows: Minimum (p1082, Cl: p1085) + p2162
The maximum permissible negative speed is formed as follows: Maximum (-p1082, Cl: 1088) - p2162

Remedy: The following applies for a positive direction of rotation:
- check r1084 and if required, correct p1082, Cl:p1085 and p2162.
The following applies for a negative direction of rotation:
- check r1087 and if required, correct p1082, Cl:p1088 and p2162.

F07901 Drive: Motor overspeed

Message value: -

Drive object: VECTOR

Reaction: OFF2 (IASC/DCBRAKE)

Acknowledge: IMMEDIATELY

Cause: The maximum permissible speed was either positively or negatively exceeded.
The maximum permissible positive speed is formed as follows: Minimum (p1082, Cl: p1085) + p2162
The maximum permissible negative speed is formed as follows: Maximum (-p1082, Cl: 1088) - p2162

Remedy: The following applies for a positive direction of rotation:
- check r1084 and if required, correct p1082, Cl:p1085 and p2162.
The following applies for a negative direction of rotation:
- check r1087 and if required, correct p1082, Cl:p1088 and p2162.
Activate pre-control of the speed limiting controller (p1401 bit 7 = 1).
Increase the hysteresis for the overspeed signal p2162. This upper limit is dependent upon the maximum motor speed p0322 and the maximum speed p1082 of the setpoint channel.

F07902 (N, A) Drive: Motor stalled

Message value: %1

Drive object: SERVO

Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: For a vector drive the system has identified that the motor has stall for a time longer than is set in p2178.
Fault value (r0949, interpret decimal):
1: Stall detection using r1408.11 (p1744 or p0492).
2: Stall detection using r1408.12 (p1745).
3: Stall detection using r0056.11 (only for separately excited synchronous motors).
See also: p1744 (Motor model speed threshold stall detection), p2178 (Motor stalled delay time)

Remedy: For closed-loop speed and torque control with speed encoder, the following applies:
- check the speed signal (interrupted cable, polarity, pulse number, broken encoder shaft).
- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the same motor that is controlled for the data set changeover.
If there is no fault, then the fault tolerance (p1744 and p0492) can be increased.
For closed-loop speed and torque control without speed encoder, the following applies:
- check whether the drive in the open-loop controlled mode (r1750.0) stalls under load. If yes, then increase the current setpoint using p1610.
- check whether the drive stalls due to the load if the speed setpoint is still zero. If yes, then increase the current setpoint using p1610.
- if the motor excitation (magnetizing) time (r0346) was significantly reduced, then it should be increased again.
- check the current limits (p0640, r0067). If the current limits are too low, then the drive cannot be magnetized.
- check the current controller (p1715, p1717) and the speed adaptation controller (p1764, p1767). If the dynamic response was significantly reduced, then this should be increased again.
- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the motor that is controlled for the data set changeover.
If there is no fault, then the fault tolerance (p1745) or the delay time (p2178) can be increased.

For separately-excited synchronous motors (closed-loop control with speed encoder), the following applies:

- check the speed signal (interrupted cable, polarity, pulse number).
- ensure the correct motor parameterization (rating plate and equivalent circuit diagram parameters).
- check the excitation equipment and the interface to the closed-loop control.
- encoder the highest possible dynamic response of the closed-loop excitation current control.
- check the speed control for any tendency to oscillate and if resonance effects occur, use a bandstop filter.
- do not exceed the maximum speed (p2162).

If there is no fault, then the delay time can be increased (p2178).

F07902 (N, A) Drive: Motor stalled

Message value: %1

Drive object: VECTOR

Reaction: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause: For a vector drive the system has identified that the motor has stall for a time longer than is set in p2178.

Fault value (r0949, interpret decimal):

1: Stall detection using r1408.11 (p1744 or p0492).

2: Stall detection using r1408.12 (p1745).

3: Stall detection using r0056.11 (only for separately excited synchronous motors).

See also: p1744 (Motor model speed threshold stall detection), p2178 (Motor stalled delay time)

Remedy: It should always be carefully ensured that the motor data identification (p1910) as well as the rotating measurement (p1960) were carried out (also refer to r3925). For synchronous motors with encoder, the encoder must have been adjusted (p1990).

For closed-loop speed and torque control with speed encoder, the following applies:

- check the speed signal (interrupted cable, polarity, pulse number, broken encoder shaft).

- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the same motor that is controlled for the data set changeover.

If there is no fault, then the fault tolerance (p1744 and p0492) can be increased.

If the stalled motor should take place in the range of the monitor model and for speeds of less than 30 % of the rated motor speed, then a change can be made directly from the current model into the flux impression (p1401.5 = 1). We therefore recommend that the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 * p0311; p1753 = 5 %).

For closed-loop speed and torque control without speed encoder, the following applies:

- Check whether the drive stalls solely due to the load in controlled mode (r1750.0) or when the speed setpoint is still zero. If so, increase the current setpoint via p1610 or set p1750 bit 2 = 1 (encoderless vector control to standstill for passive loads).

- If the motor excitation time (p0346) was significantly reduced and the drive stalls when it is switched on and run immediately, p0346 should be increased again or quick magnetizing selected (p1401).

- Check the current limits (p0640, r0067, r0289). If the current limits are too low, then the drive cannot be magnetized.

- check the current controller (p1715, p1717) and the speed adaptation controller (p1764, p1767). If the dynamic response was significantly reduced, then this should be increased again.

- check the speed encoder, if another speed encoder was selected using the data set changeover. This must be connected to the motor that is controlled for the data set changeover.

If there is no fault, then the fault tolerance (p1745) or the delay time (p2178) can be increased.

The following generally apply for closed-loop and torque control:

- Check whether the motor cables are disconnected.

- If the fault occurs with fault value 2 when the motor accelerates very quickly to the field weakening range, the deviation between the flux setpoint and actual value can be reduced and, in turn, the fault message prevented, by reducing p1596.

For separately-excited synchronous motors (closed-loop control with speed encoder), the following applies:

- check the speed signal (interrupted cable, polarity, pulse number).

- ensure the correct motor parameterization (rating plate and equivalent circuit diagram parameters).

- check the excitation equipment and the interface to the closed-loop control.

- encoder the highest possible dynamic response of the closed-loop excitation current control.

- check the speed control for any tendency to oscillate and if resonance effects occur, use a bandstop filter.

- do not exceed the maximum speed (p2162).

If there is no fault, then the delay time can be increased (p2178).

A07903 Drive: Motor speed deviation

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The absolute value of the speed difference from the two setpoints (p2151, p2154) and the speed actual value (r2169) exceeds the tolerance threshold (p2163) longer than tolerated (p2164, p2166).
 The alarm is only enabled for p2149.0 = 1.
 Possible causes could be:
 - the load torque is greater than the torque setpoint.
 - when accelerating, the torque/current/power limit is reached. If the limits are not sufficient, then it is possible that the drive has been dimensioned too small.
 - for closed-loop torque control, the speed setpoint does not track the speed actual value.
 - for active Vdc controller.
 For V/f control, the overload condition is detected as the I_{max} controller is active.
 See also: p2149 (Monitoring configuration)
Remedy:
 - increase p2163 and/or p2166.
 - increase the torque/current/power limits.
 - for closed-loop torque control: The speed setpoint should track the speed actual value.
 - deactivate alarm with p2149.0 = 0.

A07904 (N) External armature short-circuit: Contactor feedback signal "Closed" missing

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When closing, the contactor feedback signal (p1235) did not issue the signal "Closed" (r1239.1 = 1) within the monitoring time (p1236).
Remedy:
 - check that the contactor feedback signal is correctly connected (p1235).
 - check the logic of the contactor feedback signal (r1239.1 = 1: "Closed", r1239.1 = 0: "Open").
 - increase the monitoring time (p1236).
 - if required, set the external armature short-circuit without contactor feedback signal (p1231=2).
 Reaction upon N: NONE
 Acknowl. upon N: NONE

F07905 (N, A) External armature short-circuit: Contactor feedback signal "Open" missing

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2 (NONE)

F07906	Armature short-circuit / internal voltage protection: Parameterization error
Message value:	Fault cause: %1, motor data set: %2
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The armature short-circuit is incorrectly parameterized. Fault value (r0949, interpret decimal): Low word: Motor data set number High word: Cause: 1: A permanent-magnet synchronous motor has not been selected. 2: No induction motor selected. 101: External armature short-circuit: Output (r1239.0) not connected up. 102: External armature short-circuit with contactor feedback signal: No feedback signal connected (BI:p1235). 103: External armature short-circuit without contactor feedback signal: Delay time when opening (p1237) is 0. 201: Internal voltage protection: The maximum output current of the Motor Module (r0209) is less than 1.8 * motor short-circuit current (r0331). 202: Internal voltage protection: A Motor Module in booksize or chassis format is not being used. 203: Internal voltage protection: The motor short-circuit current (p0320) is greater than the maximum motor current (p0323). 204: Internal voltage protection: The activation (p1231 = 4) is not given for all motor data sets with synchronous motors (p0300 = 2xx, 4xx).
Remedy:	Re cause 1: - an armature short-circuit / voltage protection is only permissible for permanent-magnetic synchronous motors. The highest position of the motor type in p0300 must either be 2 or 4. Re cause 101: - the contactor for the external armature short-circuit configuration should be controlled using output signal r1239.0. The signal can, e.g. be connected to an output terminal BI: p0738. Before this fault can be acknowledged, p1231 must be set again. Re cause 102: - if the external armature short-circuit with contactor feedback signal (p1231 = 1) is selected, this feedback signal must be connected to an input terminal (e.g. r722.x) and then connected to BI: p1235. - alternatively, the external armature short-circuit without contactor feedback signal (p1231 = 2) can be selected. Re cause 103: - if the external armature short-circuit without contactor feedback signal (p1231 = 2) is selected, then a delay time must be parameterized in p1237. This time must always be greater than the actual contactor opening time, as otherwise the Motor Module would be short-circuited! Re cause 201: - a Motor Module with a higher maximum current or a motor with a lower short-circuit current must be used. The maximum Motor Module current must be higher than 1.8 * short-circuit current of the motor. Re cause 202: - for internal voltage protection, use a Motor Module in booksize or chassis format. Re cause 203: - for internal voltage protection, only use short-circuit proof motors. Re cause 204: - The internal voltage protection must either be activated for all motor data sets with synchronous motors (p0300 = 2xx, 4xx) (p1231 = 3) or it must be deactivated for all motor data sets (p1231 not equal to 3). This therefore ensures that the protection cannot be accidentally withdrawn as a result of a data set changeover. The fault can only be acknowledged if this condition is fulfilled.

F07907	Internal armature short-circuit: Motor terminals are not at zero potential after pulse suppression
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The function "Internal voltage protection" (p1231 = 3) was activated. The following must be observed: - when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)! - it is only permissible to use motors that are short-circuit proof (p0320 < p0323). - the Motor Module must be able to continually conduct 180% short-circuit current (r0331) of the motor (r0289). - the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor. - if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components. - if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module. - if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).
Remedy:	None necessary. This a note for the user.
A07908	Internal armature short-circuit active
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The Motor Module signals that the motor is short-circuited through the power semiconductors (r1239.5 = 1). The pulses cannot be enabled. The internal armature short-circuit is selected (p1231 = 4):
Remedy:	For synchronous motors, the armature short-circuit braking is activated if a 1 signal is present via binector input p1230. See also: p1230 (Armature short-circuit / DC brake activation), p1231 (Armature short-circuit / DC brake configuration)
F07909	Internal voltage protection: Deactivation only effective after POWER ON
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	POWER ON
Cause:	The deactivation of the internal voltage protection (p1231 not equal to 3) only becomes effective after POWER ON. The status signal r1239.6 = 1 indicates that the internal voltage protection is ready.
Remedy:	None necessary. This a note for the user.

A07910 (N)	Drive: Motor overtemperature
Message value:	%1
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	KTY: The motor temperature has exceeded the fault threshold (p0604 or p0616). VECTOR: The response parameterized in p0610 becomes active. PTC: The response threshold of 1650 Ohm was exceeded. Alarm value (r2124, interpret decimal): SME not selected in p0601: 1: No output current reduction. 2: Output current reduction active. With SME (p0601 = 10), TM120 (p0601 = 11) selected: Number of the sensor channel leading to the message. See also: p0604 (Motor temperature alarm threshold), p0610 (Motor overtemperature response)
Remedy:	- check the motor load. - check the motor ambient temperature. - check KTY84.
Reaction upon N:	NONE
Acknowl. upon N:	NONE

A07910 (N)	Drive: Motor overtemperature
Message value:	%1
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	KTY or no sensor: The measured motor temperature or temperature of the thermal model has exceeded the alarm threshold (p0604 or p0616). The response parameterized in p0610 becomes active. PTC or bimetallic NC contact: The response threshold of 1650 Ohm was exceeded or the NC contact opened. Alarm value (r2124, interpret decimal): SME not selected in p0601: 1: No output current reduction. 2: Output current reduction active. SME or TM120 selected in p0601 (p0601 = 10, 11): The number specifies the sensor channel that resulted in the alarm being output. See also: p0604 (Motor temperature alarm threshold), p0610 (Motor overtemperature response)
Remedy:	- check the motor load. - check the motor ambient temperature. - check KTY84.
Reaction upon N:	NONE
Acknowl. upon N:	NONE

F07913	Excitation current outside the tolerance range
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The difference between the excitation current actual value and setpoint has exceeded the tolerance: $\text{abs}(r1641 - r1626) > p3201 + p3202$ The cause of this fault is again reset for $\text{abs}(r1641 - r1626) < p3201$.
Remedy:	- check the parameterization (p1640, p3201, p3202). - check the interfaces to the excitation equipment (r1626, p1640). - check the excitation equipment.

F07914	Flux out of tolerance
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The difference between the flux actual value and setpoint has exceeded the tolerance: $\text{abs}(r0084 - r1598) > p3204 + p3205$ The cause of this fault is again reset for $\text{abs}(r0084 - r1598) < p3204$. The fault is only issued after the delay time in p3206 has expired.
Remedy:	- check the parameterization (p3204, p3205). - check the interfaces to the excitation equipment (r1626, p1640). - check the excitation equipment. - check the flux control (p1592, p1592, p1597). - check the control for oscillation and take the appropriate counter measures (e.g. optimize the speed control loop, parameterize a bandstop filter).
A07918 (N)	Three-phase setpoint generator operation selected/active
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Only for separately excited synchronous motors (p0300 = 5): The actual open-loop/closed-loop control mode is I/f control (open-loop) with a fixed current (p1300 = 18). The speed is entered via the setpoint channel and the current setpoint is given by the minimum current (p1620). It must be ensured that in this mode, the control dynamic performance is very limited. This is the reason that longer ramp-up times should be set for the setpoint speed than for normal operation. See also: p1620 (Stator current, minimum)
Remedy:	Select another open-loop/closed-loop control mode See also: p1300 (Open-loop/closed-loop control operating mode)
Reaction upon N:	NONE

Cause: The torque deviates from the torque/speed envelope characteristic.
Remedy: Check the connection between the motor and load.
Adapt the parameterization according to the load.

F07923 Drive: Torque/speed too low

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The torque deviates from the torque/speed envelope characteristic (too low).
Remedy: Check the connection between the motor and load.
Adapt the parameterization according to the load.

F07924 Drive: Torque/speed too high

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The torque deviates from the torque/speed envelope characteristic (too high).
Remedy: Check the connection between the motor and load.
Adapt the parameterization according to the load.

F07925 Drive: Torque/speed out of tolerance

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The torque deviates from the torque/speed envelope characteristic.
Remedy: Check the connection between the motor and load.
Adapt the parameterization according to the load.

A07926 Drive: Envelope curve, parameter invalid

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Invalid parameter values were entered for the envelope characteristic of the load monitoring.
The following rules apply for the speed thresholds:
p2182 < p2183 < p2184
The following rules apply for the torque thresholds:
p2185 > p2186
p2187 > p2188
p2189 > p2190
Alarm value (r2124, interpret decimal):
Number of the parameter with the invalid value.
Remedy: Set the parameters for the load monitoring according to the applicable rules or deactivate load monitoring (p2181 = 0; p2193 = 0).

A07927	DC brake active
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The motor is braked with a DC current, the DC current brake is active. 1) An alarm with response DCBRAKE is active. The motor is braked with the braking current set in p1232 for the duration set in in p1233. If the standstill threshold p1226 is undershot, then braking is prematurely canceled. 2) DC braking has been activated at binector input p1230 with the DC brake set (p1230 = 4). Braking current p1232 is injected until this binector input becomes inactive.
Remedy:	None necessary.
F07928	Internal voltage protection initiated
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The Motor Module signals that the motor is short-circuited through the power semiconductors (r1239.5 = 1). The pulses cannot be enabled. The internal voltage protection is selected (p1231 = 3).
Remedy:	If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module automatically decides - using the DC link voltage - as to whether the armature short-circuit should be activated. The armature short-circuit is activated and response OFF2 is initiated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the armature short-circuit is withdrawn. If the motor is still in a critical speed range, the armature short-circuit is reactivated once the DC link voltage exceeds the threshold of 800 V. If the autonomous (independent) internal voltage protection is active (r1239.5 = 1) and the line supply returns (450 V < DC link voltage < 800 V), the armature short-circuit is withdrawn after 3 minute.
F07930	Drive: Brake control error
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The Control Unit has detected a brake control error. Fault value (r0949, interpret decimal): 10, 11: Fault in "open holding brake" operation. - No brake connected or wire breakage (check whether brake releases for p1278 = 1). - Ground fault in brake cable. 20: Fault in "brake open" state. - Short-circuit in brake winding. 30, 31: Fault in "close holding brake" operation. - No brake connected or wire breakage (check whether brake releases for p1278 = 1). - Short-circuit in brake winding. 40: Fault in "brake closed" state. 50: Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control). Note: The following causes may apply to fault values: - motor cable is not shielded correctly. - defect in control circuit of the Motor Module. See also: p1278 (Brake control, diagnostics evaluation)

Remedy:

- check the motor holding brake connection.
- check the function of the motor holding brake.
- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.
- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).
- replace the Motor Module involved.

Operation with Safe Brake Module:

- check the Safe Brake Modules connection.
- replace the Safe Brake Module.

See also: p1215 (Motor holding brake configuration), p1278 (Brake control, diagnostics evaluation)

A07931 (F, N) Brake does not open

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: This alarm is output for r1229.4 = 1.
See also: p1216 (Motor holding brake, opening time), r1229 (Motor holding brake status word)

Remedy:

- check the functionality of the motor holding brake.
- check the feedback signal (p1223).

Reaction upon F: NONE (OFF1, OFF2, OFF3)

Acknowl. upon F: IMMEDIATELY

Reaction upon N: NONE

Acknowl. upon N: NONE

A07932 Brake does not close

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: This alarm is output for r1229.5 = 1.
For r1229.5 = 1, OFF/OFF3 are suppressed to prevent the drive accelerating by a load that drives the motor - whereby OFF2 remains effective.
See also: p1217 (Motor holding brake closing time), r1229 (Motor holding brake status word)

Remedy:

- check the functionality of the motor holding brake.
- check the feedback signal (p1222).

F07934 (N) Drive: S120 Combi motor holding brake configuration

Message value: %1

Drive object: All objects

Reaction: Infeed: OFF2 (NONE, OFF1)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: A connected motor holding brake has been detected with an S120 Combi unit. However, this motor holding brake has not been assigned to just one Combi feed drive and, therefore, brake control is not configured (correctly).
Fault value (r0949, interpret decimal):
0: No motor holding brake assigned (p1215 = 0 or 3 on all S120 Combi feed drives)
1: Multiple holding brakes assigned (p1215 = 1 or 2 on more than one S120 Combi feed drive)
MHB: Motor holding brake.

Remedy: Check whether the motor holding brake has been assigned to one S120 Combi feed drive exclusively (p1215 = 1 or 2).
The fault will only be withdrawn once the motor holding brake has been assigned to just one of the S120 Combi feed drives (p1215 = 1 or 2 for this one drive). From this point, the motor holding brake will be controlled by this drive.
See also: p1215 (Motor holding brake configuration)

Reaction upon N: NONE

Acknowl. upon N: NONE

F07935 (N) Drv: Motor holding brake detected

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: A motor holding brake was detected where the brake control has not been configured (p1215 = 0). The brake control configuration was then set to "motor holding brake the same as sequence control" (p1215 = 1).

Remedy: None necessary.
See also: p1215 (Motor holding brake configuration)

Reaction upon N: NONE

Acknowl. upon N: NONE

F07937 (N) Drive: Speed deviation between motor model and external speed

Message value: -

Drive object: VECTOR

Reaction: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY

Cause: The absolute value of the speed difference from the two actual values (r2169, r1443) exceeds the tolerance threshold (p3236) for longer than the time set in p3238.

Possible causes could be:

- External encoder signal wired incorrectly (p1440)
 - Speed encoder for external encoder signal faulty
 - Encoder signal's polarity or gain incorrect
 - Smoothing time constant for model speed for monitoring p2157 too high
 - Smoothing time constant or threshold values for monitoring too low (p3236, p3238)
- See also: p2149 (Monitoring configuration)

Remedy: - Check that the external speed (see p1440, r1443) matches the motor speed.
- Check the polarity of the external speed (r1443).
- Check connector connection p1440.

Reaction upon N: NONE

Acknowl. upon N: NONE

F07940 Sync-line-drive: Synchronization error

Message value: -

Drive object: VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: After synchronization has been completed, the phase difference (r3808) is greater than the threshold value, phase synchronism (p3813).

OFF1 or OFF3 response, while the closed-loop phase control is active (r3819.6 = 1) or synchronism reached (r3819.2 = 1).

Enable signal withdrawn (p3802 = 0), while the closed-loop phase control was active (r3819.6 = 1).

Remedy: If required increase the threshold value phase synchronism (p3813) for synchronizing the line supply to the drive.
Before OFF1 or OFF3, complete synchronizing (r3819.0 = 0).
Before withdrawing the enable signal (p3802 = 0), reach synchronism (r3819.2 = 1).
See also: p3813 (Sync-line-drive phase synchronism threshold value)

A07941	Sync-line-drive: Target frequency not permissible
Message value:	Parameter: %1
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The target frequency is outside the permissible value range. Alarm value (r2124, interpret decimal): 1084: Target frequency greater than the positive speed limit, $f_{\text{sync}} > f_{\text{max}}$ (r1084). 1087: Target frequency less than the negative speed limit, $f_{\text{sync}} < f_{\text{min}}$ (r1087).
Remedy:	Fulfill the conditions for the target frequency for line-drive synchronization. See also: r1084, r1087

A07942	Sync-line-drive: Setpoint frequency is completely different than the target frequency
Message value:	-
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	There is a considerable difference between the setpoint frequency and the target frequency ($f_{\text{set}} \neq f_{\text{target}}$). The deviation that can be tolerated is set in p3806.
Remedy:	The alarm automatically disappears after the difference that can be tolerated between the setpoint and target frequencies (p3806) is reached. See also: p3806 (Sync-line-drive frequency difference threshold value)

A07943	Sync-line-drive: Synchronization not permitted
Message value:	Parameter: %1
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Synchronization is not permitted. Alarm value (r2124, interpret decimal): 1300: The control mode (p1300) has not been set to encoderless closed-loop speed control or V/f characteristic. 1910: Motor data identification activated. 1960: Speed controller optimization activated. 1990: Encoder adjustment activated. 3801: Voltage Sensing Module (VSM) not found. 3845: Friction characteristic record activated.
Remedy:	Fulfill the conditions for the line-drive synchronization. Re alarm value = 1300: Set the control mode (p1300) to encoderless closed-loop speed control (p1300 = 20) or V/f characteristic (p1300 = 0 ... 19). Re alarm value = 1910: Exit the motor data identification routine (p1910). Re alarm value = 1960: Exit the speed controller optimization routine (p1960). Re alarm value = 1990: Exit the encoder adjustment (p1990). Re alarm value = 3801: Connect-up a Voltage Sensing Module (VSM) and when connecting to an adjacent drive object ensure that the drive objects have the same basis clock cycle. Re alarm value = 3845: Exit the friction characteristic record (p3845).

F07950 (A)	Drive: Incorrect motor parameter
Message value:	Parameter: %1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	- the motor parameters were incorrectly entered while commissioning (e.g. p0300 = 0, no motor) - The braking resistor (p6811) has still not been parameterized - commissioning cannot be completed. Fault value (r0949, interpret decimal): The parameter number involved. See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0315, p0316, p0320, p0322, p0323
Remedy:	Compare the motor data with the rating plate data and if required, correct. See also: p0300, p0301, p0304, p0305, p0307, p0310, p0311, p0314, p0316, p0320, p0322, p0323
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F07955	Drive: Motor has been changed
Message value:	Parameter: %1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The code number of the actual motor with DRIVE-CLiQ does not match the saved number. Fault value (r0949, interpret decimal): Number of the incorrect parameter. See also: p0301 (Motor code number selection), r0302 (Motor code number of motor with DRIVE-CLiQ)
Remedy:	Connect the original motor, power up the Control Unit again (POWER ON) and exit the quick commissioning by setting p0010 to 0. Or set p0300 = 10000 (load the motor parameter with DRIVE-CLiQ) and re-commission. Quick commissioning (p0010 = 1) is automatically exited with p3900 > 0. If quick commissioning was exited by setting p0010 to 0, then an automatic controller calculation (p0340 = 1) is not carried out.
F07956 (A)	Drive: Motor code does not match the list (catalog) motor
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The motor code of the connected motor with DRIVE-CLiQ does not match the possible list motor types (see selection in p0300). The connected motor with DRIVE-CLiQ might not be supported by this firmware version. Fault value (r0949, interpret decimal): Motor code of the connected motor with DRIVE-CLiQ. Note: The first three digits of the motor code generally correspond to the list motor type.
Remedy:	Use a motor with DRIVE-CLiQ and the matching motor code.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

A07960 Drive: Incorrect friction characteristic

Message value: Parameter: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The friction characteristic is incorrect.
Alarm value (r2124, interpret decimal):
1538:
The friction torque is greater than the maximum from the upper effective torque limit (p1538) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value.
1539:
The friction torque is less than the minimum from the lower effective torque limit (p1539) and zero. This is the reason that the output of the friction characteristic (r3841) is limited to this value.
3820 ... 3829:
Incorrect parameter number. The speeds entered in the parameters for the friction characteristic do not correspond to the following condition:
 $0.0 < p3820 < p3821 < \dots < p3829 \leq p0322$ or $p1082$, if $p0322 = 0$
Therefore the output of the friction characteristic (r3841) is set to zero.
3830 ... 3839:
Incorrect parameter number. The torques entered in the parameters for the friction characteristic do not correspond to the following condition:
 $0 \leq p3830, p3831 \dots p3839 \leq p0333$
Therefore the output of the friction characteristic (r3841) is set to zero.
See also: r3840 (Friction characteristic, status word)
Remedy: Fulfill the conditions for the friction characteristic.
Re alarm value = 1538:
Check the upper effective torque limit (e.g. in the field weakening range).
Re alarm value = 1539:
Check the lower effective torque limit (e.g. in the field weakening range).
Re alarm value = 3820 ... 3839:
Fulfill the conditions to set the parameters of the friction characteristic.
If the motor data (e.g. the maximum speed p0322) are changed during commissioning ($p0010 = 1, 3$), then the technological limits and threshold values, dependent on this, must be recalculated by selecting $p0340 = 5$.

A07961 Drive: Friction characteristic record activated

Message value: -
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The automatic friction characteristic record is activated.
The friction characteristic is recorded at the next power-on command.
Remedy: None necessary.
The alarm disappears automatically after the friction characteristic record has been successfully completed or the record is deactivated ($p3845 = 0$).

F07963	Drive: Friction characteristic record interrupted
Message value:	Parameter: %1
Drive object:	SERVO, VECTOR
Reaction:	OFF1
Acknowledge:	IMMEDIATELY
Cause:	The conditions to record the friction characteristic are not fulfilled. Fault value (r0949, interpret decimal): 0046: Missing enable signals (r0046). 1082: The highest speed value to be approached (p3829) is greater than the maximum speed (p1082). 1084: The highest speed value to be approached (p3829) is greater than the maximum speed (r1084, p1083, p1085). 1087: The highest speed value to be approached (p3829) is greater than the maximum speed (r1087, p1086, p1088). 1110: Friction characteristic record, negative direction selected (p3845) and negative direction inhibited (p1110). 1111: Friction characteristic record, positive direction selected (p3845) and positive direction inhibited (p1111). 1198: Friction characteristic record selected (p3845 > 0) and negative (p1110) and positive directions (p1111) inhibited (r1198). 1300: The control mode (p1300) has not been set to closed-loop speed control. 1755: For encoderless closed-loop control (p1300 = 20), the lowest speed value to be approached (p3820) is less than or equal to the changeover speed, open-loop controlled operation (p1755). 1910: Motor data identification activated. 1960: Speed controller optimization activated. 3820 ... 3829: Speed (p382x) cannot be approached. 3840: Friction characteristic incorrect. 3845: Friction characteristic record deselected.
Remedy:	Fulfill the conditions to record the friction characteristic. Re fault value = 0046: Establish missing enable signals. Re fault value = 1082, 1084, 1087: Select the highest speed value to be approached (p3829) less than or equal to the maximum speed (p1082, r1084, r1087). Recalculate the speed points along the friction characteristic (p0340 = 5). Re fault value = 1110: Select the friction characteristic record, positive direction (p3845). Re fault value = 1111: Select the friction characteristic record, negative direction (p3845). Re fault value = 1198: Enable the permitted direction (p1110, p1111, r1198). Re fault value = 1300: Set the control mode (p1300) on the closed-loop speed control (p1300 = 20, 21). Re fault value = 1755: For encoderless closed-loop speed control (p1300 = 20) select the lowest speed value to be approached (p3820) greater than the changeover speed of open-loop controlled operation (p1755). Recalculate the speed points along the friction characteristic (p0340 = 5). Re fault value = 1910: Exit the motor data identification routine (p1910). Re fault value = 1960: Exist the speed controller optimization routine (p1960). Re fault value 3820 ... 3829: - check the load at speed p382x. - check the speed signal (r0063) for oscillation at speed p382x. Check the settings of the speed controller if applicable. Re fault value = 3840: Make the friction characteristic error-free (p3820 to p3829, p3830 to p3839, p3840). Re fault value = 3845: Activate the friction characteristic record (p3845).

A07965 (N)	Drive: Save required
Message value:	-
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The angular commutation offset (p0431) was re-defined and has still not been saved. In order to permanently accept the new value, it must be saved in a non-volatile fashion (p0971, p0977). See also: p0431 (Angular commutation offset), p1990 (Encoder adjustment, determine angular commutation offset)
Remedy:	None necessary. This alarm automatically disappears after the data has been saved. See also: p0971 (Save drive object parameters), p0977 (Save all parameters)
Reaction upon N:	NONE
Acknowled. upon N:	NONE

F07966	Drive: Check the commutation angle
Message value:	-
Drive object:	SERVO
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	The speed actual value was inverted and the associated angular commutation offset is not equal to zero and is therefore possibly incorrect.
Remedy:	Angular commutation offset after the actual value inversion or determine it again (p1990=1).

F07967	Drive: Automatic encoder adjustment incorrect
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the automatic encoder adjustment or the pole position identification. Only for internal Siemens troubleshooting.
Remedy:	Carry out a POWER ON.

F07968	Drive: Lq-Ld measurement incorrect
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the Lq-Ld measurement. Fault value (r0949, interpret decimal): 10: Stage 1: The ratio between the measured current and zero current is too low. 12: Stage 1: The maximum current was exceeded. 15: Second harmonic too low. 16: Drive converter too small for the measuring technique. 17: Abort due to pulse inhibit.
Remedy:	Re fault value = 10: Check whether the motor is correctly connected. Replace the power unit involved. Deactivate technique (p1909). Re fault value = 12: Check whether motor data have been correctly entered. Deactivate technique (p1909). Re fault value = 16: Deactivate technique (p1909). Re fault value = 17: Repeat technique.

F07969	Drive: Incorrect pole position identification
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the pole position identification routine. Fault value (r0949, interpret decimal): 1: Current controller limited 2: Motor shaft locked. 4: Encoder speed signal not plausible. 10: Stage 1: The ratio between the measured current and zero current is too low. 11: Stage 2: The ratio between the measured current and zero current is too low. 12: Stage 1: The maximum current was exceeded. 13: Stage 2: The maximum current was exceeded. 14: Current difference to determine the +d axis too low. 15: Second harmonic too low. 16: Drive converter too small for the measuring technique. 17: Abort due to pulse inhibit. 18: First harmonic too low. 20: Pole position identification requested with the motor shaft rotating and activated flying restart function.
Remedy:	Re fault value = 1: Check whether the motor is correctly connected. Check whether motor data have been correctly entered. Replace the Motor Module involved. Re fault value = 2: Open the motor holding brake (p1215 = 2) and bring the motor into a no-load condition. Re fault value = 4: Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct. Check whether the motor pole pair number is correct (p0314). Re fault value = 10: When selecting p1980 = 4: Increase the value for p0325. When selecting p1980 = 1: Increase the value for p0329. Check whether the motor is correctly connected. Replace the Motor Module involved. Re fault value = 11: Increase the value for p0329. Check whether the motor is correctly connected. Replace the Motor Module involved. Re fault value = 12: When selecting p1980 = 4: Reduce the value for p0325. When selecting p1980 = 1: Reduce the value for p0329. Check whether motor data have been correctly entered. Re fault value = 13: Reduce the value for p0329. Check whether motor data have been correctly entered. Re fault value = 14: Increase the value for p0329. Re fault value = 15: Increase the value for p0325. Motor not sufficiently anisotropic, change the technique (p1980 = 1 or 10). Re fault value = 16: Deactivate technique (p1982). Re fault value = 17: Repeat technique. Re fault value = 18: Increase the value for p0329. Saturation not sufficient, change the technique (p1980 = 10). Re fault value = 20: Before carrying out a pole position identification routine ensure that the motor shaft is absolutely stationary (zero speed).

F07970	Drive: Automatic encoder adjustment incorrect
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2 (NONE)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the automatic encoder adjustment. Fault value (r0949, decimal): 1: Current controller limited 2: Motor shaft locked. 4: Encoder speed signal not plausible. 10: Stage 1: The ratio between the measured current and zero current is too low. 11: Stage 2: The ratio between the measured current and zero current is too low. 12: Stage 1: The maximum current was exceeded. 13: Stage 2: The maximum current was exceeded. 14: Current difference to determine the +d axis too low. 15: Second harmonic too low. 16: Drive converter too small for the measuring technique. 17: Abort due to pulse inhibit.
Remedy:	Re fault value = 1: Check whether the motor is correctly connected. Check whether motor data have been correctly entered. Replace the power unit involved. Re fault value = 2: Open the motor holding brake (p1215 = 2) and bring the motor into a no-load condition. Re fault value = 4: Check whether the speed actual value inversion is correct (p0410.0). Check whether the motor is correctly connected. Check whether the encoder pulse number (p0408) and gearbox factor (p0432, p0433) are correct. Check whether the motor pole pair number is correct (p0314). Re fault value = 10: Increase the value for p0325. Check whether the motor is correctly connected. Replace the power unit involved. Re fault value = 11: Increase the value for p0329. Check whether the motor is correctly connected. Replace the power unit involved. Re fault value = 12: Reduce the value for p0325. Check whether motor data have been correctly entered. Re fault value = 13: Reduce the value for p0329. Check whether motor data have been correctly entered. Re fault value = 14: Increase the value for p0329. Re fault value = 15: Increase the value for p0325. Re fault value = 16: Deactivate technique (p1982). Re fault value = 17: Repeat technique.

A07971 (N)	Drive: Angular commutation offset determination activated
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The automatic determination of the angular commutation offset (encoder adjustment) is activated (p1990 = 1). The automatic determination is carried out at the next power-on command. For SERVO and fault F07414 present, the following applies: The determination of the angular commutation offset is automatically activated (p1990 = 1), if a pole position identification technique is set in p1980. See also: p1990 (Encoder adjustment, determine angular commutation offset)
Remedy:	None necessary. The alarm automatically disappears after determination or for the setting p1990 = 0.
Reaction upon N:	NONE
Acknowled. upon N:	NONE
A07980	Drive: Rotating measurement activated
Message value:	-
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The rotating measurement is activated. For the rotating measurement, the motor can accelerate up to the maximum speed and with maximum torque. Only the parameterized current limit (p0640) and the maximum speed (p1082) are effective. The behavior of the motor can be influenced using the direction inhibit (p1959.14, p1959.15) and the ramp-up/ramp-down time (p1958). The rotating measurement is carried out at the next power-on command. See also: p1960
Remedy:	None necessary. The alarm automatically disappears after the rotating measurement has been successfully completed or for the setting p1960 = 0. If a POWER ON or a warm restart is performed with motor data identification selected, the motor data identification request will be lost. If motor data identification is required, it will need to be selected again manually following ramp-up.
A07980	Drive: Rotating measurement activated
Message value:	-
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The rotating measurement (automatic speed controller optimization) is activated. The rotating measurement is carried out at the next power-on command. See also: p1960
Remedy:	None necessary. The alarm disappears automatically after the speed controller optimization has been successfully completed or for the setting p1900 = 0.
A07981	Drive: Enable signals for the rotating measurement missing
Message value:	-
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The rotating measurement cannot be started due to missing enable signals.
Remedy:	- acknowledge faults that are present. - establish missing enable signals. See also: r0002, r0046

F07982 Drive: Rotating measurement encoder test

Message value:	%1
Drive object:	VECTOR
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the encoder test. Fault value (r0949, interpret decimal): 1: The speed did not reach a steady-state condition. 2: The speed setpoint was not able to be approached as the minimum limiting is active. 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. 4: The speed setpoint was not able to be approached as the maximum limiting is active. 5: The encoder does not supply a signal. 6: Incorrect polarity. 7: Incorrect pulse number. 8: Noise in the encoder signal or speed controller unstable. 9: Voltage Sensing Module (VSM) incorrectly connected.
Remedy:	Re fault value = 1: - check the motor parameters. - carry out a motor data identification routine (p1910). - if required, reduce the dynamic factor (p1967 < 25 %). Re fault value = 2: - adapt the speed setpoint (p1965) or adapt the minimum limit (p1080). Re fault value = 3: - adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101). Re fault value = 4: - adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086). Re fault value = 5: - check the encoder connection. If required, replace the encoder. Re fault value = 6: - check the connection assignment of the encoder cable. Adapt the polarity (p0410). Re fault value = 7: - adapt the pulse number (p0408). Re fault value = 8: - check the encoder connection and encoder cable. It is possible that there is a problem associated with the ground connection. - reduce the dynamic response of the speed controller (p1460, p1462 and p1470, p1472). Re fault value = 9: - check the connections of the Voltage Sensing Module (VSM). Note: The encoder test can be switched out (disabled) using p1959.0. See also: p1959

F07983 Drive: Rotating measurement saturation characteristic

Message value:	%1
Drive object:	VECTOR
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred while determining the saturation characteristic. Fault value (r0949, interpret decimal): 1: The speed did not reach a steady-state condition. 2: The rotor flux did not reach a steady-state condition. 3: The adaptation circuit did not reach a steady-state condition. 4: The adaptation circuit was not enabled. 5: Field weakening active. 6: The speed setpoint was not able to be approached as the minimum limiting is active. 7: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. 8: The speed setpoint was not able to be approached as the maximum limiting is active. 9: Several values of the determined saturation characteristic are not plausible. 10: Saturation characteristic could not be sensibly determined because load torque too high.

Remedy:

Re fault value = 1:

- the total drive moment of inertia is far higher than that of the motor (p0341, p0342).

Deselect rotating measurement (p1960), enter the moment of inertia p0342, recalculate the speed controller p0340 = 4 and repeat the measurement.

Re fault value = 1 ... 2:

- increase the measuring speed (p1961) and repeat the measurement.

Re fault value = 1 ... 4:

- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

Re fault value = 5:

- the speed setpoint (p1961) is too high. Reduce the speed.

Re fault value = 6:

- adapt the speed setpoint (p1961) or minimum limiting (p1080).

Re fault value = 7:

- adapt the speed setpoint (p1961) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

Re fault value = 8:

- adapt the speed setpoint (p1961) or maximum limit (p1082, p1083 and p1086).

Re fault value = 9, 10:

- the measurement was carried out at an operating point where the load torque is too high. Select a more suitable operating point, either by changing the speed setpoint (p1961) or by reducing the load torque. The load torque may not be varied while making measurements.

Note:

The saturation characteristic identification routine can be disabled using p1959.1.

F07984	Drive: Speed controller optimization, moment of inertia
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred while identifying the moment of inertia. Fault value (r0949, interpret decimal): 1: The speed did not reach a steady-state condition. 2: The speed setpoint was not able to be approached as the minimum limiting is active. 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. 4: The speed setpoint was not able to be approached as the maximum limiting is active. 5: It is not possible to increase the speed by 10% as the minimum limiting is active. 6: It is not possible to increase the speed by 10% as the suppression (skip) bandwidth is active. 7: It is not possible to increase the speed by 10% as the maximum limiting is active. 8: The torque difference after the speed setpoint step is too low in order to be able to still reliably identify the moment of inertia. 9: Too few data to be able to reliably identify the moment of inertia. 10: After the setpoint step, the speed either changed too little or in the incorrect direction. 11: The identified moment of inertia is not plausible.

Remedy:

Re fault value = 1:

- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

Re fault value = 2, 5:

- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).

Re fault value = 3, 6:

- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

Re fault value = 4, 7:

- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).

Re fault value = 8:

- the total drive moment of inertia is far higher than that of the motor (refer to p0341, p0342). Deselect rotating measurement (p1960), enter the moment of inertia p0342, recalculate the speed controller p0340 = 4 and repeat the measurement.

Re fault value = 9:

- check the moment of inertia (p0341, p0342). After the change, recalculate (p0340 = 3 or 4).

Re fault value = 10:

- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.

Note:

The moment of inertia identification routine can be disabled using p1959.2.

F07985 Drive: Speed controller optimization (oscillation test)

Message value: %1

Drive object: VECTOR

Reaction: OFF1 (NONE, OFF2)

Acknowledge: IMMEDIATELY

Cause:

A fault has occurred during the vibration test.

Fault value (r0949, interpret decimal):

- 1: The speed did not reach a steady-state condition.
- 2: The speed setpoint was not able to be approached as the minimum limiting is active.
- 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active.
- 4: The speed setpoint was not able to be approached as the maximum limiting is active.
- 5: Torque limits too low for a torque step.
- 6: No suitable speed controller setting was found.

Remedy:

Re fault value = 1:

- check the motor parameters (rating plate data). After the change: Calculate p0340 = 3.
- check the moment of inertia (p0341, p0342). After the change: Calculate p0340 = 3.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

Re fault value = 2:

- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).

Re fault value = 3:

- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

Re fault value = 4:

- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).

Re fault value = 5:

- increase the torque limits (e.g. p1520, p1521).

Re fault value = 6:

- reduce the dynamic factor (p1967).
- disable the vibration test (p1959.4 = 0) and repeat the rotating measurement.

Message value:	%1
Drive object:	VECTOR
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	During the rotating measurements, problems with the ramp-function generator occurred. Fault value (r0949, interpret decimal): 1: The positive and negative directions are inhibited.
Remedy:	Re fault value = 1: Enable the direction (p1110 or p1111).
A07987	Drive: Rotating measurement, no encoder available
Message value:	%1
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	No encoder available. The rotating measurement was carried out without encoder.
Remedy:	Connect encoder or select p1960 = 1, 3.
F07988	Drive: Rotating measurement, no configuration selected
Message value:	-
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	When configuring the rotating measurement (p1959), no function was selected.
Remedy:	Select at least one function for automatic optimization of the speed controller (p1959). See also: p1959
F07989	Drive: Rotating measurement leakage inductance (q-axis)
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF1 (NONE, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	An error has occurred while measuring the dynamic leakage inductance. Fault value (r0949, interpret decimal): 1: The speed did not reach a steady-state condition. 2: The speed setpoint was not able to be approached as the minimum limiting is active. 3: The speed setpoint was not able to be approached as the suppression (skip) bandwidth is active. 4: The speed setpoint was not able to be approached as the maximum limiting is active. 5: The 100% flux setpoint was not reached. 6: No Lq measurement possible because field weakening is active. 7: Speed actual value exceeds the maximum speed p1082 or 75% of the rated motor speed. 8: Speed actual value is below 2 % of the rated motor speed.

Remedy:

Re fault value = 1:

- check the motor parameters.
- carry out a motor data identification routine (p1910).
- if required, reduce the dynamic factor (p1967 < 25 %).

Re fault value = 2:

- adapt the speed setpoint (p1965) or adapt the minimum limit (p1080).

Re fault value = 3:

- adapt the speed setpoint (p1965) or suppression (skip) bandwidths (p1091 ... p1094, p1101).

Re fault value = 4:

- adapt the speed setpoint (p1965) or maximum limit (p1082, p1083 and p1086).

Re fault value = 5:

- flux setpoint p1570 = 100 % and current setpoint p1610 = 0 % kept during the Lq measurement.

Re fault value = 6:

- reduce the regenerative load so that the drive does not reach field weakening when accelerating.
- reduce p1965 so that the q leakage inductance is recorded at lower speeds.

Re fault value = 7:

- increase p1082 if this is technically permissible.
- reduce p1965 so that the q leakage inductance is recorded at lower speeds.

Re fault value = 8:

- reduce the load when motoring so that the drive is not braked.
- increase p1965 so that the measurement may be taken at higher speeds.

Note:

The measurement of the q leakage inductance can be disabled using p1959.5. If only p1959.5 is set, then only this measurement is carried out if p1960 is set to 1, 2 and the drive is powered up.

F07990 Drive: Incorrect motor data identification

Message value: %1

Drive object: SERVO

Reaction: OFF2 (NONE, OFF1)

Acknowledge: IMMEDIATELY

Cause: A fault has occurred during the identification routine.

Fault value (r0949, interpret decimal):

- 1: Current limit value reached.
- 2: Identified stator resistance lies outside the expected range 0.1 ... 100% of Zn.
- 3: Identified rotor resistance lies outside the expected range 0.1 ... 100% of Zn.
- 4: Identified stator reactance lies outside the expected range 50 ... 500% of Zn.
- 5: Identified magnetizing reactance lies outside the expected range 50 ... 500% of Zn.
- 6: Identified rotor time constant lies outside the expected range 10 ms ... 5 s.
- 7: Identified total leakage reactance lies outside the expected range 4 ... 50% of Zn.
- 8: Identified stator leakage reactance lies outside the expected range 2 ... 50% of Zn.
- 9: Identified rotor leakage reactance lies outside the expected range 2 ... 50% of Zn.
- 10: Data set changeover during motor data identification.
- 11: Motor shaft rotates.
- 20: Identified threshold voltage of the semiconductor devices lies outside the expected range 0 ... 10 V.
- 30: Current controller in voltage limiting.
- 40: At least one identification contains errors. The identified parameters are not saved to prevent inconsistencies.
- 50: With the selected current controller sampling rate, the pulse frequency cannot be implemented.

Note:

Percentage values are referred to the rated motor impedance:

$$Z_n = V_{mot,nom} / \sqrt{3} / I_{mot,nom}$$

- 101: Voltage amplitude even at 30% maximum current amplitude is too low to measure the inductance.
- 102, 104: Voltage limiting while measuring the inductance.
- 103: Maximum frequency exceeded during the rotating inductance measurement.
- 110: Motor not finely synchronized before the rotating measurement.
- 111: The zero mark is not received within 2 revolutions.
- 112: Fine synchronization is not realized within 8 seconds after the zero mark has been passed.
- 113: The power, torque or current limit is zero.
- 115: V/f control is active.
- 120: Error when evaluating the magnetizing inductance.
- 125: Cable resistance greater than the total resistance.
- 126: Series inductance greater than the total leakage inductance.

- 127: Identified leakage inductance negative.
- 128: Identified stator resistance negative.
- 129: Identified rotor resistance negative.
- 130: Drive data set changeover during the motor data identification routine.
- 140: The setpoint channel inhibits both directions.
- 160: Accelerating when determining kT, moment of inertia or reluctance torque too short or the accelerating time is too long.
- 173: Internal problem.
- 180: Identification speed (maximum speed, rated speed, $0.9 \cdot p0348$) less than p1755.
- 190: Speed setpoint not equal to zero.
- 191: An actual speed of zero is not reached.
- 192: Speed setpoint not reached.
- 193: Inadmissible motion of the motor when identifying the voltage emulation error.
- 194: Supplementary torque (r1515) not equal to zero.
- 195: Closed-loop torque control active.
- 200, 201: Not possible to identify the voltage emulation error characteristic of the drive converter (p1952, p1953).

Remedy:

- Re fault value = 0:
 - check whether the motor is correctly connected. Observe configuration (star-delta).
- Re fault value = 1 ... 40:
 - check whether motor data have been correctly entered in p0300, p0304 ... p0311.
 - is there an appropriate relationship between the motor power rating and that of the Motor Module? The ratio of the Motor Module to the rated motor current should not be less than 0.5 and not be greater than 4.
 - check configuration (star-delta).
- Re fault value = 2:
 - for parallel circuits, check the motor winding system in p7003. If, for power units connected in parallel, a motor is specified with a single-winding system (p7003 = 0), although a multi-winding system is being used, then a large proportion of the stator resistance is interpreted as feeder cable resistance and entered in p0352.
- Re fault value = 4, 7:
 - check whether inductances are correctly entered in p0233 and p0353.
 - check whether motor has been correctly connected (star-delta).
- Re fault value = 50:
 - reduce the current controller sampling rate.
- Re fault value = 101:
 - increase current limit (p0640) or torque limit (p1520, p1521).
 - check current controller gain (p1715).
 - reduce current controller sampling time (p0115).
- It may be impossible to completely identify the L characteristic, as required current amplitude is too high.
 - suppress meas. (p1909, p1959).
- Re fault value = 102, 104:
 - reduce current limit (p0640).
 - check current controller P gain.
 - suppress meas. (p1909, p1959).
- Re fault value = 103:
 - increase external moment of inertia (if possible).
 - reduce current controller sampling time (p0115).
 - suppress meas. (p1909, p1959).
- Re fault value = 110:
 - before rotating measurement, traverse motor over zero mark.
- Re fault value = 111:
 - it is possible that encoder does not have zero mark. Correct setting in p0404.15.
 - encoder pulse number was incorrectly entered. Correct setting in p0408.
 - if zero mark signal is defective, replace encoder.
- Re fault value = 112:
 - upgrade encoder software.
- Re fault value = 113:
 - check the limits (p0640, p1520, p1521, p1530, p1531), correct the zero values.
- Re fault value = 115:
 - deselect V/f control (p1317 = 0).
- Re fault value = 120:
 - check current controller P gain (p1715) and if required, reduce.
 - increase the pulse frequency (p1800).
- Re fault value = 125:
 - reduce cable resistance (p0352).

Re fault value = 126:

- reduce series inductance (p0353).

Re fault = 127, 128, 129:

- it is possible that current controller is oscillating. Reduce p1715 before next measurement.

Re fault value = 130:

- do not initiate a drive data set changeover during motor ident. routine.

Re fault value = 140:

- before the measurement, enable at least one direction (p1110 = 0 or p1111 = 0 or p1959.14 = 1 or p1959.15 = 1).

Re fault value = 160:

- extend accelerating time when determining kT, moment of inertia and reluctance torque, e.g. by increasing max. speed (p1082), increasing moment of inertia or reducing max. current (p0640).
- in encoderless operation with load moment of inertia, parameterize the load moment of inertia (p1498).
- reduce the ramp-up time (p1958).
- increase speed controller P-gain (p1460).
- suppress meas. (p1959).

Re fault value = 173:

-

Re fault value = 180:

- increase max. speed (p1082).
- reduce p1755.
- suppress meas. (p1909, p1959).

Re fault value = 190:

- set speed setpoint to zero.

Re fault value = 191:

- do not start motor data ident. routine while motor is still rotating.

Re fault value = 192:

- check closed-loop speed control (motor rotor may be locked or closed-loop speed control is not functioning).
- for p1215 = 1, 3 (brake the same as the sequence control) check the control sense (p0410.0).
- ensure that enable signals are present during measurement.
- remove any pulling loads from motor.
- increase max. current (p0640).
- reduce max. speed (p1082).
- suppress meas. (p1959).

Re fault value = 193:

- the motor has moved through more than 5 ° electrical (r0093). Lock motor rotor at one of these pole position angles (r0093): 90 °, 210 ° or 330 ° (+/-5 °) and then start identification.

Re fault value = 194:

- switch out all supplementary torques (e.g. CI: p1511).
- for hanging/suspended axes: Lock motor rotor at one of these pole position angles (r0093): 90 °, 210 ° or 330 ° (+/- 1 °) and then start identification.

Re fault value = 195:

- deselect closed-loop torque control (p1300 = 21 or 20, or set the signal source in p1501 to a 0 signal).

Re fault value = 200, 201:

- set pulse frequency to 0.5 * current controller frequency (e.g. 4 kHz for a current controller clock cycle of 125 us).
- reduce cable length between Motor Module and motor.
- read-out measured values (r1950, r1951) and therefore determine suitable values for p1952, p1953 according to your own estimation.

F07990	Drive: Incorrect motor data identification
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY
Cause:	A fault has occurred during the identification routine. Fault value (r0949, interpret decimal): 1: Current limit value reached. 2: Identified stator resistance lies outside the expected range 0.1 ... 100% of Zn. 3: Identified rotor resistance lies outside the expected range 0.1 ... 100% of Zn. Separately excited synchronous motors: damping resistance outside 1.0 ... 15 % of Zn. 4: Identified stator reactance lies outside the expected range 50 ... 900 % of Zn. Separately excited synchronous motors: stator reactance outside 20 ... 500 % of Zn. 5: Identified magnetizing reactance lies outside the expected range 50 ... 900 % of Zn. Separately excited synchronous motors: magnetizing reactance outside 20 ... 500 % of Zn. 6: Identified rotor time constant lies outside the expected range 10 ms ... 5 s. Separately excited synchronous motors: damping time constant outside 5 ms ... 1 s. 7: Identified total leakage reactance lies outside the expected range 4 ... 100 % of Zn. 8: Identified stator leakage reactance lies outside the expected range 2 ... 50% of Zn. Separately excited synchronous motors: stator leakage reactance outside 2 ... 40 % of Zn. 9: Identified rotor leakage reactance lies outside the expected range 2 ... 50% of Zn. Separately excited synchronous motors: damping leakage reactance outside 1.5 ... 20 % of Zn. 10: Motor has been incorrectly connected. 11: Motor shaft rotates. 20: Identified threshold voltage of the semiconductor devices lies outside the expected range 0 ... 10 V. 30: Current controller in voltage limiting. 40: At least one identification contains errors. The identified parameters are not saved to prevent inconsistencies. Note: Percentage values are referred to the rated motor impedance: $Z_n = V_{mot,nom} / \sqrt{3} / I_{mot,nom}$
Remedy:	Re fault value = 0: - check whether the motor is correctly connected. Observe configuration (star-delta). Re fault value = 1 ... 40: - check whether motor data have been correctly entered in p0300, p0304 ... p0311. - is there an appropriate relationship between the motor power rating and that of the Motor Module? The ratio of the Motor Module to the rated motor current should not be less than 0.5 and not be greater than 4. - check configuration (star-delta). Also for fault value = 11: - deactivate vibration monitoring (p1909 bit 7 = 1). Re fault value = 2: - for parallel circuits, check the motor winding system in p7003. If, for power units connected in parallel, a motor is specified with a single-winding system (p7003 = 0), although a multi-winding system is being used, then a large proportion of the stator resistance is interpreted as feeder cable resistance and entered in p0352. Re fault value = 4, 7: - check whether inductances are correctly entered in p0233 and p0353. - check whether motor has been correctly connected (star-delta).
A07991 (N)	Drive: Motor data identification activated
Message value:	-
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The motor data ident. routine is activated. The motor data identification routine is carried out at the next power-on command. See also: p1910, p1960

Remedy: None necessary.
The alarm automatically disappears after the motor data identification routine has been successfully completed or for the setting p1910 = 0 or p1960 = 0.
If a POWER ON or a warm restart is performed with motor data identification selected, the motor data identification request will be lost. If motor data identification is required, it will need to be selected again manually following ramp-up.

Reaction upon N: NONE
Acknowl. upon N: NONE

A07991 (N) Drive: Motor data identification activated

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The motor data ident. routine is activated.
The motor data identification routine is carried out at the next power-on command.
If rotating measurement is selected (see p1900, p1960), it will not be possible to save the parameter assignment. Once motor data identification has been completed or deactivated, the option to save the parameter assignment will be made available again.
See also: p1910

Remedy: None necessary.
The alarm automatically disappears after the motor data identification routine has been successfully completed or for the setting p1900 = 0.

Reaction upon N: NONE
Acknowl. upon N: NONE

F07993 Drive: Incorrect direction of rotation of the field or encoder actual value inversion

Message value: -
Drive object: SERVO
Reaction: OFF2 (NONE)
Acknowledge: IMMEDIATELY
Cause: Either the direction of the rotating field or the encoder actual value has an incorrect sign. The motor data identification automatically changed the actual value inversion (p0410) in order to correct the control sense. This can result in a direction of rotation change. To acknowledge this fault, the correctness of the direction of rotation must first be acknowledged with p1910 = -2.

Remedy: Check the direction of rotation, also for the position controller, if one is being used.
If the direction of rotation is correct, the following applies:
No additional measures are required (except p1910 = -2 and acknowledge fault).
If the direction of rotation is incorrect, the following applies:
To change the direction of rotation, two phases must be interchanged and the motor identification routine must be repeated.

A07994 (N) Drive: motor data identification not performed

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Motor data identification has not yet been performed with the actual data set.
The alarm is only triggered if the selection of the data set changes (see r0051) and vector control is parameterized (p1300 >= 20) in the new data set selected and motor data identification has not yet been performed (see r3925).

Remedy: - Perform motor data identification (see p1900).
- Return data set.
- Parameterize V/f control (p1300 < 20).

Reaction upon N: NONE
Acknowl. upon N: NONE

F07995	Drive: Pole position identification not successful
Message value:	%1
Drive object:	SERVO
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The pole position identification routine was unsuccessful. Fault value (r0949, interpret decimal): 1: No current is established. 2: The starting current is not zero. 3: The selected max. distance was exceeded (p1981). 4x: The measuring signal does not permit a clear evaluation. 5: The max. current was exceeded during the measurement. 6: The current measurement must be re-calibrated. 7x: The Sensor Module does not support the pole position identification routine. 70 ... 79: Only for internal Siemens troubleshooting. 8: The pole position identification routine current required is greater than the max. current. 9: The set pole position identification routine current is zero. 10: Data set changeover during the pole position identification. 11: The encoder adjustment to determine the commutation angle (p1990 = 1) and the encoder without zero mark is not finely synchronized or does not have any valid data. 100: Motion-based pole position identification, 1st and 2nd measurement different. Motor locked or current (p1993) too low. 101: Motion-based position position identification, insufficient motion, motor locked or current (p1993) too low. 102: Motion-based pole position identification, brake is being used and is closed. The motion-based position position identification in conjunction with the brake is not permitted. 103: Motion-based pole position identification without encoder. 104: Motion-based pole position identification, speed actual value not zero after stabilizing time. Note: x = 0 ... 9
Remedy:	Re fault value = 1: Check the motor connection and DC link voltage. For the following parameters, set practical values that are not zero (p0325, p0329). Re fault value = 3: Increase the max. distance (p1981). Reduce the currents for the pole position identification routine (p0325, p0329). Stop the motor in order to carry out the pole position identification routine. Re fault value = 40 ... 49: Increase the currents for the pole position identification routine (p0325, p0329). Stop the motor in order to carry out the pole position identification routine. Select another technique for pole position identification routine (p1980). Use another motor, absolute encoder or Hall sensors. Re fault value = 5: Reduce the currents for the pole position identification routine (p0325, p0329). Re fault value = 6: Re-calibrate the Motor Module. Re fault value = 7x: Upgrade the software in the Sensor Module. Re fault value = 8: Reduce the currents for the pole position identification routine (p0329, p0325, p1993). The power unit cannot provide the necessary pole position identification routine current (p0209 < p0329, p0325, p1993), replace the power unit by a power unit with a higher max. current. Re fault value = 9: Enter a value not equal to zero in the pole position identification routine current (p0329, p0325, p1993). Re fault value = 10: Do not initiate a data set changeover during the pole position identification. Re fault value = 11: - for incremental encoders without commutation with zero mark (p0404.15 = 0), it does not make sense to adjust the encoder to determine the commutation angle (p1990 = 1). In this case, the function should be deselected (p1990 = 0) or, for an encoder with suitable zero mark, commutation with zero mark should be selected (p0404.15 = 1). - for absolute encoders, only adjust the encoder to determine the commutation angle (p1990 = 1) if the encoder supplies commutation information and is finely synchronized (p1992.8 = 1 and p1992.10 = 1). The encoder is possibly parked, deactivated (p0145), not ready to operate or signals a fault condition. - deselect the encoder adjustment to determine the commutation angle (set p1990 to 0).

Re fault value = 100, 101:
Check and ensure that the motor is free to move.
Increase the current for motion-based pole position identification (p1993).
Re fault value = 102:
If the motor is to be operated with a brake: Select a different technique to identify the pole position (p1980).
If the motor can be operated without a brake: Open the brake (p1215 = 2).
Re fault value = 103:
The motion-based pole position identification can only be carried out using an encoder. Connect an encoder or select another technique for pole position identification routine (p1980).
Re fault value = 104:
Pole position identification, increase the smoothing time, motion-based (p1997).
Pole position identification, increase the rise time, motion-based (p1994).
Pole position identification, check the gain, motion-based (p1995).
Pole position identification, check the integral time, motion-based (p1996).
For motor encoders with track A/B sq-wave (p0404.3 = 1) and flank time measurement (p0430.20 = 0), the integral time must be disabled (p1996 = 0).

F07996	Drive: Pole position identification routine not carried out
Message value:	-
Drive object:	SERVO
Reaction:	ENCODER (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	In operation, the operating mode that requires a pole position identification was changed over, which is not possible in this state: - the drive was changed over, flying, from encoderless operation to operation with encoder without having previously carried out a pole position identification for the encoder. p1404 is then at a value between zero and the max. speed and the pulses in the speed range above p1404 were enabled without a pole position ident. routine having been previously carried out in operation with encoder. - in operation, an EDS changeover was made to an encoder where it is necessary to carry out a pole position identification. However, this has still not been carried out (p1982 = 1 or 2 and p1992.7 = 0).
Remedy:	- for a flying changeover between operation with and without encoder with pole position identification after POWER ON or commissioning (p0010 not equal to zero) enable the pulses once at zero speed. This means that the pole position identification routine is carried out and the result is available for operation. - carry out the EDS changeover with the pulses inhibited, or, before the changeover, carry out a pole position identification using this data set.
A07998	Drive: Motor data identification active on another drive
Message value:	%1
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The motor data identification is activated on the drive object specified in the fault value and interlocks the other drive objects so they cannot be powered up. Fault value (r0949, interpret decimal): Drive object with the active motor data identification. See also: p1910, p1960
Remedy:	- wait for the complete execution of the motor data identification of the drive object designated in the fault value. - deselect the motor data identification for the drive object designated in the fault value (p1910 = 0 or p1960 = 0).
A07999	Drive: Motor data identification cannot be activated
Message value:	%1
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	Closed-loop control is enabled on a SERVO drive object type. To select motor data identification, pulses must be suppressed for all SERVO drive objects. Fault value (r0949, interpret decimal): Drive object with enabled closed-loop control.
Remedy:	Withdraw the pulse enable on all drives and reactivate the motor data identification.

F08000 (N, A) TB: +/-15 V power supply faulted

Message value: %1
Drive object: All objects

Cause:	The CANopen object is not provided for the Process Data Object (PDO) Mapping.
Remedy:	Use a CANopen object intended for the PDO mapping or enter 0. The following objects can be mapped in the Receive Process Data Object (RPDO) or Transmit Process Data Object (TPDO): - RPDO: 6040 hex, 6060 hex, 60FF hex, 6071 hex; 5800 hex - 580F hex; 5820 hex - 5827 hex - TPDO: 6041 hex, 6061 hex, 6063 hex, 6069 hex, 606B hex, 606C hex, 6074 hex; 5810 hex - 581F hex; 5830 hex - 5837 hex Only sub-index 0 of the specified objects can be mapped. Note: As long as A08755 is present, the COB-ID cannot be set to valid.

A08756	CAN: Number of mapped bytes exceeded
Message value:	-
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The number of bytes of the mapped objects exceeds the telegram size for net data. A max. of 8 bytes is permissible.
Remedy:	Map fewer objects or objects with a smaller data type. See also: p8710, p8711, p8712, p8713, p8714, p8715, p8716, p8717, p8730, p8731, p8732, p8733, p8734, p8735, p8736, p8737
A08757	CAN: Set COB-ID invalid
Message value:	-
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	For online operation, the appropriate COB-ID must be set invalid before mapping. Example: Mapping for RPDO 1 should be changed (p8710[0]). --> set p8700[0] = C00006E0 hex (invalid COB-ID) --> set p8710[0] as required. --> p8700[0] enter a valid COB-ID
Remedy:	Set the COB-ID to invalid.
A08758	CAN: Number of PDO channels too low
Message value:	-
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The number of PDO channels in p8740 has either been set to 0 or too low. See also: p8740 (CAN channel distribution)
Remedy:	The number of channels set in p8740 must be greater than or equal to the number of PDOs. There are 2 possibilities: Increase the number of channels in p8740 and confirm the selection using p8741. Reduce the number of PDOs by setting the COB-ID to invalid. See also: p8740 (CAN channel distribution), p8741 (CAN PDO configuration acknowledgement)
A08759	CAN: PDO COB-ID already available
Message value:	-
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	An existing PDO COB-ID was allocated.
Remedy:	Select another PDO COB-ID.

A13000	License not adequate
Message value:	%1
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	- for the drive unit, the options that require a license are being used but the licenses are not sufficient. - an error occurred when checking the existing licenses. Alarm value (r2124, interpret decimal): 0: The existing license is not sufficient. 1: An adequate license was not able to be determined as the memory card with the required licensing data was withdrawn in operation. 2: An adequate license was not able to be determined, as an error occurred when reading-out the required licensing data from the memory card. 3: An adequate license was not able to be determined as there is a checksum error in the license key. 4: An internal error occurred when checking the license.
Remedy:	Re alarm value = 0: Additional licenses are required and these must be activated (p9920, p9921). Re alarm value = 1: With the system powered down, re-insert the memory card that matches the system. Re alarm value = 2: Enter and activate the license key (p9920, p9921). Re alarm value = 3: Compare the license key (p9920) entered with the license key on the certificate of license. Re-enter the license key and activate (p9920, p9921). Re alarm value = 4: - carry out a POWER ON. - upgrade firmware to later version. - contact the Hotline.

A13001	Error in license checksum
Message value:	-
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	When checking the checksum of the license key, an error was detected.
Remedy:	Compare the license key (p9920) entered with the license key on the certificate of license. Re-enter the license key and activate (p9920, p9921).

F13009	Licensing OA application not licensed
Message value:	%1
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1
Acknowledge:	IMMEDIATELY
Cause:	At least one OA application which is under license does not have a license. Code for unlicensed OA applications corresponds to p4956 or p4955.
Remedy:	- Enter and activate the license key which licenses OA applications under license (p9920, p9921). - Deactivate unlicensed OA applications (p4956).

F13010	Licensing function module not licensed
Message value:	%1
Drive object:	A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1
Acknowledge:	IMMEDIATELY
Cause:	At least one function module which is under license does not have a license. Fault value (r0949, interpret hexadecimal): Unlicensed function modules are coded bit by bit. The code corresponds to that used in r0108.
Remedy:	- Deactivate unlicensed function modules (p108). - Enter and activate the license key which licenses function modules under license (p9920, p9921).
F30001	Power unit: Overcurrent
Message value:	Fault cause: %1 bin
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit has detected an overcurrent condition. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame). - V/f operation: Up ramp set too low. - V/f operation: Rated motor current is significantly greater than that of the Motor Module. - infeed: High discharge and post-charging current for voltage dip. - infeed: High post-charging currents for overload when motoring and DC link voltage dip. - infeed: Short-circuit currents at power-up due to the missing line reactor. - power cables are not correctly connected. - power cables exceed the maximum permissible length. - power unit defective. - line phase interrupted. Additional causes for a parallel switching device (r0108.15 = 1): - a power unit has tripped (powered down) due to a ground fault. - the closed-loop circulating current control is either too slow or has been set too fast. Fault value (r0949, interpret bitwise binary): Bit 0: Phase U. Bit 1: Phase V. Bit 2: Phase W. Bit 3: Overcurrent in the DC link. Note: Fault value = 0 means that the phase with overcurrent is not recognized (e.g. for blocksize device).
Remedy:	- check the motor data - if required, carry out commissioning. - check the motor circuit configuration (star-delta) - V/f operation: Increase up ramp. - V/f operation: Check the assignment of the rated currents of the motor and Motor Module. - infeed: Check the line supply quality. - infeed: Reduce the motor load. - infeed: Correct connection of the line reactor. - check the power cable connections. - check the power cables for short-circuit or ground fault. - check the length of the power cables. - replace power unit. - check the line supply phases. For a parallel switching device (r0108.15 = 1) the following additionally applies: - check the ground fault monitoring thresholds (p0287). - check the setting of the closed-loop circulating current control (p7036, p7037).

F30002 Power unit: DC link voltage, overvoltage

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The power unit has detected overvoltage in the DC link.
- motor regenerates too much energy.
- device connection voltage too high.
- when operating with a Voltage Sensing Module (VSM), the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
- line phase interrupted.
Fault value (r0949, interpret decimal):
DC link voltage [1 bit = 100 mV].
For SINAMICS GM/SM, the following applies:
Fault value (r0949, interpret decimal):
32: Overvoltage in the negative partial DC link (VdcN).
64: Overvoltage in the positive partial DC link (VdcP).
96: Overvoltage in both partial DC links.
Remedy:
- increase the ramp-down time
- activate the DC link voltage controller
- use a brake resistor or Active Line Module
- increase the current limit of the infeed or use a larger module (for the Active Line Module)
- check the device supply voltage
- check and correct the phase assignment at the VSM and at the power unit
- check the line supply phases.
See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller or Vdc monitoring configuration)

F30002 Power unit: DC link voltage, overvoltage

Message value: %1
Drive object: VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The power unit has detected overvoltage in the DC link.
- motor regenerates too much energy.
- device connection voltage too high.
- when operating with a Voltage Sensing Module (VSM), the phase assignment L1, L2, L3 at the VSM differs from the phase assignment at the power unit.
- line phase interrupted.
Fault value (r0949, interpret decimal):
DC link voltage [1 bit = 100 mV].
For SINAMICS GM/SM, the following applies:
Fault value (r0949, interpret decimal):
32: Overvoltage in the negative partial DC link (VdcN).
64: Overvoltage in the positive partial DC link (VdcP).
96: Overvoltage in both partial DC links.
Remedy:
- increase the ramp-down time
- activate the DC link voltage controller
- use a brake resistor or Active Line Module
- increase the current limit of the infeed or use a larger module (for the Active Line Module)
- check the device supply voltage
- check and correct the phase assignment at the VSM and at the power unit
- check the line supply phases.
- set the rounding times (p1130, p1136). This is particularly recommended in V/f operation to relieve the DC link voltage controller with rapid ramp-down times of the ramp-function generator.
See also: p0210 (Drive unit line supply voltage), p1240 (Vdc controller or Vdc monitoring configuration)

F30003 Power unit: DC link voltage, undervoltage

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The power unit has detected an undervoltage condition in the DC link.
- line supply failure
- line supply voltage below the permissible value.
- line supply infeed failed or interrupted.
- line phase interrupted.
Note:
The monitoring threshold for the DC link undervoltage is the minimum of the following values:
- for a calculation, refer to p0210.

Remedy:
- check the line supply voltage
- check the line supply infeed and observe the fault messages relating to it (if there are any)
- check the line supply phases.
Note:
The ready signal for the infeed (r0863) must be connected to the associated drive inputs (p0864).
See also: p0210 (Drive unit line supply voltage)

F30004 Power unit: Overtemperature heat sink AC inverter

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The temperature of the power unit heat sink has exceeded the permissible limit value.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
Fault value (r0949):
Temperature [1 bit = 0.01 °C].

Remedy:
- check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.
Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05000 has been undershot.
See also: p1800 (Pulse frequency setpoint)

F30005 Power unit: Overload I2t

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: The power unit was overloaded (r0036 = 100 %).
- the permissible rated power unit current was exceeded for an inadmissibly long time.
- the permissible load duty cycle was not maintained.
Fault value (r0949, interpret decimal):
I2t [100 % = 16384].

Remedy:
- reduce the continuous load.
- adapt the load duty cycle.
- check the motor and power unit rated currents.
See also: r0036 (Power unit overload I2t), r0206 (Rated power unit power), p0307 (Rated motor power)

F30005	Power unit: Overload I2t
Message value:	%1
Drive object:	VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit was overloaded (r0036 = 100 %). - the permissible rated power unit current was exceeded for an inadmissibly long time. - the permissible load duty cycle was not maintained. Fault value (r0949, interpret decimal): I2t [100 % = 16384].
Remedy:	- reduce the continuous load. - adapt the load duty cycle. - check the motor and power unit rated currents. - increase p0294 See also: r0036 (Power unit overload I2t), r0206 (Rated power unit power), p0307 (Rated motor power)

F30006	Power unit: Thyristor Control Board
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The Thyristor Control Board (TCB) of the Basic Line Module signals a fault. - there is no line supply voltage. - the line contactor is not closed. - the line supply voltage is too low. - line supply frequency outside the permissible range (45 ... 66 Hz). - there is a DC link short-circuit. - there is a DC link short-circuit (during the pre-charging phase). - voltage supply for the Thyristor Control Board outside the nominal range (5 ... 18 V) and line voltage >30 V. - there is an internal fault in the Thyristor Control Board.
Remedy:	The faults must be saved in the Thyristor Control Board and must be acknowledged. To do this, the supply voltage of the Thyristor Control Board must be switched out for at least 10 s! - check the line supply voltage - check or energize the line contactor. - check the monitoring time and, if required, increase (p0857). - if required, observe additional power unit messages/signals. - check the DC link regarding short-circuit or ground fault. - evaluate diagnostic LEDs for the Thyristor Control Board.

F30008	Power unit: Sign-of-life error cyclic data
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	Infeed: NONE (OFF1, OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The power unit has detected that the cyclic setpoint telegrams of the Control Unit have not been updated on time. The number of consecutive sign-of-life errors has exceeded the fault threshold (p7789).
Remedy:	- check the electrical cabinet design and cable routing for EMC compliance - for projects with the VECTOR drive object, check whether p0117 = 6 has been set on the Control Unit. - increase the fault threshold (p7789). See also: p0117 (Current controller computing dead time mode)

A30010 (F)	Power unit: Sign-of-life error cyclic data
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	A DRIVE-CLiQ communication error has occurred between the Control Unit and the power unit involved. The cyclic setpoint telegrams of the Control Unit were not received on time by the power unit for at least one clock cycle.
Remedy:	- check the electrical cabinet design and cable routing for EMC compliance
Reaction upon F:	Infeed: NONE (OFF1, OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
F30011	Power unit: Line phase failure in main circuit
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2 (OFF1)
Acknowledge:	IMMEDIATELY
Cause:	A line phase failure was detected at the power unit. - the fuse of a phase of a main circuit has ruptured. - the DC link voltage ripple has exceeded the permissible limit value. Note: The cause may also be a phase failure in the motor feeder cable.
Remedy:	- check the main circuit fuses. - check the motor feeder cables.
F30012	Power unit: Temperature sensor heat sink wire breakage
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	The connection to one of the heat sink temperature sensors in the power unit is interrupted. Fault value (r0949, interpret hexadecimal): Bit 0: Module slot (electronics slot) Bit 1: Air intake Bit 2: Inverter 1 Bit 3: Inverter 2 Bit 4: Inverter 3 Bit 5: Inverter 4 Bit 6: Inverter 5 Bit 7: Inverter 6 Bit 8: Rectifier 1 Bit 9: Rectifier 2
Remedy:	Contact the manufacturer.

F30013	Power unit: Temperature sensor heat sink short-circuit
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	The heat sink temperature sensor in the power unit is short-circuited. Fault value (r0949, interpret hexadecimal): Bit 0: Module slot (electronics slot) Bit 1: Air intake Bit 2: Inverter 1 Bit 3: Inverter 2 Bit 4: Inverter 3 Bit 5: Inverter 4 Bit 6: Inverter 5 Bit 7: Inverter 6 Bit 8: Rectifier 1 Bit 9: Rectifier 2
Remedy:	Contact the manufacturer.

F30015	Power unit: Phase failure motor feeder cable
Message value:	-
Drive object:	SERVO
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	A phase failure was detected at the power unit output (motor feeder cable). Chassis power units do not feature phase failure monitoring.
Remedy:	Check the motor feeder cables.

F30015	Power unit: Phase failure motor feeder cable
Message value:	-
Drive object:	VECTOR
Reaction:	OFF2 (NONE, OFF1, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	A phase failure was detected at the power unit output (motor feeder cable). Chassis power units do not feature phase failure monitoring. Note: The fault can also be signaled if the drive stalled in V/f control. In this particular case, a phase failure does not necessarily have to be present, but a current of 0 was measured in one phase due to current dissymmetry.
Remedy:	1. Check the motor feeder cables. 2. If the drive has stalled in V/f control, the acceleration or deceleration time (p1120) should be increased.

A30016 (N)	Power unit: Load supply switched out
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The DC link voltage is too low. Alarm value (r2124, interpret decimal): DC link voltage in [V].
Remedy:	- switch on load supply. - check the line supply if necessary.
Reaction upon N:	NONE
Acknowled. upon N:	NONE

F30017	Power unit: Hardware current limit has responded too often
Message value:	Fault cause: %1 bin
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The hardware current limitation in the relevant phase (see A30031, A30032, A30033) has responded too often. The number of times the limit has been exceeded depends on the design and type of power unit. For infeed units, the following applies: - closed-loop control is incorrectly parameterized. - load on the infeed is too high. - Voltage Sensing Module incorrectly connected. - line reactor missing or the incorrect type. - power unit defective. The following applies to Motor Modules: - closed-loop control is incorrectly parameterized. - fault in the motor or in the power cables. - the power cables exceed the maximum permissible length. - motor load too high - power unit defective. Fault value (r0949, interpret binary): Bit 0: Phase U Bit 1: Phase V Bit 2: Phase W
Remedy:	For infeed units, the following applies: - check the controller settings and reset and identify the controller if necessary (p0340 = 2, p3410 = 5) - reduce the load and increase the DC-link capacitance or use a higher-rating infeed if necessary - check the connection of the optional Voltage Sensing Module - check the connection and technical data of the line reactor - check the power cables for short-circuit or ground fault. - replace power unit. The following applies to Motor Modules: - check the motor data. - check the motor circuit configuration (star-delta). - check the motor load. - check the power cable connections. - check the power cables for short-circuit or ground fault. - check the length of the power cables. - replace power unit.
F30020	Power unit: Configuration not supported
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A configuration is requested that is not supported by the power unit. Fault value (r0949, interpret hexadecimal): 0: Autonomous operation is requested but is not supported.
Remedy:	Re fault value = 0: If internal voltage protection is active (p1231 = 3), deactivate it if necessary. See also: p1231 (Armature short-circuit / DC brake configuration)

F30021 Power unit: Ground fault

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Power unit has detected a ground fault.
- ground fault in the power cables.
- winding fault or ground fault at the motor.
- CT defective.
Additional cause for CU310/CUA31:
- when the brake is applied, this causes the hardware DC current monitoring to respond.
Additional cause for parallel switching devices (r0108.15 = 1):
- the closed-loop circulating current control is either too slow or has been set too fast.
Fault value (r0949, interpret decimal):
Absolute value, total current amplitude [20479 = r0209 * 1.4142].
Remedy: - check the power cable connections.
- check the motor.
- check the CT.
The following applies additionally for CU310/CUA31:
- check the cables and contacts of the brake connection (a wire is possibly broken).
For parallel switching devices (r0108.15 = 1) the following additionally applies:
- check the ground fault monitoring thresholds (p0287).
- check the setting of the closed-loop circulating current control (p7036, p7037).
See also: p0287 (Ground fault monitoring thresholds)

F30022 Power unit: Monitoring V_{ce}

Message value: Fault cause: %1 bin
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: POWER ON
Cause: In the power unit, the monitoring of the collector-emitter voltage (V_{ce}) of the semiconductor has responded.
Possible causes:
- fiber-optic cable interrupted.
- power supply of the IGBT gating module missing.
- short-circuit at the power unit output.
- defective semiconductor in the power unit.
Fault value (r0949, interpret binary):
Bit 0: Short-circuit in phase U
Bit 1: Short circuit in phase V
Bit 2: Short-circuit in phase W
Bit 3: Light transmitter enable defective
Bit 4: V_{ce} group fault signal interrupted
See also: r0949 (Fault value)
Remedy: - check the fiber-optic cable and if required, replace.
- check the power supply of the IGBT gating module (24 V).
- check the power cable connections.
- select the defective semiconductor and replace.

A30023	Power unit: Overtemperature thermal model alarm
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The temperature difference between the heat sink and chip has exceeded the permissible limit value. - the permissible load duty cycle was not maintained. - insufficient cooling, fan failure. - overload. - ambient temperature too high. - pulse frequency too high. See also: r0037
Remedy:	- adapt the load duty cycle. - check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range. - check the motor load. - reduce the pulse frequency if this is higher than the rated pulse frequency.

A30023	Power unit: Overtemperature thermal model alarm
Message value:	-
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The temperature difference between the heat sink and chip has exceeded the permissible limit value. - the permissible load duty cycle was not maintained. - insufficient cooling, fan failure. - overload. - ambient temperature too high. - pulse frequency too high. See also: r0037
Remedy:	- adapt the load duty cycle. - check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range. - check the motor load. - reduce the pulse frequency if this is higher than the rated pulse frequency. - if DC brake is active: reduce braking current (see p1232).

F30024	Power unit: Overtemperature thermal model
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The temperature difference between the heat sink and chip has exceeded the permissible limit value. - the permissible load duty cycle was not maintained. - insufficient cooling, fan failure. - overload. - ambient temperature too high. - pulse frequency too high. See also: r0037
Remedy:	- adapt the load duty cycle. - check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range. - check the motor load. - reduce the pulse frequency if this is higher than the rated pulse frequency.

F30024 Power unit: Overtemperature thermal model

Message value: -
Drive object: VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The temperature difference between the heat sink and chip has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
See also: r0037
Remedy: - adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.
- if DC brake is active: reduce braking current (see p1232).

F30025 Power unit: Chip overtemperature

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Chip temperature of the semiconductor has exceeded the permissible limit value.
- the permissible load duty cycle was not maintained.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- pulse frequency too high.
Fault value (r0949):
Temperature difference between the heat sink and chip [1 Bit = 0.01 °C].
Remedy: - adapt the load duty cycle.
- check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- reduce the pulse frequency if this is higher than the rated pulse frequency.
Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05001 has been undershot.
See also: r0037

F30027	Power unit: Precharging DC link time monitoring
Message value:	Enable signals: %1, Status: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit DC link was not able to be pre-charged within the expected time. 1) There is no line supply voltage connected. 2) The line contactor/line side switch has not been closed. 3) The line supply voltage is too low. 4) Line supply voltage incorrectly set (p0210). 5) The pre-charging resistors are overheated as there were too many pre-charging operations per time unit. 6) The pre-charging resistors are overheated as the DC link capacitance is too high. 7) The pre-charging resistors are overheated because when there is no "ready for operation" (r0863.0) of the infeed unit, power is taken from the DC link. 8) The pre-charging resistors are overheated as the line contactor was closed during the DC link fast discharge through the Braking Module. 9) The DC link has either a ground fault or a short-circuit. 10) The pre-charging circuit is possibly defective (only for chassis units). Fault value (r0949, interpret binary): Missing internal enable signals, power unit (lower 16 bit): (Inverted bit-coded representation FFFF hex -> all internal enable signals available) Bit 0: Power supply of the IGBT gating shut down Bit 1: Reserved Bit 2: Reserved Bit 3: Ground fault detected Bit 4: Peak current intervention Bit 5: I2t exceeded Bit 6: Thermal model overtemperature calculated Bit 7: (heat sink, gating module, power unit) overtemperature measured Bit 8: Reserved Bit 9: Overvoltage detected Bit 10: Power unit has completed pre-charging, ready for pulse enable Bit 11: STO terminal missing Bit 12: Overcurrent detected Bit 13: Armature short-circuit active Bit 14: DRIVE-CLiQ fault active Bit 15: Uce fault detected, transistor de-saturated due to overcurrent/short-circuit Status, power unit (upper 16 bit, hexadecimal number): 0: Fault status (wait for OFF and fault acknowledgement) 1: Restart inhibit (wait for OFF) 2: Overvoltage condition detected -> change into the fault state 3: Undervoltage condition detected -> change into the fault state 4: Wait for bypass contactor to open -> change into the fault state 5: Wait for bypass contactor to open -> change into restart inhibit 6: Commissioning 7: Ready for pre-charging 8: Pre-charging started, DC link voltage lower than the minimum switch-on voltage 9: Pre-charging, DC link voltage end of pre-charging still not detected 10: Wait for the end of the de-bounce time of the main contactor after pre-charging has been completed 11: Pre-charging completed, ready for pulse enable 12: It was detected that the STO terminal was energized at the power unit See also: p0210 (Drive unit line supply voltage)

Remedy:

In general:

- check the line supply voltage at the input terminals.
- check the line supply voltage setting (p0210).
- the following applies to booksize units: Wait (approx. 8 min.) until the pre-charging resistors have cooled down. For this purpose, preferably disconnect the infeed unit from the line supply.

Re 5):

- carefully observe the permissible pre-charging frequency (refer to the appropriate Equipment Manual).

Re 6):

- check the total capacitance of the DC link and reduce in accordance with the maximum permissible DC-link capacitance if necessary (refer to the appropriate Equipment Manual)

Re 7):

- interconnect the ready-for-operation signal from the infeed unit (r0863.0) in the enable logic of the drives connected to this DC link

Re 8):

- check the connections of the external line contactor. The line contactor must be open during DC-link fast discharge.

Re 9):

- check the DC link for ground faults or short circuits.

A30031 Power unit: Hardware current limiting, phase U

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: Hardware current limit for phase U responded. The pulsing in this phase is inhibited for one pulse period.

- closed-loop control is incorrectly parameterized.
- fault in the motor or in the power cables.
- the power cables exceed the maximum permissible length.
- motor load too high
- power unit defective.

Note:
Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.

Remedy:

- check the motor data.
- check the motor circuit configuration (star-delta)
- check the motor load.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.

A30032 Power unit: Hardware current limiting, phase V

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: Hardware current limit for phase V responded. The pulsing in this phase is inhibited for one pulse period.

- closed-loop control is incorrectly parameterized.
- fault in the motor or in the power cables.
- the power cables exceed the maximum permissible length.
- motor load too high
- power unit defective.

Note:
Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.

Remedy:

- check the motor data.
- check the motor circuit configuration (star-delta)
- check the motor load.
- check the power cable connections.
- check the power cables for short-circuit or ground fault.
- check the length of the power cables.

A30033	Power unit: Hardware current limiting, phase W
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Hardware current limit for phase W responded. The pulsing in this phase is inhibited for one pulse period. - closed-loop control is incorrectly parameterized. - fault in the motor or in the power cables. - the power cables exceed the maximum permissible length. - motor load too high - power unit defective. Note: Alarm A30031 is always output if, for a Power Module, the hardware current limiting of phase U, V or W responds.
Remedy:	- check the motor data. - check the motor circuit configuration (star-delta) - check the motor load. - check the power cable connections. - check the power cables for short-circuit or ground fault. - check the length of the power cables.
A30034	Power unit: Internal overtemperature
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The alarm threshold for internal overtemperature has been reached. If the temperature inside the unit continues to increase, fault F30036 may be triggered. - ambient temperature might be too high. - insufficient cooling, fan failure. Fault value (r0949, interpret binary): Bit 0 = 1: Control electronics range. Bit 1 = 1: Power electronics range.
Remedy:	- check the ambient temperature. - check the fan for the inside of the unit.
F30035	Power unit: Air intake overtemperature
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	The air intake in the power unit has exceeded the permissible temperature limit. For air-cooled power units, the temperature limit is at 55 °C. - ambient temperature too high. - insufficient cooling, fan failure. Fault value (r0949, interpret decimal): Temperature [1 bit = 0.01 °C].
Remedy:	- check whether the fan is running. - check the fan elements. - check whether the ambient temperature is in the permissible range. Notice: This fault can only be acknowledged after this alarm threshold for alarm A05002 has been undershot.

F30036 Power unit: Internal overtemperature

Message value: %1
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: For chassis power units, the following applies:
The temperature inside the drive converter has exceeded the permissible temperature limit.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
Fault value (r0949, interpret binary):
Bit 0 = 1: Control electronics range.
Bit 1 = 1: Power electronics range.
Remedy: - check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
Notice:
This fault can only be acknowledged once the permissible temperature limit minus 5 K has been undershot.

F30037 Power unit: Rectifier overtemperature

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The temperature in the rectifier of the power unit has exceeded the permissible temperature limit.
- insufficient cooling, fan failure.
- overload.
- ambient temperature too high.
- line supply phase failure.
Fault value (r0949, interpret decimal):
Temperature [1 bit = 0.01 °C].
Remedy: - check whether the fan is running.
- check the fan elements.
- check whether the ambient temperature is in the permissible range.
- check the motor load.
- check the line supply phases.
Notice:
This fault can only be acknowledged after this alarm threshold for alarm A05004 has been undershot.

A30038 Power unit: Capacitor fan monitoring

Message value: %1
Drive object: B_INF
Reaction: NONE
Acknowledge: NONE
Cause: The capacitor fan signals a fault.
Remedy: Replace the capacitor fan in the power unit.

F30039 Power unit: Failure capacitor fan

Message value: %1
Drive object: B_INF
Reaction: OFF1
Acknowledge: IMMEDIATELY
Cause: The capacitor fan has failed.
Remedy: Replace the capacitor fan in the power unit.

F30040	Power unit: Undervolt 24 V
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	Failure of the 24 V power supply for the power unit. - The undervoltage threshold was undershot for longer than 3 ms. Fault value (r0949, interpret decimal): 24 V voltage [1 bit = 0.1 V].
Remedy:	- check the 24 V DC voltage supply to power unit. - carry out a POWER ON (power off/on) for the component.
A30041 (F)	Power unit: Undervoltage 24 V alarm
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	24 V power supply fault for the power unit. - the 16 V threshold was undershot.. Fault value (r0949, interpret decimal): 24 V voltage [1 bit = 0.1 V].
Remedy:	- check the 24 V DC voltage supply to power unit. - carry out a POWER ON (power off/on) for the component.
Reaction upon F:	Infeed: NONE (OFF1, OFF2) Servo: NONE (OFF1, OFF2, OFF3) Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY (POWER ON)
A30042	Power unit: Fan operating time reached or exceeded
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The maximum operating time of the fan in the power unit is set in p0252. This message indicates the following: Fault value (r0949, interpret decimal): 0: The maximum fan operating time is 500 hours. 1: The maximum fan operating time has been exceeded.
Remedy:	Replace the fan in the power unit and reset the operating hours counter to 0 (p0251 = 0). See also: p0251 (Operating hours counter power unit fan), p0252 (Maximum operating time power unit fan)
F30043	Power unit: Overvolt 24 V
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	The following applies for CU31x: Overvoltage of the 24 V power supply for the power unit. - the 31.5 V threshold was exceeded for more than 3 ms. Fault value (r0949): 24 V voltage [1 bit = 0.1 V].
Remedy:	Check the 24 V DC voltage supply to the power unit.

A30044 (F) Power unit: Overvoltage 24 V alarm

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The following applies for CU31x:
24 V power supply fault for the power unit.
- the 32.0 V threshold was exceeded.
Fault value (r0949):
24 V voltage [1 bit = 0.1 V].
Remedy: Check the 24 V DC voltage supply to the power unit.
Reaction upon F: Infeed: NONE (OFF1, OFF2)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F30045 Power unit: Supply undervoltage

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: Power supply fault in the power unit.
- The voltage monitor signals an undervoltage fault on the module.
The following applies for CU31x:
- the voltage monitoring on the DAC board signals an undervoltage fault on the module.
Remedy: - check the 24 V DC voltage supply to power unit.
- carry out a POWER ON (power off/on) for the component.
- replace the module if necessary.

A30046 (F) Power unit: Undervoltage, alarm

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Before the last restart, a problem occurred at the power unit power supply.
- the voltage monitor in the internal FPGA of the PSA signals an undervoltage fault on the module.
Fault value (r0949):
Register value of the voltage fault register.
Remedy: - check the 24 V DC voltage supply to power unit.
- carry out a POWER ON (power off/on) for the component.
- replace the module if necessary.
Reaction upon F: Infeed: NONE (OFF1, OFF2)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY (POWER ON)

F30047 Cooling system: Cooling medium flow rate too low

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Cooling system: Fault - flow rate has fallen below the fault value
Remedy:

A30048	Power unit: External fan faulty
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The feedback signal from the external fan indicates a fault. - fan faulty, blocked. - feedback signal inaccurate.
Remedy:	- check the external fan and replace if necessary. - if you are using an external fan with feedback, check its wiring (X12.2 or X13.2). Note: If you are using an external fan without feedback, check that the feedback terminal wiring on the power unit is connected to ground and make this connection if necessary (X12.1/2 or X13.1/2).
A30049	Power unit: Internal fan faulty
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The internal fan has failed.
Remedy:	Check the internal fan and replace if necessary.
F30050	Power unit: 24 V supply overvoltage
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	The voltage monitor signals an overvoltage fault on the module.
Remedy:	- check the 24 V power supply. - replace the module if necessary.
F30052	EEPROM data error
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	POWER ON
Cause:	EEPROM data error of the power unit module. Fault value (r0949, interpret hexadecimal): 0: The EEPROM data read in from the power unit module is inconsistent. 1: EEPROM data is not compatible to the firmware of the power unit application. Additional values: Only for internal Siemens troubleshooting.
Remedy:	Re fault value = 0: Replace the power unit module or update the EEPROM data. Re fault value = 1: The following applies for CU31x and CUA31: Update the firmware \SIEMENS\SINAMICS\CODE\SAC\cu31xi.ufw (cua31.ufw)
F30053	FPGA data faulty
Message value:	%1
Drive object:	All objects
Reaction:	NONE
Acknowledge:	POWER ON
Cause:	Power unit module FPGA data error.
Remedy:	Replace the power unit module or update the FPGA data.

A30054 (F)	Power unit: 24 V braking undervoltage
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	If the brake needs to be released during brake control, the P24 voltage must be at least 21.6 V (24 V - 10%) so that the brake is sure to release. If the voltage undershoots the 21.6 V threshold when the brake is released, the alarm is triggered; it goes away again as soon as the voltage rises above a threshold value of 22 V. When the alarm is triggered, the voltage value is shown in the fault value in increments of 0.1 V (e.g. 21.2 V = 212).
Remedy:	Make sure that the 24 V voltage is stable and does not fluctuate downwards by more than 10%.
Reaction upon F:	NONE (OFF1, OFF2, OFF3)
Acknowl. upon F:	IMMEDIATELY

F30060 (A)	Pre-charge contactor monitoring
Message value:	Fault cause: %1 bin
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	At the end of the monitoring time (p0255[0]), the actual state of the pre-charge contactor does not match the desired state. Bit 0: Monitoring time exceeded. Bit 1: Contactor opened during operation. Bit 2: Contactor closed in OFF state.
Remedy:	- check the monitoring time setting p0255[0]. - check the contactor wiring and activation. - replace the contactor.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F30061 (A)	Bridging contactor monitoring
Message value:	Fault cause: %1 bin
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2 (NONE, OFF1)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	At the end of the monitoring time (p0255[1]), the actual state of the bridging contactor does not match the desired state. Bit 0: Monitoring time exceeded. Bit 1: Contactor opened during operation. Bit 2: Contactor closed in OFF state.
Remedy:	- check the monitoring time setting p0255[1]. - check the contactor wiring and activation. - replace the contactor.
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F30062 (N, A)	Bypass contactor has been opened under current
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The bypass contactor for the infeed has been damaged due to (multiple) opening under current. Possible causes: - Scheduled opening under load can be necessary to protect the converter line-up in the event of a ground fault in high-frequency spindles. - Operating the contactor under load can result from incorrect operation of the infeed; for example, if motoring power is drawn from the DC link although no operating enable is present for the infeed.

Remedy: Damaged infeeds must be replaced, to prevent serious damage to the entire converter line-up.
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE
Acknowl. upon A: NONE

F30070 Cycle requested by the power unit module not supported

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A cycle is requested that is not supported by the power unit.
 Fault value (r0949, interpret hexadecimal):
 0: The current control cycle is not supported.
 1: The DRIVE-CLiQ cycle is not supported.
 2: Internal timing problem (clearance between RX and TX instants too low).
 3: Internal timing problem (TX instant too early).
Remedy: The power unit only supports the following cycles:
 62.5 µs, 125 µs, 250 µs and 500 µs
 Re fault value = 0:
 Set a permitted current control cycle.
 Re fault value = 1:
 Set a permitted DRIVE-CLiQ cycle.
 Re fault value = 2, 3:
 Contact the manufacturer (you may have an incompatible firmware version).

F30071 No new actual values received from the power unit module

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The number of actual value telegrams from the power unit module that have failed has exceeded the permissible number.
Remedy: Check the interface (adjustment and locking) to the power unit module.

F30072 Setpoints are no longer being transferred to the power unit

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The following applies for CU31x and CUA31:
 More than one setpoint telegram was not able to be transferred to the power unit module.
Remedy: The following applies for CU31x and CUA31:
 Check the interface (adjustment and locking) to the power unit module.

A30073 (N) Actual value/setpoint preprocessing no longer synchronous

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Communication with the power unit module is no longer in synchronism with the current control cycle.
Remedy: Wait until synchronization is re-established.
Reaction upon N: NONE
Acknowl. upon N: NONE

F30074	Communications error to the power unit module
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	Communication is not possible with the power unit module via the plug connection.
Remedy:	The following applies for CU31x and CUA31: Either replace the Control Unit or the power unit. You must check which of the two components needs to be replaced by replacing one component and then the other (ensuring that the component which is not being tested in each case is fully functioning). If these are not available, then both components must be returned.
F30080	Power unit: Current increasing too quickly
Message value:	Fault cause: %1 bin
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit has detected an excessive rate of rise in the overvoltage range. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame). - V/f operation: Up ramp set too low. - V/f operation: Rated motor current is significantly greater than that of the Motor Module. - infeed: High discharge and post-charging current for voltage dip. - infeed: High post-charging currents for overload when motoring and DC link voltage dip. - infeed: Short-circuit currents at power-up due to the missing line reactor. - power cables are not correctly connected. - power cables exceed the maximum permissible length. - power unit defective. Additional causes for a parallel switching device (r0108.15 = 1): - a power unit has tripped (powered down) due to a ground fault. - the closed-loop circulating current control is either too slow or has been set too fast. Fault value (r0949, interpret bitwise binary): Bit 0: Phase U. Bit 1: Phase V. Bit 2: Phase W.
Remedy:	- check the motor data - if required, carry out commissioning. - check the motor circuit configuration (star-delta) - V/f operation: Increase up ramp. - V/f operation: Check the assignment of the rated currents of the motor and Motor Module. - infeed: Check the line supply quality. - infeed: Reduce the motor load. - infeed: Correct connection of the line reactor. - check the power cable connections. - check the power cables for short-circuit or ground fault. - check the length of the power cables. - replace power unit. For a parallel switching device (r0108.15 = 1) the following additionally applies: - check the ground fault monitoring thresholds (p0287). - check the setting of the closed-loop circulating current control (p7036, p7037).

F30081	Power unit: Switching operations too frequent
Message value:	Fault cause: %1 bin
Drive object:	All objects
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The power unit has executed too many switching operations for current limitation. - closed-loop control is incorrectly parameterized. - motor has a short-circuit or fault to ground (frame). - V/f operation: Up ramp set too low. - V/f operation: Rated motor current is significantly greater than that of the Motor Module. - infeed: High discharge and post-charging current for voltage dip. - infeed: High post-charging currents for overload when motoring and DC link voltage dip. - infeed: Short-circuit currents at power-up due to the missing line reactor. - power cables are not correctly connected. - power cables exceed the maximum permissible length. - power unit defective. Additional causes for a parallel switching device (r0108.15 = 1): - a power unit has tripped (powered down) due to a ground fault. - the closed-loop circulating current control is either too slow or has been set too fast. Fault value (r0949, interpret bitwise binary): Bit 0: Phase U. Bit 1: Phase V. Bit 2: Phase W.
Remedy:	- check the motor data - if required, carry out commissioning. - check the motor circuit configuration (star-delta) - V/f operation: Increase up ramp. - V/f operation: Check the assignment of the rated currents of the motor and Motor Module. - infeed: Check the line supply quality. - infeed: Reduce the motor load. - infeed: Correct connection of the line reactor. - check the power cable connections. - check the power cables for short-circuit or ground fault. - check the length of the power cables. - replace power unit. For a parallel switching device (r0108.15 = 1) the following additionally applies: - check the ground fault monitoring thresholds (p0287). - check the setting of the closed-loop circulating current control (p7036, p7037).
F30105	PU: Actual value sensing fault
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	At least one incorrect actual value channel was detected on the Power Stack Adapter (PSA). The incorrect actual value channels are displayed in the following diagnostic parameters.
Remedy:	Evaluate the diagnostic parameters. If the actual value channel is incorrect, check the components and if required, replace.
A30502	Power unit: DC link voltage, overvoltage
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The power unit has detected overvoltage in the DC link on a pulse inhibit. - device connection voltage too high. - line reactor incorrectly dimensioned. Fault value (r0949, interpret decimal): DC link voltage [1 bit = 100 mV]. See also: r0070 (Actual DC link voltage)

Remedy:

- check the device supply voltage (p0210).
- check the dimensioning of the line reactor.

See also: p0210 (Drive unit line supply voltage)

F30600 SI MM: STOP A initiated

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function in the Motor Module (MM) has detected a fault and initiated STOP A (pulse suppression via the safety shutdown path of the Motor Module).

- forced checking procedure of the safety shutdown path of the Motor Module unsuccessful.
- subsequent response to fault F30611 (defect in a monitoring channel).

Fault value (r0949, interpret decimal):

0: Stop request from the Control Unit.

1005: Pulses suppressed although STO not selected and there is no internal STOP A present.

1010: Pulses enabled although STO is selected or an internal STOP A is present.

1020: Internal software error in the "Internal voltage protection" function. The "internal voltage protection" function is withdrawn. A STOP A that cannot be acknowledged is initiated.

9999: Subsequent response to fault F30611.

Remedy:

- select Safe Torque Off and deselect again.
- replace the Motor Module involved.

Re fault value = 1020:

- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- replace the Motor Module.

Re fault value = 9999:

- carry out diagnostics for fault F30611.

Note:

CU: Control Unit

MM: Motor Module

SI: Safety Integrated

STO: Safe Torque Off / SH: Safe standstill

F30611 SI MM: Defect in a monitoring channel

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: Infeed: NONE (OFF1, OFF2)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function in the Motor Module (MM) has detected a fault in the data cross-check between the Control Unit (CU) and MM and initiated a STOP F.

As a result of this fault, after the parameterized transition has expired (p9858), fault F30600 is output (SI MM: STOP A initiated).

Fault value (r0949, interpret decimal):

0: Stop request from the Control Unit.

1 ... 999:

Number of the cross-checked data that resulted in this fault. This number is also displayed in r9895.

- 1: SI monitoring clock cycle (r9780, r9880).
- 2: SI enable safety functions (p9601, p9801). Crosswise data comparison is only carried out for the supported bits.
- 3: SI SGE changeover tolerance time (p9650, p9850).
- 4: SI transition period STOP F to STOP A (p9658, p9858).
- 5: SI enable Safe Brake Control (p9602, p9802).
- 6: SI Motion enable, safety-relevant functions (p9501, internal value).
- 7: SI pulse suppression delay time for Safe Stop 1 (p9652, p9852).
- 8: SI PROFIsafe address (p9610, p9810).
- 9: SI debounce time for STO/SBC/SS1 (MM) (p9651, p9851).
- 11: SI Safe Brake Adapter mode, BICO interconnection (p9621, p9821).
- 12: SI Safe Brake Adapter relay ON time (p9622[0], p9822[0]).
- 13: SI Safe Brake Adapter relay OFF time (p9622[1], p9822[1]).

1000: Watchdog timer has expired. Within the time of approx. 5 * p9850 too many switching operations have occurred at the safety-related inputs of the Control Unit, or STO (also as subsequent response) was initiated too frequently via PROFIsafe/TM54F.

1001, 1002: Initialization error, change timer / check timer.

2000: Status of the STO selection on the Control Unit and Motor Module are different.

2001: Feedback signal for safe pulse suppression on the Control Unit and Motor Module are different.

2002: Status of the delay timer SS1 on the Control Unit and Motor Module are different.

6000 ... 6999:

Error in the PROFIsafe control. The significance of the individual message values is described in safety message C01711 of the Control Unit.

Remedy:

Re fault value = 1 ... 5 and 7 ... 999:

- check the cross-checked data that resulted in a STOP F.
- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 6:

- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 1000:

- check the wiring of the safety-relevant inputs (SGE) on the Control Unit (contact problems).
- PROFIsafe: Remove contact problems/faults at the PROFIBUS master/PROFINET controller. - check the wiring of the fail-safe inputs at the TM54F (contact problems).

Re fault value = 1001, 1002:

- carry out a POWER ON (power off/on) for all components.
- upgrade the Motor Module software.
- upgrade the Control Unit software.

Re fault value = 2000, 2001, 2002:

- check the tolerance time SGE changeover and if required, increase the value (p9650/p9850, p9652/p9852).
- check the wiring of the safety-relevant inputs (SGE) (contact problems).
- check the cause of the STO selection in r9772. When the SMM functions are active (p9501 = 1), STO can also be selected using these functions.
- replace the Motor Module involved.

Re fault value = 6000 ... 6999:

Refer to the description of the message values in safety message C01711.

Note:

CU: Control Unit

F30625	SI MM: Sign-of-life error in safety data
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive-based "Safety Integrated" function on the Motor Module (MM) has detected an error in the sign-of-life of the safety data between the Control Unit (CU) and MM and initiated a STOP A. - there is either a DRIVE-CLiQ communication error or communication has failed. - a time slice overflow of the safety software has occurred. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.
Remedy:	- select Safe Torque Off and deselect again. - carry out a POWER ON (power off/on) for all components. - check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified. - deselect all drive functions that are not absolutely necessary. - reduce the number of drives. - check the electrical cabinet design and cable routing for EMC compliance Note: CU: Control Unit MM: Motor Module SI: Safety Integrated
F30630	SI MM: Brake control error
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive-based "Safety Integrated" function on the Motor Module (MM) has detected a brake control error and initiated a STOP A. Fault value (r0949, interpret decimal): 10: Fault in "open holding brake" operation. - Parameter p1278 incorrectly set. - No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)). - Ground fault in brake cable.

List of faults and alarms

30:

Fault in "close holding brake" operation.

- No brake connected or wire breakage (check whether brake releases for p1278 = 1 and p9602/p9802 = 0 (SBC deactivated)).

- Short-circuit in brake winding.

40:

Fault in "brake closed" state.

60, 70:

Fault in the brake control circuit of the Control Unit or communication fault between the Control Unit and Motor Module (brake control).

81: SafeBrakeAdapter: Fault in "brake closed" state.

82: SafeBrakeAdapter: Fault in "open brake" state.

83: SafeBrakeAdapter: Fault in "close brake" state.

84,85:

SafeBrakeAdapter: Fault in the brake control circuit of the Control Unit or communication fault between Control Unit and Motor Module (brake control).

Note:

The following causes may apply to fault values:

- motor cable is not shielded correctly.

- defect in control circuit of the Motor Module.

Remedy:

- check parameter p1278 (for SBC, only p1278 = 0 is permissible).

- select Safe Torque Off and deselect again.

- check the motor holding brake connection.

- check the function of the motor holding brake.

- check whether there is a DRIVE-CLiQ communication error between the Control Unit and the Motor Module involved and, if required, carry out a diagnostics routine for the faults identified.

- check that the electrical cabinet design and cable routing are in compliance with EMC regulations (e.g. shield of the motor cable and brake conductors are connected with the shield connecting plate and the motor connectors are tightly screwed to the housing).

- replace the Motor Module involved.

Operation with Safe Brake Module or Safe Brake Adapter:

- check the Safe Brake Module or Safe Brake Adapter connection.

- Replace the Safe Brake Module or Safe Brake Adapter.

Note:

MM: Motor Module

SBC: Safe Brake Control

SI: Safety Integrated

F30640

SI MM: Fault in the shutdown path of the second channel

Message value:

%1

Drive object:

A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction:

OFF2

Acknowledge:

IMMEDIATELY (POWER ON)

Cause:

The Motor Module has detected a communications error with the higher-level control or the TM54F to transfer the safety-relevant information.

Note:

This fault results in a STOP A that can be acknowledged.

Fault value (r0949, interpret decimal):

Only for internal Siemens troubleshooting.

Remedy:

For the higher-level control, the following applies:

- check the PROFIsafe address in the higher-level control and Motor Modules and if required, align.
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

For TM54F, carry out the following steps:

- start the copy function for the node identifier (p9700 = 1D hex).
- acknowledge hardware CRC (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.

The following generally applies:

- upgrade the Motor Module software.

Note:

MM: Motor Module
SI: Safety Integrated
See also: p9810 (SI PROFIsafe address (Motor Module))

F30649 SI MM: Internal software error

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: An internal error in the Safety Integrated software on the Motor Module has occurred.

Note:

This fault results in a STOP A that cannot be acknowledged.

Fault value (r0949, interpret hexadecimal):

Only for internal Siemens troubleshooting.

Remedy:

- carry out a POWER ON (power off/on) for all components.
- re-commission the Safety Integrated function and carry out a POWER ON.
- upgrade the Motor Module software.
- contact the Hotline.
- replace the Motor Module.

Note:

MM: Motor Module
SI: Safety Integrated

F30650 SI MM: Acceptance test required

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The "Safety Integrated" function on the Motor Module requires an acceptance test.

Note:

This fault results in a STOP A that can be acknowledged.

Fault value (r0949, interpret decimal):

130: Safety parameters for the Motor Module not available.

1000: Reference and actual checksum in the Motor Module are not identical (booting).

- at least one checksum-checked piece of data is defective.

2000: Reference and actual checksum on the Motor Module are not identical (commissioning mode).

- reference checksum incorrectly entered into the Motor Module (p9899 not equal to r9898).

2003: Acceptance test is required as a safety parameter has been changed.

2005: The safety logbook has identified that the safety checksums have changed. An acceptance test is required.

3003: Acceptance test is required as a hardware-related safety parameter has been changed.

9999: Subsequent response of another safety-related fault that occurred when booting that requires an acceptance test.

Remedy:

Re fault value = 130:
 - carry out safety commissioning routine.

Re fault value = 1000:
 - again carry out safety commissioning routine.
 - replace the memory card or Control Unit.

Re fault value = 2000:
 - check the safety parameters in the Motor Module and adapt the reference checksum (p9899).

Re fault value = 2003, 2005:
 - Carry out an acceptance test and generate an acceptance report.
 The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
 SINAMICS S120 Function Manual Safety Integrated

Re fault value = 3003:
 - carry out the function checks for the modified hardware and generate an acceptance report.
 The procedure when carrying out an acceptance test as well as an example of the acceptance report are provided in the following literature:
 SINAMICS S120 Function Manual Safety Integrated

Re fault value = 9999:
 - carry out diagnostics for the other safety-related fault that is present.

Note:
 MM: Motor Module
 SI: Safety Integrated
 See also: p9799 (SI reference checksum SI parameters (Control Unit)), p9899 (SI reference checksum SI parameters (Motor Module))

F30651 SI MM: Synchronization with Control Unit unsuccessful

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive-based "Safety Integrated" function is requesting synchronization of the safety time slices on the Control Unit and Motor Module. This synchronization routine was unsuccessful.
 Note:
 This fault results in a STOP A that cannot be acknowledged.
 Fault value (r0949, interpret decimal):
 Only for internal Siemens troubleshooting.

Remedy:
 - carry out a POWER ON (power off/on) for all components.
 - upgrade the Motor Module software.
 - upgrade the Control Unit software.
 Note:
 MM: Motor Module
 SI: Safety Integrated

F30652 SI MM: Illegal monitoring clock cycle

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR

Reaction: OFF2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The Safety Integrated monitoring clock cycle cannot be maintained due to the communication conditions requested in the system.
 Note:
 This fault results in a STOP A that cannot be acknowledged.
 Fault value (r0949, interpret decimal):
 Only for internal Siemens troubleshooting.

Remedy:
 Upgrade the Motor Module software.
 Note:
 MM: Motor Module
 SI: Safety Integrated

F30655	SI MM: Align monitoring functions
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	An error has occurred when aligning the Safety Integrated monitoring functions on the Control Unit (CU) and Motor Module (MM). Control Unit and Motor Module were not able to determine a common set of supported SI monitoring functions. - there is either a DRIVE-CLiQ communication error or communication has failed. - Safety Integrated software releases on the Control Unit and Motor Module are not compatible with one another. Note: This fault results in a STOP A that cannot be acknowledged. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade the Motor Module software. - upgrade the Control Unit software. - check the electrical cabinet design and cable routing for EMC compliance Note: CU: Control Unit MM: Motor Module SI: Safety Integrated
F30656	SI MM: Motor Module parameter error
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	When accessing the Safety Integrated parameters for the Motor Module (MM) in the non-volatile memory, an error has occurred. Note: This fault results in a STOP A that can be acknowledged. Fault value (r0949, interpret decimal): 129: Safety parameters for the Motor Module corrupted. 131: Internal software error on the Control Unit. 255: Internal Motor Module software error.
Remedy:	- re-commission the safety functions. - upgrade the Control Unit software. - upgrade the Motor Module software. - replace the memory card or Control Unit. Note: MM: Motor Module SI: Safety Integrated

F30659	SI MM: Write request for parameter rejected
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The write request for one or several Safety Integrated parameters on the Motor Module (MM) was rejected. Note: This fault does not result in a safety stop response. Fault value (r0949, interpret decimal): 10: An attempt was made to enable the STO function although this cannot be supported. 11: An attempt was made to enable the SBC function although this cannot be supported. 13: An attempt was made to enable the SS1 function although this cannot be supported. 14: An attempt was made to enable the safe motion monitoring function with the higher-level control, although this cannot be supported. 15: An attempt was made to enable the motion monitoring functions integrated in the drive although these cannot be supported. 16: An attempt was made to enable the PROFIsafe communication - although this cannot be supported or the version of the PROFIsafe driver used on the CU and MM is different. 18: An attempt was made to enable the PROFIsafe function for Basic Functions although this cannot be supported. See also: r9771 (SI common functions (Control Unit)), r9871 (SI common functions (Motor Module))
Remedy:	Re fault value = 10, 11, 13, 14, 15, 16, 18: - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved. - use a Motor Module that supports the required function ("Safe Torque Off", "Safe Brake Control", "PROFIsafe/PROFIsafe V2", "motion monitoring functions integrated in the drive"). - upgrade the Motor Module software. - upgrade the Control Unit software. Note: CU: Control Unit MM: Motor Module SBC: Safe Brake Control SI: Safety Integrated SS1: Safe Stop 1 (corresponds to Stop Category 1 acc. to EN60204) STO: Safe Torque Off / SH: Safe standstill
F30662	Error in internal communications
Message value:	%1
Drive object:	A_INF, B_INF, CU_LINK, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	A module-internal communication error has occurred. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.
Remedy:	- carry out a POWER ON (power off/on). - upgrade firmware to later version. - contact the Hotline.
F30664	Error while booting
Message value:	%1
Drive object:	A_INF, B_INF, CU_LINK, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	An error has occurred during booting. Fault value (r0949, interpret hexadecimal): Only for internal Siemens troubleshooting.

Remedy:

- carry out a POWER ON (power off/on).
- upgrade firmware to later version.
- contact the Hotline.

F30665 SI MM: System is defective

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The drive has detected a defect in the system and performed an emergency shutdown.
 Fault value (r0949, interpret hexadecimal):
 Only for internal Siemens troubleshooting.
Remedy: - carry out a POWER ON (power off/on).
 - upgrade firmware to later version.
 - contact the Hotline.

A30666 (F) SI Motion MM: Steady-state (static) 1 signal at the F-DI for safety-relevant acknowledgement

Message value: -
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: A logical 1 signal is present at the F-DI parameterized in p10106 for more than 10 seconds. A logical 0 signal must be present statically (steady-state) at the F-DI. This avoids unintentional safety-relevant acknowledgement (or the "Internal Event Acknowledge" signal) if a wire breaks or one of the two digital inputs bounces.
Remedy: Set F-DI (see p10106) to a logical 0 signal.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY

F30672 SI CU: Control Unit software incompatible

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The existing Control Unit software does not support the safe drive-based motion monitoring function.
 Note:
 This fault results in a STOP A that cannot be acknowledged.
 Fault value (r0949, interpret decimal):
 Only for internal Siemens troubleshooting.
Remedy: - check whether there are faults in the safety function alignment between the Control Unit and the Motor Module involved (F01655, F30655) and if required, carry out diagnostics for the faults involved.
 - use a Control Unit that supports the safe motion monitoring function.
 - upgrade the Control Unit software.
 Note:
 SI: Safety Integrated

F30680	SI Motion MM: Checksum error safety monitoring functions
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The actual checksum calculated by the Motor Module and entered in r9398 over the safety-relevant parameters does not match the reference checksum saved in p9399 at the last machine acceptance. Safety-relevant parameters have been changed or a fault is present. Note: This fault results in a STOP A that can be acknowledged. Fault value (r0949, interpret decimal): 0: Checksum error for SI parameters for motion monitoring. 1: Checksum error for SI parameters for component assignment.
Remedy:	- check the safety-relevant parameters and if required, correct. - set the reference checksum to the actual checksum. - perform a POWER ON if safety parameters requiring a POWER ON have been modified. - carry out an acceptance test. Note: SI: Safety Integrated
F30681	SI Motion MM: Incorrect parameter value
Message value:	Parameter: %1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The parameter value cannot be parameterized with this value. Note: This message does not result in a safety stop response. Fault value (r0949, interpret decimal): Parameter number with the incorrect value.
Remedy:	Correct the parameter value. If the encoder parameters (p9526/p9326) have different values, start the copy function for SI parameters on the drive (p9700 = 57 hex). Also check p9316.0 for fault value 9317.
F30682	SI Motion MM: Monitoring function not supported
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The monitoring function enabled in p9301, p9501, p9601 or p9801 is not supported in this firmware version. Note: This message does not result in a safety stop response. Fault value (r0949, interpret decimal): 1: Monitoring function SLP not supported (p9301.1). 2: Monitoring function SCA not supported (p9301.7 and p9301.8 ... 15). 3: Monitoring function SLS override not supported (p9301.5). 4: Monitoring function external ESR activation not supported (p9301.4). 5: Monitoring function FDI in PROFI-safe not supported (p9301.30). 6: Enable actual value synchronization not supported (p9301.3). 9: Monitoring function not supported, enable bit reserved (p9301.2, p9301.17 ... 29, p9301.31, if required p9301.6). 30: The firmware version of the Motor Module is older than the version of the Control Unit.
Remedy:	- deselect the monitoring function involved (p9301, p9301, p9303, p9601, p9801). - Upgrade the Motor Module firmware. See also: p9301 (SI Motion enable safety functions (Motor Module)), p9501 (SI Motion enable safety functions (Control Unit)), p9503 (SI Motion SCA (SN) enable (Control Unit)), p9601 (SI enable, functions integrated in the drive (Control Unit)), p9801 (SI enable, functions integrated in the drive (Motor Module))

F30683 SI Motion MM: SOS/SLS enable missing

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The safety-relevant basic function "SOS/SLS" is not enabled in p9301 although other safety-relevant monitoring functions are enabled.
Note:
This message does not result in a safety stop response.
Remedy: Enable the function "SOS/SLS" (p9301.0).
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9301 (SI Motion enable safety functions (Motor Module))

F30685 SI Motion MM: Safely-Limited Speed limit value too high

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause: The limit value for the function "Safely-Limited Speed" (SLS) is greater than the speed that corresponds to an encoder limit frequency of 500 kHz.
Note:
This message does not result in a safety stop response.
Fault value (r0949, interpret decimal):
Maximum permissible speed.
Remedy: Correct the limit values for SLS and carry out a POWER ON.
Note:
SI: Safety Integrated
SLS: Safely-Limited Speed / SG: Safely reduced speed
See also: p9331 (SI Motion SLS limit values (Motor Module))

F30688 SI Motion MM: Actual value synchronization not permissible

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY (POWER ON)
Cause:
- It is not permissible to enable actual value synchronization for a 1-encoder system.
- It is not permissible to simultaneously enable actual value synchronization and a monitoring function with absolute reference (SCA/SLP).
Note:
This fault results in a STOP A that cannot be acknowledged.
Remedy:
- Either select the "actual value synchronization" function or parameterize a 2-encoder system.
- Either deselect the function "actual value synchronization" or the monitoring functions with absolute reference (SCA/SLP) and carry out a POWER ON.
Note:
SCA: Safe Cam / SN: Safe software cam
SI: Safety Integrated
SLP: Safely-Limited Position / SE: Safe software limit switches
See also: p9501 (SI Motion enable safety functions (Control Unit)), p9526 (SI Motion encoder assignment second channel)

F30692	SI Motion MM: Incorrect parameter value encoderless
Message value:	Parameter: %1
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The parameter cannot be set to this value if encoderless motion monitoring functions have been parameterized in p9306. Note: This message does not result in a safety stop response. Fault value (r0949, interpret decimal): Parameter number with the incorrect value. See also: p9301 (SI Motion enable safety functions (Motor Module))
Remedy:	Correct the parameter value or deselect encoderless motion monitoring functions. See also: p9301 (SI Motion enable safety functions (Motor Module)), p9501 (SI Motion enable safety functions (Control Unit))
A30693 (F)	SI MM: Safety parameter settings changed, warm restart/POWER ON required
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Safety parameters have been changed; these will only take effect following a warm restart or POWER ON. Alarm value (r2124, interpret decimal): Parameter number of the safety parameter which has changed, necessitating a warm restart or POWER ON.
Remedy:	- carry out a warm restart (p0971 = 3) - carry out a POWER ON (power off/on) for all components.
Reaction upon F:	NONE (OFF1, OFF2, OFF3)
Acknowled. upon F:	POWER ON
C30700	SI Motion MM: STOP A initiated
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive is stopped via a STOP A (pulses are suppressed via the safety shutdown path of the Control Unit). Possible causes: - stop request from the Control Unit. - pulses not suppressed after a parameterized time (p9357) after test stop selection. - subsequent response to the message C30706 "SI Motion MM: Safe Acceleration Monitoring, limit exceeded". - subsequent response to the message C30714 "SI Motion MM: Safely-Limited Speed exceeded". - subsequent response to the message C30701 "SI Motion MM: STOP B initiated".
Remedy:	- remove the cause to the fault on the Control Unit. - check the value in p9357, if required, increase the value. - check the shutdown path of the Control Unit (check DRIVE-CLiQ communication). - carry out a diagnostics routine for message C30706. - carry out a diagnostics routine for message C30714. - carry out a diagnostics routine for message C30701. - replace the Motor Module/Power Module - replace Control Unit. This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe. Note: SI: Safety Integrated

C30701 SI Motion MM: STOP B initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF3

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP B (braking along the OFF3 ramp).
As a result of this fault, after the time parameterized in p9356 has expired, or the speed threshold parameterized in p9360 has been undershot, message C30700 "SI Motion MM: STOP A initiated" is output.
Possible causes:
- stop request from the Control Unit.
- subsequent response to the message C30714 "SI Motion MM: Safely limited speed exceeded".
- subsequent response to the message C30711 "SI Motion MM: Defect in a monitoring channel".

Remedy: - remove the cause of the fault on the Control Unit
- carry out a diagnostics routine for message C01714.
- carry out a diagnostics routine for message C01711.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated

C30706 SI Motion MM: SBR limit exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: Motion monitoring functions with encoder: SBR - Safe Acceleration Monitoring. After initiating STOP B (SS1) or STOP C (SS2), the speed has exceeded the selected tolerance.
Encoderless motion monitoring function: SBR - Safe Brake Ramp Monitoring. After initiating STOP B (SS1) or SLS changeover to the lower speed stage, the speed has exceeded the selected tolerance.
The drive is shut down by the message C30700 "SI Motion MM: STOP A initiated".

Remedy: Check the braking behavior and, if necessary, adapt the tolerance for the "Safe Acceleration Monitor" or modify the parameter settings for the "safe brake ramp".
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
See also: p9548 (SI Motion SBR actual velocity tolerance (Control Unit))

C30707 SI Motion MM: Tolerance for safe operating stop exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The actual position has distanced itself further from the target position than the standstill tolerance.
The drive is shut down by the message C30701 "SI Motion MM: STOP B initiated".

Remedy: - check whether safety faults are present and if required carry out the appropriate diagnostic routines for the particular faults.
- check whether the standstill tolerance matches the accuracy and control dynamic performance of the axis.
This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
Note:
SI: Safety Integrated
SOS: Safe Operating Stop / SBH: Safe operating stop
See also: p9530 (SI Motion standstill tolerance (Control Unit))

C30708 SI Motion MM: STOP C initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: STOP2

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP C (braking along the OFF3 ramp).
 "Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
 Possible causes:
 - stop request from the higher-level control.
 - subsequent response to the message C30714 "SI Motion MM: Safely limited speed exceeded".
 See also: p9552 (SI Motion transition time STOP C to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
 - carry out a diagnostics routine for message C30714.
 This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.

Note:
 SI: Safety Integrated
 SOS: Safe Operating Stop / SBH: Safe operating stop

C30709 SI Motion MM: STOP D initiated

Message value: -

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: The drive is stopped via a STOP D (braking along the path).
 "Safe Operating Stop" (SOS) is activated after the parameterized timer has expired.
 Possible causes:
 - stop request from the Control Unit.
 - subsequent response to the message C30714 "SI Motion: Safely limited speed exceeded".
 See also: p9353 (SI Motion transition time STOP D to SOS (Motor Module)), p9553 (SI Motion transition time STOP D to SOS (SBH) (Control Unit))

Remedy: - remove the cause of the fault at the control.
 - carry out a diagnostics routine for message C30714.
 This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.

Note:
 SI: Safety Integrated
 SOS: Safe Operating Stop / SBH: Safe operating stop

C30711 SI MM MM: Defect in a monitoring channel

Message value: %1

Drive object: SERVO, VECTOR

Reaction: NONE

Acknowledge: IMMEDIATELY (POWER ON)

Cause: When cross-checking and comparing the two monitoring channels, the drive detected a difference between the input data or results of the monitoring functions and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.
 If at least one monitoring function is active, then after the parameterized timer has expired, the message C30701 "SI Motion: STOP B initiated" is output. The message is output with message value 1031 when the Sensor Module hardware is replaced.
 The following message values may also occur in the following cases if the cause that is explicitly mentioned does not apply:
 - differently parameterized cycle times (p9500/p9300, p9511/p9311).
 - differently parameterized axis types (p9502/p9302).
 - excessively fast cycle times (p9500/p9300, p9511/p9311).
 - incorrect synchronization.
 Message value (r9749, interpret decimal):
 0 ... 999: Number of the cross-checked data that resulted in this message. Refer to safety message C01711 for a description of the individual data.
 The significance of the individual message values is described in safety message C01711 of the Control Unit.
 1000: Watchdog timer has expired. Too many signal changes have occurred at safety-relevant inputs.

1001: Initialization error of watchdog timer.
 1005: Pulses already suppressed for test stop selection.
 1011: Acceptance test status between the monitoring channels differ.
 1012: Plausibility violation of the actual value from the encoder.
 1020: Cyc. communication failure between the monit. cycles.
 1021: Cyc. communication failure between the monit. channel and Sensor Module.
 1023: Error in the effectiveness test in the DRIVE-CLiQ encoder
 1030: Encoder fault detected from another monitoring channel.
 1031: Data transfer error between the monitoring channel and the Sensor Module (p9526/p9326).
 1040: Pulses suppressed with active encoderless monitoring functions.
 1041: Current absolute value too low (encoderless)
 1042: Current/voltage plausibility error
 1043: Too many acceleration phases
 1044: Actual current values plausibility error.
 5000 ... 5140: PROFIsafe message values.
 The significance of the individual message values is described in safety message C01711 of the Control Unit.
 6000 ... 6166: PROFIsafe message values (PROFIsafe driver for PROFIBUS DP V1/V2 and PROFINET).
 The significance of the individual message values is described in safety message C01711 of the Control Unit.
 See also: p9555 (SI Motion transition time STOP F to STOP B (Control Unit)), r9725 (SI Motion, diagnostics STOP F)

Remedy:

Re message value = 1030:
 - check the encoder connection.
 - if required, replace the encoder.

Re message value = 1031:
 When replacing a Sensor Module, carry out the following steps:
 - start the copy function for the node identifier on the drive (p9700 = 1D hex).
 - acknowledge the hardware CRC on the drive (p9701 = EC hex).
 - save all parameters (p0977 = 1).
 - carry out a POWER ON (power off/on) for all components.
 The following always applies:
 - check the encoder connection.
 - if required, replace the encoder.

Re message value = 1040:
 - deselect encoderless monitoring functions, select and deselect STO.
 - if monitoring function is active, issue SLS pulse enable within 5 s of deselecting STO.

Re other message values:
 - The significance of the individual message values is described in safety message C01711 of the Control Unit.

Note:
 This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe.
 See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))

C30712 SI Motion MM: Defect in F-IO processing

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: When cross checking and comparing the two monitoring channels, the drive detected a difference between parameters or results of the F-IO processing and initiated a STOP F. One of the monitoring functions no longer reliably functions - i.e. safe operation is no longer possible.
 The safety message C30711 with message value 0 is also displayed due to initiation of STOP F.
 If at least one monitoring function is active, the safety message C30701 "SI Motion: STOP B initiated" is output after the parameterized timer has expired.
 Message value (r9749, interpret decimal):
 Number of the cross-checked data that resulted in this message.
 Refer to the description of the message values in safety message C01712.

Remedy:

- check parameterization in the parameters involved and correct if required.
 - ensure equality by copying the SI data to the second channel and then carry out an acceptance test.
 - check monitoring clock cycle in p9500 and p9300 for equality.

Note:
 This message can be acknowledged via F-DI or PROFIsafe.
 See also: p9300 (SI Motion monitoring clock cycle (Motor Module)), p9500 (SI Motion monitoring clock cycle (Control Unit))

C30714	SI Motion MM: Safely-Limited Speed exceeded
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The drive had moved faster than that specified by the velocity limit value (p9331). The drive is stopped as a result of the configured stop response (p9363). Message value (r9749, interpret decimal): 100: SLS1 exceeded. 200: SLS2 exceeded. 300: SLS3 exceeded. 400: SLS4 exceeded. 1000: Encoder limit frequency exceeded.
Remedy:	- check the traversing/motion program in the control. - check the limits for "Safely-Limited Speed" (SLS) and if required, adapt (p9331). This message can only be acknowledged via the Terminal Module 54F (TM54F) or PROFIsafe. Note: SI: Safety Integrated SLS: Safely-Limited Speed / SG: Safely reduced speed See also: p9331 (SI Motion SLS limit values (Motor Module)), p9363 (SI Motion SLS stop response (Motor Module))
C30770	SI Motion MM: Discrepancy error affecting the fail-safe inputs/outputs
Message value:	%1
Drive object:	SERVO
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The safety input terminals or output terminals show a different state longer than that parameterized in p10002 (or p10102). Fault value (r0949, interpret hexadecimal): yyyyxxxx hex xxxx: The safety-relevant input terminals F-DI indicate a discrepancy. Bit 0: Discrepancy for F-DI 0 Bit 1: Discrepancy for F-DI 1 ... yyyy: The safety-relevant output terminals F-DO indicate a discrepancy. Bit 0: Discrepancy for F-DO 0 ... Note: If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.

Remedy:

- check the wiring of the F-DI (contact problems).
- carry out safe acknowledgment (p10006 or INTERNAL EVENT ACKNOWLEDGE via PROFIsafe).

Note:
 Discrepancy error of an F-DI can only be completely acknowledged if safe acknowledgement was carried out once the cause of the error was resolved (p10106). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state.
 F-DI: Failsafe Digital Input
 F-DO: Failsafe Digital Output
 Where switching operations recur cyclically on the FDIs, the discrepancy time must be parameterized as follows:
 td = possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p10000).
 tp = period for a switching operation in ms.
 The following rules must be adhered to:
 $p10002 < (tp/2) - td$ (discrepancy time must be less than half the period minus the actual discrepancy time)
 $p10002 \geq p10000$ (discrepancy time must be no less than P10000)
 $p10002 > td$ (discrepancy time must be greater than the switch discrepancy time which may actually apply)
 Example: If SI sampling cycle is 12 ms and switching frequency is 110 ms, the maximum discrepancy time which can be set is as follows:
 $p10002 \leq 110ms/2 - 12 ms = 43 ms$; this rounds off to $P10002 \leq 36 ms$ (Since the sampling time can only be accepted as a whole SI sampling cycle, the value will need to be rounded up or down to a whole SI sampling time value if it is not an exact multiple of an SI sampling cycle.)

A30772 Test stop fail-safe inputs/outputs active

Message value: -
Drive object: SERVO
Reaction: NONE
Acknowledge: NONE
Cause: The test stop for the fail-safe inputs and/or outputs is currently in progress.
 F1773 is output when an error occurs during the test stop.
Remedy: The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.

F30773 Motor Module test stop faulty

Message value: %1
Drive object: SERVO
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A fault has occurred on the MM side during the test stop for the fail-safe outputs.
 The fault value is output in RRRVWXYZ hex format.
 The wildcards V, W, X must be interpreted as hexadecimal values and evaluated as binary values.
 Bit 0 stands for DO 0, bit 1 for DO 1, bit 2 for DO 2, and bit 3 for DO 4.
 The wildcards Z and Y must be evaluated as hexadecimal values.
 The meaning of the wildcards is as follows:
 R: Reserved
 V: State of the affected DO channel (see X) on the MM (corresponds to the expected state in the case of faulty test stop state)
 W: Required state of the affected DO channel (see X)
 X: DO channels concerned which are indicating a fault
 Y: Reason for the test stop fault
 Z: State of the test stop in which the fault has occurred
 Reason for the test stop fault (Y):
 1 = CU side in incorrect test stop state (internal fault)
 2 = States of the DO(s) (CU305: readback via DI22/CU240, readback via DI2) not as expected
 3 = Incorrect timer state on MM side (internal fault)
 4 = States of the Diag-DO(s) (CU305: internal readback on the Motor Module channel) not as expected
 5 = States of the second Diag-DO(s) (CU305: internal readback on the CU channel) not as expected.
 X and V indicate the DI or Diag-DO state dependent upon the reason for the fault (2 or 4).
 In the event of multiple test stop faults, the first one that occurred is shown.

Test stop state (Z) and associated test actions:

0 to 3 Synchronization phase of test stop between CU and Motor Module no switching operations

4 DO + OFF and DO - OFF

5 Check to see if states are as expected

6 DO + ON and DO - ON

7 Check to see if states are as expected

8 DO + OFF and DO - ON

9 Check to see if states are as expected

10 DO + ON and DO - OFF

11 Check to see if states are as expected

12 DO + OFF and DO - OFF

13 Check to see if states are as expected

14 End of test stop

Diag expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5 :0/-/-/1

7 :0/-/-/0

8 :0/-/-/0

11 :1/-/-/1

13 :0/-/-/1

Second Diag expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5 :-/-/-/1

7 :-/-/-/0

8 :-/-/-/1

11 :-/-/-/0

13 :-/-/-/1

DI expected states in table format:

Test stop state: Expectation Mode 1 / Mode 2 / Mode 3 / Mode 4

5: -/1/0/-

7: -/0/1/-

8: -/0/0/-

11:-/0/0/-

13:-/1/0/-

Example:

Alarm 1773 (CU) is signaled with fault value 0001_0127 and alarm 30773 (MM) is signaled with fault value 0000_0127. This means: In state 7 (Z=7) the state of the external readback signal was not set correctly (Y=2) after DO-0 (X=1) was switched to ON/ON. Fault value 0001_0127 indicates that 0 was expected (W=0) and 1 (V=1) was read back from the hardware. Fault value 0000_0127 on the MM indicates that the states were as expected. In the case of alarm 30773 W and V are always identical; a value of 0 always means that 0 was expected at the readback input but was not present on the other channel (CU).

Remedy:

Check the wiring of the F-DOs and restart the test stop. The fault is withdrawn once the test stop is successfully completed.

In the event of multiple test stop faults, the first one that occurred is shown. Once the test stop has been restarted the next queued test stop fault will be signaled (if there is one).

C30798

SI Motion MM: Test stop running

Message value:

-

Drive object:

SERVO, VECTOR

Reaction:

NONE

Acknowledge:

IMMEDIATELY (POWER ON)

Cause:

The test stop is active.

Remedy:

None necessary.

The message is withdrawn when the test stop is finished.

Note:

SI: Safety Integrated

C30799	SI Motion MM: Acceptance test mode active
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The acceptance test mode is active. The POWER ON signals of the safety-relevant motion monitoring functions can be acknowledged during the acceptance test using the acknowledgement functions of the higher-level control.
Remedy:	None necessary. The message is withdrawn when exiting the acceptance test mode. Note: SI: Safety Integrated

N30800 (F)	Power unit: Group signal
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	NONE
Cause:	The power unit has detected at least one fault.
Remedy:	Evaluates other actual messages.
Reaction upon F:	OFF2
Acknowl. upon F:	IMMEDIATELY

F30801	Power unit DRIVE-CLiQ: Sign-of-life missing
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. The computing time load might be too high. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0A hex: The sign-of-life bit in the receive telegram is not set.
Remedy:	- check the electrical cabinet design and cable routing for EMC compliance - remove DRIVE-CLiQ components that are not required. - deselect functions that are not required. - if required, increase the sampling times (p0112, p0115). - replace the component involved.

F30802	Power unit: Time slice overflow
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Time slide overflow.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.

A30804 (F)	Power unit: CRC
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	CRC error actuator
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
Reaction upon F:	Infeed: OFF2 (OFF1) Servo: OFF2 (OFF1, OFF3) Vector: OFF2 (OFF1, OFF3)
Acknowl. upon F:	IMMEDIATELY
F30805	Power unit: EPROM checksum error
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Internal parameter data is corrupted. Fault value (r0949, interpret hexadecimal): 01: EEPROM access error. 02: Too many blocks in the EEPROM.
Remedy:	Replace the module.
F30809	Power unit: Switching information not valid
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	For 3P gating unit: The last switching status word in the setpoint telegram is identified by the end ID. Such an end ID was not found.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
A30810 (F)	Power unit: Watchdog timer
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	When booting it was detected that the cause of the previous reset was an SAC watchdog timer overflow.
Remedy:	- carry out a POWER ON (power off/on) for all components. - upgrade firmware to later version. - contact the Hotline.
Reaction upon F:	NONE (OFF2)
Acknowl. upon F:	IMMEDIATELY

F30820 Power unit DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 01 hex:
CRC error.
xx = 02 hex:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 03 hex:
Telegram is longer than specified in the length byte or in the receive list.
xx = 04 hex:
The length of the receive telegram does not match the receive list.
xx = 05 hex:
The type of the receive telegram does not match the receive list.
xx = 06 hex:
The address of the component in the telegram and in the receive list do not match.
xx = 07 hex:
A SYNC telegram is expected - but the received telegram is not a SYNC telegram.
xx = 08 hex:
No SYNC telegram is expected - but the received telegram is one.
xx = 09 hex:
The error bit in the receive telegram is set.
xx = 10 hex:
The receive telegram is too early.
Remedy:
- carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F30835 Power unit DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 21 hex:
The cyclic telegram has not been received.
xx = 22 hex:
Timeout in the telegram receive list.
xx = 40 hex:
Timeout in the telegram send list.
Remedy:
- carry out a POWER ON.
- replace the component involved.
See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F30836	Power unit DRIVE-CLiQ: Send error for DRIVE-CLiQ data
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. Data were not able to be sent. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 41 hex: Telegram type does not match send list.
Remedy:	Carry out a POWER ON.
F30837	Power unit DRIVE-CLiQ: Component fault
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 20 hex: Error in the telegram header. xx = 23 hex: Receive error: The telegram buffer memory contains an error. xx = 42 hex: Send error: The telegram buffer memory contains an error. xx = 43 hex: Send error: The telegram buffer memory contains an error.
Remedy:	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.
F30845	Power unit DRIVE-CLiQ: Cyclic data transfer error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Control Unit to the power unit concerned. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0B hex: Synchronization error during alternating cyclic data transfer.
Remedy:	Carry out a POWER ON. See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)
F30850	Power unit: Internal software error
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: OFF1 (NONE, OFF2, OFF3) Vector: OFF1 (NONE, OFF2, OFF3)
Acknowledge:	POWER ON
Cause:	An internal software error has occurred in the power unit. Fault value (r0949, interpret decimal): Only for internal Siemens troubleshooting.

Remedy:

- replace power unit.
- if required, upgrade the firmware in the power unit.
- contact the Hotline.

F30851 Power unit DRIVE-CLiQ (CU): Sign-of-life missing

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Servo: OFF2 (NONE, OFF1, OFF3)
Vector: OFF2 (NONE, OFF1, OFF3)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0A hex = 10 dec:
The sign-of-life bit in the receive telegram is not set.
Remedy: Upgrade the firmware of the component involved.

A30853 Power unit: Sign-of-life error cyclic data

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The power unit has detected that the cyclic setpoint telegrams of the Control Unit have not been updated on time. At least two sign-of-life errors have occurred within the window set in p7788.
Remedy: - check the electrical cabinet design and cable routing for EMC compliance
- reduce the size of the window (p7788) for monitoring.

F30860 Power unit DRIVE-CLiQ (CU): Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: OFF2

xx = 14 hex = 20 dec:
The length of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 04 hex = 04 dec:
The length of the receive telegram does not match the receive list.
xx = 15 hex = 21 dec:
The type of the receive telegram does not match the receive list and the receive telegram is too early.
xx = 05 hex = 05 dec:
The type of the receive telegram does not match the receive list.

xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex = 06 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 09 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy:

- carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F30885 CU DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex = 26 dec:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex = 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.
xx = 62 hex = 98 dec:
Error at the transition to cyclic operation.

Remedy:

- check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.

F30886 PU DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy:

Carry out a POWER ON.

F30887	Power unit DRIVE-CLiQ (CU): Component fault
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	Fault detected on the DRIVE-CLiQ component (power unit) involved. Faulty hardware cannot be excluded. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 20 hex: Error in the telegram header. xx = 23 hex: Receive error: The telegram buffer memory contains an error. xx = 42 hex: Send error: The telegram buffer memory contains an error. xx = 43 hex: Send error: The telegram buffer memory contains an error. xx = 60 hex: Response received too late during runtime measurement. xx = 61 hex: Time taken to exchange characteristic data too long.
Remedy:	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.

F30895	PU DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Servo: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the power unit to the Control Unit involved. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0B hex: Synchronization error during alternating cyclic data transfer.
Remedy:	Carry out a POWER ON. See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F30896	Power unit DRIVE-CLiQ (CU): Inconsistent component properties
Message value:	Component number: %1
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Servo: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The properties of the DRIVE-CLiQ component (power unit), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced. Fault value (r0949, interpret decimal): Component number.
Remedy:	- carry out a POWER ON. - when a component is replaced, the same component type and if possible the same firmware version should be used. - when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F30897	DRIVE-CLiQ (CU) power unit: no communication with component
Message value:	Preliminary component number: %1
Drive object:	VECTOR
Reaction:	OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	Communication with the DRIVE-CLiQ component (power unit) specified by the fault value is not possible. One cause may, for example, be that a DRIVE-CLiQ cable has been withdrawn. Fault value (r0949, interpret decimal): Component ID.
Remedy:	- check the DRIVE-CLiQ connections. - carry out a POWER ON.
F30899 (N, A)	Power unit: Unknown fault
Message value:	New message: %1

F31100 (N, A)	Encoder 1: Zero mark distance error
Message value:	%1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	ENCODER (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	The measured zero mark distance does not correspond to the parameterized zero mark distance. For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal): Last measured zero mark distance in increments (4 increments = 1 encoder pulse). The sign designates the direction of motion when detecting the zero mark distance. See also: p0491 (Motor encoder fault response ENCODER)
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - check the encoder type (encoder with equidistant zero marks). - adapt the parameter for the distance between zero marks (p0424, p0425). - if message output above speed threshold, reduce filter time if necessary (p0438). - replace the encoder or encoder cable
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE
Acknowl. upon A:	NONE
F31101 (N, A)	Encoder 1: Zero marked failed
Message value:	%1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	The 1.5 x parameterized zero mark distance was exceeded. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal): Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse). See also: p0491 (Motor encoder fault response ENCODER)
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - check the encoder type (encoder with equidistant zero marks). - adapt the parameter for the clearance between zero marks (p0425). - if message output above speed threshold, reduce filter time if necessary (p0438). - when p0437.1 is active, check p4686. - replace the encoder or encoder cable
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F31103 (N, A)	Encoder 1: Amplitude error, track R
Message value:	R track: %1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	ENCODER (IASC/DCBRAKE, NONE)
Acknowledge:	PULSE INHIBIT
Cause:	The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 1. The fault can be initiated when the unipolar voltage level is exceeded (RP/RN) or if the differential amplitude is under-shot. Fault value (r0949, interpret hexadecimal): xxxx hex: xxxx = Signal level, track R (16 bits with sign). The response thresholds of the unipolar signal levels of the encoder are between < 1400 mV and > 3500 mV. The response threshold for the differential signal level of the encoder is < -1600 mV. A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec. Note: The analog value of the amplitude error is not measured at the same time with the hardware fault output by the Sensor Module. The fault value can only be represented between -32767dec and 32767dec (-770 mV ... 770 mV). The signal level is not evaluated unless the following conditions are satisfied: - Sensor Module properties available (r0459.31 = 1). - Monitoring active (p0437.31 = 1). See also: p0491 (Motor encoder fault response ENCODER)
Remedy:	- check the speed range; frequency characteristic (amplitude characteristic) of the measuring equipment might not be sufficient for the speed range - check that the encoder cables and shielding are routed in compliance with EMC. - check the plug connections and contacts of the encoder cable. - check whether the zero mark is connected and the signal cables RP and RN have been connected correctly - replace the encoder cable. - if the coding disk is soiled or the lighting aged, replace the encoder.

F31115 (N, A) Encoder 1: Amplitude error track A or B ($A^2 + B^2$)

Message value: A track: %1, B-track: %2
Drive object: ENCODER, SERVO, VECTOR
Reaction: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: The amplitude (root of $A^2 + B^2$) for encoder 1 exceeds the permissible tolerance.
 Fault value (r0949, interpret hexadecimal):
 yyyxxxx hex:
 yyyy = Signal level, track B (16 bits with sign).
 xxxx = Signal level, track A (16 bits with sign).
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
 The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
 Note for sensors modules for resolvers (e. g. SMC10):
 The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.
 A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.
 Note:
 The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
 See also: p0491 (Motor encoder fault response ENCODER)

Remedy:

- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).

The following applies to measuring systems without their own bearing system:

- adjust the scanning head and check the bearing system of the measuring wheel.

The following applies for measuring systems with their own bearing system:

- ensure that the encoder housing is not subject to any axial force.

F31117 (N, A) Encoder 1: Inversion error signals A and B and R

Message value: Fault cause: %1 bin
Drive object: ENCODER, SERVO, VECTOR
Reaction: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: IMMEDIATELY
Cause: For a square-wave encoder (bipolar, double ended) the A* and B* and R* signals are not inverted with respect to signals A and B and R.
 Fault value (r0949, interpret binary):
 Bits 0 - 15: Only for internal Siemens troubleshooting.
 Bit 16: Error track A.
 Bit 17: Error track B.
 Bit 18: Error track R.
Note:
 For SMC30 (order no.. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), CUA32, and CU310, the following applies:
 A square-wave encoder without track R is used and track monitoring (p0405.2 = 1) is activated.
 See also: p0491 (Motor encoder fault response ENCODER)

Remedy: Check the encoder/cable: Does the encoder provide signals and the associated inverted signals?
Note:
For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), the following applies:
- check the setting of p0405 (p0405.2 = 1 is only possible if the encoder is connected at X520).
For a square-wave encoder without track R, the following jumpers must be set for the connection at X520 (SMC30) or X23 (CUA32, CU310):
- pin 10 (reference signal R) <--> pin 7 (encoder power supply, ground)
- pin 11 (reference signal R inverted) <--> pin 4 (encoder power supply)

Message value: %1

Drive object: ENCODER, SERVO, VECTOR

Reaction: ENCODER

Acknowledge: IMMEDIATELY

Cause: Fault in internal reference voltage of ASICs for encoder 1.
 Fault value (r0949, interpret decimal):
 1: Reference voltage error.
 2: Internal undervoltage.
 3: Internal overvoltage.

Remedy: Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F31123 (N, A) Encoder 1: Signal level A/B unipolar outside tolerance

Message value: Fault cause: %1 bin
Drive object: ENCODER, SERVO, VECTOR
Reaction: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: The unipolar level (AP/AN or BP/BN) for encoder 1 is outside the permissible tolerance.
Fault value (r0949, interpret binary):
Bit 0 = 1: Either AP or AN outside the tolerance.
Bit 16 = 1: Either BP or BN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).
See also: p0491 (Motor encoder fault response ENCODER)
Remedy:
- make sure that the encoder cables and shielding are installed in an EMC-compliant manner.
- check the plug connections and contacts of the encoder cable.
- check the short-circuit of a signal cable with mass or the operating voltage.
- replace the encoder cable.

F31125 (N, A) Encoder 1: Amplitude error track A or B overcontrolled

Message value: A track: %1, B-track: %2
Drive object: ENCODER, SERVO, VECTOR
Reaction: ENCODER (IASC/DCBRAKE, NONE)
Acknowledge: PULSE INHIBIT
Cause: The amplitude of track A or B for encoder 1 exceeds the permissible tolerance band.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex:
yyyy = Signal level, track B (16 bits with sign).
xxxx = Signal level, track A (16 bits with sign).
The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note for sensors modules for resolvers (e. g. SMC10):
The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.
A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.
Note:
The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
See also: p0491 (Motor encoder fault response ENCODER)
Remedy:
- check that the encoder cables and shielding are routed in compliance with EMC.
- replace the encoder or encoder cable

F31126 (N, A)	Encoder 1: Amplitude AB too high
Message value:	Amplitude: %1, Angle: %2
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	ENCODER (IASC/DCBRAKE, NONE)
Acknowledge:	PULSE INHIBIT
Cause:	The amplitude (root of $A^2 + B^2$ or $A + B$) for encoder 1 exceeds the permissible tolerance. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex: yyyy = Angle xxxx = Amplitude, i.e. root from $A^2 + B^2$ (16 bits without sign) The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %). The response threshold for $(A + B)$ is > 1120 mV or the root of $(A^2 + B^2) > 955$ mV. A signal level of 500 mV peak value corresponds to the numerical value of 299A hex = 10650 dec. The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is at the negative zero crossover of track B. Note: The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module. See also: p0491 (Motor encoder fault response ENCODER)
Remedy:	- check that the encoder cables and shielding are routed in compliance with EMC. - replace the encoder or encoder cable
Reaction upon N:	NONE

Reaction upon A:	NONE
Acknowl. upon A:	NONE
F31129 (N, A)	Encoder 1: Position difference, hall sensor/track C/D and A/B too large
Message value:	%1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	ENCODER (IASC/DCBRAKE, NONE)
Acknowledge:	PULSE INHIBIT
Cause:	The error for track C/D is greater than $\pm 15^\circ$ mechanical or $\pm 60^\circ$ electrical or the error for the Hall signals is greater than $\pm 60^\circ$ electrical. One period of track C/D corresponds to 360° mechanical. One period of the Hall signal corresponds to 360° electrical. The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough. After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A31429. Fault value (r0949, interpret decimal): For track C/D, the following applies: Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1°). For Hall signals, the following applies: Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1°). See also: p0491 (Motor encoder fault response ENCODER)
Remedy:	- track C or D not connected. - correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D. - check that the encoder cables are routed in compliance with EMC. - check the adjustment of the Hall sensor.
Reaction upon N:	NONE

F31130 (N, A)	Encoder 1: Zero mark and position error from the coarse synchronization
Message value:	Angular deviation, electrical: %1, angle, mechanical: %2
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out. When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical. When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex yyyy: Determined mechanical zero mark position (can only be used for track C/D). xxxx: Deviation of the zero mark from the expected position as electrical angle. Scaling: 32768 dec = 180 ° See also: p0491 (Motor encoder fault response ENCODER)
Remedy:	- Check p0431 and, if necessary, correct (trigger via p1990 = 1 if necessary). - check that the encoder cables are routed in compliance with EMC. - check the plug connections - if the Hall sensor is used as an equivalent for track C/D, check the connection. - Check the connection of track C or D. - replace the encoder or encoder cable
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F31131 (N, A)	Encoder 1: Deviation, position incremental/absolute too large
Message value:	%1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	ENCODER (IASC/DCBRAKE, NONE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	Absolute encoder: When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected. Limit value for the deviation: - EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants). - other encoders: 15 pulses = 60 quadrants. Incremental encoder: When the zero pulse is passed, a deviation in the incremental position was detected. For equidistant zero marks, the following applies: - The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark. For distance-coded zero marks, the following applies: - the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair. Fault value (r0949, interpret decimal): Deviation in quadrants (1 pulse = 4 quadrants). See also: p0491 (Motor encoder fault response ENCODER)

- Remedy:**
- check that the encoder cables are routed in compliance with EMC.
 - check the plug connections
 - replace the encoder or encoder cable
 - check whether the coding disk is dirty or there are strong ambient magnetic fields.
 - adapt the parameter for the clearance between zero marks (p0425).
 - if message output above speed threshold, reduce filter time if necessary (p0438).

A31400 (F, N) Encoder 1: Alarm threshold zero mark distance error

Message value: %1
Drive object: ENCODER, SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Alarm value (r2124, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.
Remedy: - check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable

Message value: %1

Drive object: ENCODER, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: For an HTL/TTL encoder, the speed difference between two sampling cycles has exceeded the value in p0492. The change to the averaged speed actual value - if applicable - is monitored in the current controller sampling time. Alarm value (r2124, interpret decimal): Only for internal Siemens troubleshooting. See also: p0492

Remedy:

- check the tachometer feeder cable for interruptions.
- check the grounding of the tachometer shielding.
- if required, increase the setting of p0492.

A31419 (F, N) Encoder 1: Track A or B outside the tolerance range

Message value: %1

Drive object: ENCODER, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The amplitude, phase or offset correction for track A or B is at the limit. Amplitude error correction: Amplitude B / Amplitude A = 0.78 ... 1.27
Phase: <84 degrees or >96 degrees
SMC20: Offset correction: +/-140 mV
SMC10: Offset correction: +/-650 mV
Alarm value (r2124, interpret hexadecimal):
xxxx1: Minimum of the offset correction, track B
xxxx2: Maximum of the offset correction, track B
xxx1x: Minimum of the offset correction, track A
xxx2x: Maximum of the offset correction, track A
xx1xx: Minimum of the amplitude correction, track B/A
xx2xx: Maximum of the amplitude correction, track B/A
x1xxx: Minimum of the phase error correction
x2xxx: Maximum of the phase error correction
1xxxx: Minimum of the cubic correction
2xxxx: Maximum of the cubic correction
See also: p0491 (Motor encoder fault response ENCODER)

Remedy:

- check mechanical mounting tolerances for encoders without their own bearings (e.g. toothed-wheel encoders).
- check the plug connections (also the transition resistance).
- check the encoder signals.
- replace the encoder or encoder cable

A31421 (F, N) Encoder 1: Coarse position error

Message value: %1

Drive object: ENCODER, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.

Alarm value (r2124, interpret decimal):

3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.

Remedy: Re alarm value = 3:

- for a standard encoder with cable, if required, contact the manufacturer.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

A31422 (F, N) Encoder 1: Pulses per revolution square-wave encoder outside tolerance bandwidth

Message value: %1

Drive object: ENCODER, SERVO, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance. This alarm is triggered with active square-wave encoder PPR correction and re-parameterized fault 31131 if the accumulator contains larger values than p4683 or p4684.

The zero mark distance for zero mark monitoring is set in p0425 (rotary encoder).

Alarm value (r2124, interpret decimal):

accumulated differential pulses in encoder pulses.

See also: p0491 (Motor encoder fault response ENCODER)

Remedy:

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- replace the encoder or encoder cable

Reaction upon F: NONE (ENCODER, IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Acknowl. upon F: IMMEDIATELY

Reaction upon N: NONE

Acknowl. upon N: NONE

A31429 (F, N)	Encoder 1: Position difference, hall sensor/track C/D and A/B too large
Message value:	%1
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The error for track C/D is greater than +/-15 ° mechanical or +/-60 ° electrical or the error for the Hall signals is greater than +/-60 ° electrical. One period of track C/D corresponds to 360 ° mechanical. One period of the Hall signal corresponds to 360 ° electrical. The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough. Alarm value (r2124, interpret decimal): For track C/D, the following applies: Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1 °). For Hall signals, the following applies: Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1 °). See also: p0491 (Motor encoder fault response ENCODER)
Remedy:	- track C or D not connected. - correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D. - check that the encoder cables are routed in compliance with EMC. - check the adjustment of the Hall sensor.

F31500 (N, A)	Encoder 1: Position tracking traversing range exceeded
Message value:	-
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions. For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421. For p0411.3 = 1, the maximum traversing range for the configured linear axis is preset (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).
Remedy:	The fault should be resolved as follows: - select encoder commissioning (p0010 = 4). - reset the position tracking as follows (p0411.2 = 1). - deselect encoder commissioning (p0010 = 0). The fault should then be acknowledged and the absolute encoder adjusted.
Reaction upon N:	NONE

Acknowl. upon A:	NONE
A31811 (F, N)	Encoder 1: Encoder serial number changed
Message value:	-
Drive object:	ENCODER, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The serial number of the motor encoder of a synchronous motor has changed. The change was only checked for encoders with serial number (e.g. EnDat encoders) and build-in motors (e.g. p0300 = 401) or third-party motors (p0300 = 2). Cause 1: The encoder was replaced. Cause 2: A third-party, build-in or linear motor was re-commissioned. Cause 3: The motor with integrated and adjusted encoder was replaced. Cause 4: The firmware was updated to a version that checks the encoder serial number.

Note:

With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2).

When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1).

Proceed as follows to hide serial number monitoring:

- set the following serial numbers for the corresponding Encoder Data Set: p0441= FF, p0442 = 0, p0443 = 0, p0444 = 0, p0445 = 0.

- parameterize F07414 as message type N (p2100, p2101).

See also: p0491 (Motor encoder fault response ENCODER)

Remedy:

Re causes 1, 2:

Carry out an automatic adjustment using the pole position identification routine. Acknowledge the fault. Initiate the pole position identification routine with p1990 = 1. Then check that the pole position identification routine is correctly executed.

SERVO:

If a pole position identification technique is selected in p1980, and if p0301 does not contain a motor type with an encoder adjusted in the factory, then p1990 is automatically activated.

or

Set the adjustment via p0431. In this case, the new serial number is automatically accepted.

or

Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.

Re causes 3, 4:

Accept the new serial number with p0440 = 1.

F31837 (N, A) Encoder 1 DRIVE-CLiQ: Component fault

Message value: Component number: %1, fault cause: %2

Drive object: ENCODER, SERVO, VECTOR

Reaction: ENCODER (IASC/DCBRAKE, NONE)

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 20 hex:
 Error in the telegram header.
 xx = 23 hex:
 Receive error: The telegram buffer memory contains an error.
 xx = 42 hex:
 Send error: The telegram buffer memory contains an error.
 xx = 43 hex:
 Send error: The telegram buffer memory contains an error.
 See also: p0491 (Motor encoder fault response ENCODER)

Remedy:

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F32100 (N, A)	Encoder 2: Zero mark distance error
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	The measured zero mark distance does not correspond to the parameterized zero mark distance. For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Fault value (r0949, interpret decimal): Last measured zero mark distance in increments (4 increments = 1 encoder pulse). The sign designates the direction of motion when detecting the zero mark distance.

Remedy:

- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable

F32103 (N, A) Encoder 2: Amplitude error, track R

Message value: R track: %1

Drive object: SERVO, VECTOR

Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 2.
The fault can be initiated when the unipolar voltage level is exceeded (RP/RN) or if the differential amplitude is under-shot.
Fault value (r0949, interpret hexadecimal):
xxxx hex:
xxxx = Signal level, track R (16 bits with sign).
The response thresholds of the unipolar signal levels of the encoder are between < 1400 mV and > 3500 mV.
The response threshold for the differential signal level of the encoder is < -1600 mV.
A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
The analog value of the amplitude error is not measured at the same time with the hardware fault output by the Sensor Module.
The fault value can only be represented between -32767dec and 32767dec (-770 mV ... 770 mV).
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).

- Remedy:**
- check the speed range; frequency characteristic (amplitude characteristic) of the measuring equipment might not be sufficient for the speed range
 - check that the encoder cables and shielding are routed in compliance with EMC.
 - check the plug connections and contacts of the encoder cable.
 - check whether the zero mark is connected and the signal cables RP and RN have been connected correctly
 - replace the encoder cable.
 - if the coding disk is soiled or the lighting aged, replace the encoder.

F32110 (N, A) Encoder 2: Serial communications error

Message value: Fault cause: %1 bin

Drive object: SERVO, VECTOR

Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: PULSE INHIBIT

Cause: Serial communication protocol transfer error between the encoder and evaluation module.

Fault value (r0949, interpret binary):

Bit 0: Alarm bit in the position protocol.

Bit 1: Incorrect quiescent level on the data line.

Bit 2: Encoder does not respond (does not supply a start bit within 50 ms).

Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data.

Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it.

Bit 5: Internal error in the serial driver: An illegal mode command was requested.

Bit 6: Timeout when cyclically reading.

Bit 8: Protocol is too long (e.g. > 64 bits).

Bit 9: Receive buffer overflow.

Bit 10: Frame error when reading twice.

Bit 11: Parity error.

Bit 12: Data line signal level error during the monoflop time.

Bit 13: Data line incorrect.

- Remedy:**
- Re fault value, bit 0 = 1:
- Enc defect F31111 may provide additional details.

Re fault value, bit 1 = 1:

- Incorrect encoder type / replace the encoder or encoder cable.

Re fault value, bit 2 = 1:

- Incorrect encoder type / replace the encoder or encoder cable.

Re fault value, bit 3 = 1:

- EMC / connect the cable shield, replace the encoder or encoder cable.

Re fault value, bit 4 = 1:

- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.

Re fault value, bit 5 = 1:

- EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module.

Re fault value, bit 6 = 1:

- Update Sensor Module firmware.

Re fault value, bit 8 = 1:

- Check parameterization (p0429.2).

Re fault value, bit 9 = 1:

 Fault value (r0949, interpret binary):
 Bit 0: Lighting system failed.
 Bit 1: Signal amplitude too low.
 Bit 2: Position value incorrect.
 Bit 3: Encoder power supply overvoltage condition.
 Bit 4: Encoder power supply undervoltage condition.
 Bit 5: Encoder power supply overcurrent condition.
 Bit 6: The battery must be changed.
Remedy: Re fault value, bit 0 = 1:
 Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
 Re fault value, bit 1 = 1:
 Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
 Re fault value, bit 2 = 1:
 Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
 Re fault value, bit 3 = 1:
 5 V power supply voltage fault.
 When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
 When a motor encoder with a direct DRIVE-CLiQ connection is used: Replace the motor.
 Re fault value, bit 4 = 1:
 5 V power supply voltage fault.
 When using an SMC: Check the plug-in cable between the encoder and SMC or replace the SMC.
 When using a motor with DRIVE-CLiQ: Replace the motor.
 Re fault value, bit 5 = 1:
 Encoder is defective. Replace the encoder, where the motor encoder has a direct DRIVE-CLiQ socket: Replace the motor.
 Re fault value, bit 6 = 1:
 The battery must be changed (only for encoders with battery back-up).

Reaction upon A: NONE
Acknowl. upon A: NONE

F32115 (N, A) Encoder 2: Amplitude error track A or B ($A^2 + B^2$)

Message value: A track: %1, B-track: %2
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The amplitude (root of $A^2 + B^2$) for encoder 2 exceeds the permissible tolerance.
 Fault value (r0949, interpret hexadecimal):
 yyyxxxxx hex:
 yyyy = Signal level, track B (16 bits with sign).
 xxxx = Signal level, track A (16 bits with sign).
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
 The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
 Note for sensors modules for resolvers (e. g. SMC10):
 The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV.
 A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.
 Note:
 The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
 - check the plug connections
 - replace the encoder or encoder cable
 - check the Sensor Module (e.g. contacts).
 The following applies to measuring systems without their own bearing system:
 - adjust the scanning head and check the bearing system of the measuring wheel.
 The following applies for measuring systems with their own bearing system:
 - ensure that the encoder housing is not subject to any axial force.

F32116 (N, A) Encoder 2: Amplitude error monitoring track A + B

Message value: Amplitude: %1, Angle: %2
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The amplitude of the rectified encoder signals A and B and the amplitude from the roots of $A^2 + B^2$ for encoder 2 are not within the tolerance bandwidth.
 Fault value (r0949, interpret hexadecimal):
 yyyxxxxx hex:
 yyyy = Signal level, track B (16 bits with sign).
 xxxx = Signal level, track A (16 bits with sign).
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
 The response thresholds are < 176 mV (observe the frequency response of the encoder) and > 955 mV.
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
 Note:
 The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

Remedy:

- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections
- replace the encoder or encoder cable
- check the Sensor Module (e.g. contacts).

F32117 (N, A) Encoder 2: Inversion error signals A and B and R

Message value: Fault cause: %1 bin

Drive object: SERVO, VECTOR

Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: For a square-wave encoder (bipolar, double ended) the A* and B* and R* signals are not inverted with respect to signals A and B and R.

Fault value (r0949, interpret binary):

Bits 0 - 15: Only for internal Siemens troubleshooting.

Bit 16: Error track A.

Bit 17: Error track B.

Bit 18: Error track R.

Note:

For SMC30 (order no.. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), CUA32, and CU310, the following applies:

A square-wave encoder without track R is used and track monitoring (p0405.2 = 1) is activated.

Remedy: Check the encoder/cable: Does the encoder provide signals and the associated inverted signals?

Note:

For SMC30 (order no. 6SL3055-0AA00-5CA0 and 6SL3055-0AA00-5CA1 only), the following applies:

- check the setting of p0405 (p0405.2 = 1 is only possible if the encoder is connected at X520).

For a square-wave encoder without track R, the following jumpers must be set for the connection at X520 (SMC30) or X23 (CUA32, CU310):

- pin 10 (reference signal R) <--> pin 7 (encoder power supply, ground)

- pin 11 (reference signal R inverted) <--> pin 4 (encoder power supply)

Acknowledge:	IMMEDIATELY
Cause:	Fault in internal reference voltage of ASICs for encoder 2. Fault value (r0949, interpret decimal): 1: Reference voltage error. 2: Internal undervoltage. 3: Internal overvoltage.
Remedy:	Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F32123 (N, A) Encoder 2: Signal level A/B unipolar outside tolerance

Message value: Fault cause: %1 bin
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The unipolar level (AP/AN or BP/BN) for encoder 2 is outside the permissible tolerance.
Fault value (r0949, interpret binary):
Bit 0 = 1: Either AP or AN outside the tolerance.
Bit 16 = 1: Either BP or BN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).
Remedy:
- make sure that the encoder cables and shielding are installed in an EMC-compliant manner.
- check the plug connections and contacts of the encoder cable.
- check the short-circuit of a signal cable with mass or the operating voltage.
- replace the encoder cable.

F32129 (N, A)	Encoder 2: Position difference, hall sensor/track C/D and A/B too large
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge:	PULSE INHIBIT
Cause:	The error for track C/D is greater than $\pm 15^\circ$ mechanical or $\pm 60^\circ$ electrical or the error for the Hall signals is greater than $\pm 60^\circ$ electrical. One period of track C/D corresponds to 360° mechanical. One period of the Hall signal corresponds to 360° electrical. The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough. After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A32429. Fault value (r0949, interpret decimal): For track C/D, the following applies: Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1°). For Hall signals, the following applies: Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1°).
Remedy:	- track C or D not connected. - correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D. - check that the encoder cables are routed in compliance with EMC. - check the adjustment of the Hall sensor.
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE

F32130 (N, A)	Encoder 2: Zero mark and position error from the coarse synchronization
Message value:	Angular deviation, electrical: %1, angle, mechanical: %2
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out. When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical. When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex yyyy: Determined mechanical zero mark position (can only be used for track C/D). xxxx: Deviation of the zero mark from the expected position as electrical angle. Scaling: 32768 dec = 180 °
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - if the Hall sensor is used as an equivalent for track C/D, check the connection. - Check the connection of track C or D. - replace the encoder or encoder cable
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE
Acknowl. upon A:	NONE

F32131 (N, A)	Encoder 2: Deviation, position incremental/absolute too large
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	Absolute encoder: When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected. Limit value for the deviation: - EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQI 1325 > 2 quadrants, EQN 1325 > 50 quadrants). - other encoders: 15 pulses = 60 quadrants. Incremental encoder: When the zero pulse is passed, a deviation in the incremental position was detected. For equidistant zero marks, the following applies: - The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark. For distance-coded zero marks, the following applies: - the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair. Fault value (r0949, interpret decimal): Deviation in quadrants (1 pulse = 4 quadrants).
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - replace the encoder or encoder cable - check whether the coding disk is dirty or there are strong ambient magnetic fields. - adapt the parameter for the clearance between zero marks (p0425). - if message output above speed threshold, reduce filter time if necessary (p0438).

A32400 (F, N)	Encoder 2: Alarm threshold zero mark distance error
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The measured zero mark distance does not correspond to the parameterized zero mark distance. For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Alarm value (r2124, interpret decimal): Last measured zero mark distance in increments (4 increments = 1 encoder pulse). The sign designates the direction of motion when detecting the zero mark distance.
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - check the encoder type (encoder with equidistant zero marks). - adapt the parameter for the distance between zero marks (p0424, p0425). - replace the encoder or encoder cable
Reaction upon F:	NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F:	IMMEDIATELY
Reaction upon N:	NONE
Acknowl. upon N:	NONE

A32401 (F, N)	Encoder 2: Alarm threshold zero marked failed
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The 1.5 x parameterized zero mark distance was exceeded. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Alarm value (r2124, interpret decimal): Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - check the encoder type (encoder with equidistant zero marks). - adapt the parameter for the clearance between zero marks (p0425). - replace the encoder or encoder cable

A32410 (F, N)	Encoder 2: Serial communications
Message value:	Fault cause: %1 bin
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Serial communication protocol transfer error between the encoder and evaluation module. Alarm value (r2124, interpret binary): Bit 0: Alarm bit in the position protocol. Bit 1: Incorrect quiescent level on the data line. Bit 2: Encoder does not respond (does not supply a start bit within 50 ms). Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data. Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it. Bit 5: Internal error in the serial driver: An illegal mode command was requested. Bit 6: Timeout when cyclically reading. Bit 8: Protocol is too long (e.g. > 64 bits). Bit 9: Receive buffer overflow. Bit 10: Frame error when reading twice. Bit 11: Parity error. Bit 12: Data line signal level error during the monoflop time.
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - replace the encoder.

A32414 (F, N) Encoder 2: Amplitude error track C or D ($C^2 + D^2$)

Message value: C track: %1, D track: %2
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The amplitude ($C^2 + D^2$) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.
 Alarm value (r2124, interpret hexadecimal):
 yyyyxxxx hex:
 yyyy = Signal level, track D (16 bits with sign).
 xxxx = Signal level, track C (16 bits with sign).
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
 The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
 If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.
Remedy:
 - check that the encoder cables are routed in compliance with EMC.
 - check the plug connections
 - replace the encoder or encoder cable
 - check the Sensor Module (e.g. contacts).
 - check the Hall sensor box
Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

N32415 (F, A)	Encoder 2: Amplitude alarm track A or B ($A^2 + B^2$)
Message value:	Amplitude: %1, Angle: %2
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The amplitude (root of $A^2 + B^2$) for encoder 2 exceeds the permissible tolerance. Alarm value (r2124, interpret hexadecimal): yyyyxxxx hex: yyyy = Angle xxxx = Amplitude, i.e. root from $A^2 + B^2$ (16 bits without sign) The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %). The response threshold is < 300 mV (observe the frequency response of the encoder). A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec. The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is at the negative zero crossover of track B. Note for sensors modules for resolvers (e. g. SMC10): The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is < 1414 mV (1.0 Vrms). A signal level of 2900 mV peak value corresponds to the numerical value 3333 hex = 13107 dec. Note: The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
Remedy:	- check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range. - check that the encoder cables and shielding are routed in compliance with EMC. - check the plug connections - replace the encoder or encoder cable - check the Sensor Module (e.g. contacts). - if the coding disk is soiled or the lighting aged, replace the encoder.
Reaction upon F:	NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

A32419 (F, N) Encoder 2: Track A or B outside the tolerance range

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The amplitude, phase or offset correction for track A or B is at the limit.
Amplitude error correction: Amplitude B / Amplitude A = 0.78 ... 1.27
Phase: <84 degrees or >96 degrees
SMC20: Offset correction: +/-140 mV
SMC10: Offset correction: +/-650 mV
Alarm value (r2124, interpret hexadecimal):
xxxx1: Minimum of the offset correction, track B
xxxx2: Maximum of the offset correction, track B
xxx1x: Minimum of the offset correction, track A
xxx2x: Maximum of the offset correction, track A
xx1xx: Minimum of the amplitude correction, track B/A
xx2xx: Maximum of the amplitude correction, track B/A
x1xxx: Minimum of the phase error correction
x2xxx: Maximum of the phase error correction
1xxxx: Minimum of the cubic correction
2xxxx: Maximum of the cubic correction
Remedy:
- check mechanical mounting tolerances for encoders without their own bearings (e.g. toothed-wheel encoders).
- check the plug connections (also the transition resistance).
- check the encoder signals.
- replace the encoder or encoder cable

A32421 (F, N) Encoder 2: Coarse position error

Message value: %1
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position.
Alarm value (r2124, interpret decimal):
3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.
Remedy:
Re alarm value = 3:
- for a standard encoder with cable, if required, contact the manufacturer.
- correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

F32500 (N, A) Encoder 2: Position tracking traversing range exceeded

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421.
For p0411.3 = 1, the maximum traversing range for the configured linear axis is preset (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).
Remedy: The fault should be resolved as follows:
- select encoder commissioning (p0010 = 4).
- reset the position tracking as follows (p0411.2 = 1).
- deselect encoder commissioning (p0010 = 0).
The fault should then be acknowledged and the absolute encoder adjusted.

Cause:	The encoder was not successfully initialized. Fault value (r0949, interpret hexadecimal): Bit 0,1: Encoder initialization with the motor rotating has failed (deviation involving coarse and fine position in encoder pulse/4) Bit 2: Mid-voltage matching for track A unsuccessful. Bit 3: Mid-voltage matching for track B unsuccessful. Bit 4: Mid-voltage matching for acceleration input (under development) unsuccessful. Bit 5: Mid-voltage matching for track safety A unsuccessful. Bit 6: Mid-voltage matching for track safety B unsuccessful. Bit 7: Mid-voltage matching for track C unsuccessful. Bit 8: Mid-voltage matching for track D unsuccessful. Bit 9: Mid-voltage matching for track R unsuccessful. Bit 10: The difference in mid-voltages between A and B is too great (> 0.5 V) Bit 11: The difference in mid-voltages between C and D is too great (> 0.5 V) Bit 12: The difference in mid-voltages between safety A and safety B is too great (> 0.5 V) Bit 13: The difference in mid-voltages between A and safety B is too great (> 0.5 V) Bit 14: The difference in mid-voltages between B and safety A is too great (> 0.5 V) Bit 15: The standard deviation of the calculated mid-voltages is too great (> 0.3 V) Bit 16: Internal fault - fault reading a register (CAFE) Bit 17: Internal fault - fault writing a register (CAFE)

Bit 18: Internal fault: No mid-voltage matching available
Bit 19: Internal error - ADC access error.
Bit 20: Internal error - no zero crossover found.
Bit 0,1 : Up to 6SL3055-0AA00-5*A0
Bits 2..20 : 6SL3055-0AA00-5*A1 and higher

Remedy: Acknowledge the fault.
If the fault cannot be acknowledged:
Bits 2 - 9: Check encoder power supply,
Bits 2 -14: Check the corresponding cable,
Bit 15 with no other bits: Check track R, check settings in p404.

F32811 (N, A) Encoder 2: Encoder serial number changed

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The encoder serial number has changed. The change is only checked for encoders with serial number (e.g. EnDat encoders).
Cause: The encoder was replaced.
Note: With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2).
When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1).
Proceed as follows to hide serial number monitoring:
- set the following serial numbers for the corresponding Encoder Data Set: p0441= FF, p0442 = 0, p0442 = 0, p0444 = 0, p0445 = 0.

Remedy: Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.

F32813 Encoder 2: Hardware logic unit failed

Message value: Fault cause: %1 bin
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The DRIVE-CLiQ encoder fault word supplies fault bits that have been set.
 Fault value (r0949, interpret binary):
 Bit 0: ALU watchdog has responded.
 Bit 1: ALU has detected a sign-of-life error.
Remedy: Replace encoder

F32820 (N, A) Encoder 2 DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Control Unit to the encoder involved.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 01 hex:
 CRC error.
 xx = 02 hex:
 Telegram is shorter than specified in the length byte or in the receive list.
 xx = 03 hex:
 Telegram is longer than specified in the length byte or in the receive list.
 xx = 04 hex:
 The length of the receive telegram does not match the receive list.
 xx = 05 hex:
 The type of the receive telegram does not match the receive list.
 xx = 06 hex:
 The address of the component in the telegram and in the receive list do not match.
 xx = 07 hex:
 A SYNC telegram is expected - but the received telegram is not a SYNC telegram.
 xx = 08 hex:
 No SYNC telegram is expected - but the received telegram is one.
 xx = 09 hex:
 The error bit in the receive telegram is set.
 xx = 10 hex:
 The receive telegram is too early.
Remedy:
 - carry out a POWER ON.
 - check the electrical cabinet design and cable routing for EMC compliance
 - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F32905 (N, A) Encoder 2: Parameterization error

Message value: Parameter: %1, supplementary information: %2

Drive object: SERVO, VECTOR

Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause:

A parameter of encoder 2 was detected as being incorrect.
It is possible that the parameterized encoder type does not match the connected encoder.
The parameter involved can be determined as follows:

- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).

Fault value (r0949, interpret decimal):
yyyyxxxx dec: yyyy = supplementary information, xxxx = parameter

Supplementary information = 0:
No information available.

Supplementary information = 1:
The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).

Supplementary information = 2:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please start a new encoder identification.

Supplementary information = 3:
A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
Please select a listed encoder in p0400 with a code number < 10000.

Supplementary information = 4:
This component does not support SSI encoders (p0404.9 = 1) without track A/B.

Supplementary information = 5:
For SQW encoder, value in p4686 greater than in p0425.

Supplementary information = 6:
DRIVE-CLiQ encoder cannot be used with this firmware version.

Supplementary information = 7:
For the SQW encoder, the Xact1 correction (p0437.2) is only permitted with equidistant zero marks.

Remedy:

- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number 314: Check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 * p0433) / p0432 <= 1000).

F33100 (N, A) Encoder 3: Zero mark distance error

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The measured zero mark distance does not correspond to the parameterized zero mark distance.
For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Fault value (r0949, interpret decimal):
Last measured zero mark distance in increments (4 increments = 1 encoder pulse).
The sign designates the direction of motion when detecting the zero mark distance.
Remedy:
- check that the encoder cables are routed in compliance with EMC.
- check the plug connections
- check the encoder type (encoder with equidistant zero marks).
- adapt the parameter for the distance between zero marks (p0424, p0425).
- if message output above speed threshold, reduce filter time if necessary (p0438).
- replace the encoder or encoder cable
Reaction upon N: NONE
Acknowl. upon N: NONE
Reaction upon A: NONE

F33101 (N, A) Encoder 3: Zero marked failed

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: The 1.5 x parameterized zero mark distance was exceeded.
The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder).
Fault value (r0949, interpret decimal):
Number of increments after POWER ON or since the last zero mark that was detected (4 increments = 1 encoder pulse).

- Remedy:**
- check that the encoder cables are routed in compliance with EMC.
 - check the plug connections
 - check the encoder type (encoder with equidistant zero marks).
 - adapt the parameter for the clearance between zero marks (p0425).
 - if message output above speed threshold, reduce filter time if necessary (p0438).
 - when p0437.1 is active, check p4686.
 - replace the encoder or encoder cable

F33103 (N, A) Encoder 3: Amplitude error, track R

- Message value:** R track: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: The amplitude of the reference track signal (track R) does not lie within the tolerance bandwidth for encoder 3. The fault can be initiated when the unipolar voltage level is exceeded (RP/RN) or if the differential amplitude is under-shot.
 Fault value (r0949, interpret hexadecimal):
 xxxx hex:
 xxxx = Signal level, track R (16 bits with sign).
 The response thresholds of the unipolar signal levels of the encoder are between < 1400 mV and > 3500 mV.
 The response threshold for the differential signal level of the encoder is < -1600 mV.
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
 The analog value of the amplitude error is not measured at the same time with the hardware fault output by the Sensor Module.
 The fault value can only be represented between -32767dec and 32767dec (-770 mV ... 770 mV).
 The signal level is not evaluated unless the following conditions are satisfied:
 - Sensor Module properties available (r0459.31 = 1).
 - Monitoring active (p0437.31 = 1).
Remedy:
- check the speed range; frequency characteristic (amplitude characteristic) of the measuring equipment might not be sufficient for the speed range
 - check that the encoder cables and shielding are routed in compliance with EMC.
 - check the plug connections and contacts of the encoder cable.
 - check whether the zero mark is connected and the signal cables RP and RN have been connected correctly
 - replace the encoder cable.
 - if the coding disk is soiled or the lighting aged, replace the encoder.

F33110 (N, A) Encoder 3: Serial communications error

Message value:	Fault cause: %1 bin
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge:	PULSE INHIBIT
Cause:	Serial communication protocol transfer error between the encoder and evaluation module. Fault value (r0949, interpret binary): Bit 0: Alarm bit in the position protocol. Bit 1: Incorrect quiescent level on the data line. Bit 2: Encoder does not respond (does not supply a start bit within 50 ms). Bit 3: CRC error: The checksum in the protocol from the encoder does not match the data. Bit 4: Encoder acknowledgement error: The encoder incorrectly understood the task (request) or cannot execute it. Bit 5: Internal error in the serial driver: An illegal mode command was requested. Bit 6: Timeout when cyclically reading. Bit 8: Protocol is too long (e.g. > 64 bits). Bit 9: Receive buffer overflow. Bit 10: Frame error when reading twice. Bit 11: Parity error. Bit 12: Data line signal level error during the monoflop time. Bit 13: Data line incorrect.
Remedy:	Re fault value, bit 0 = 1: - Enc defect F31111 may provide additional details. Re fault value, bit 1 = 1: - Incorrect encoder type / replace the encoder or encoder cable. Re fault value, bit 2 = 1: - Incorrect encoder type / replace the encoder or encoder cable. Re fault value, bit 3 = 1: - EMC / connect the cable shield, replace the encoder or encoder cable. Re fault value, bit 4 = 1: - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module. Re fault value, bit 5 = 1: - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module. Re fault value, bit 6 = 1: - Update Sensor Module firmware. Re fault value, bit 8 = 1: - Check parameterization (p0429.2). Re fault value, bit 9 = 1: - EMC / connect the cable shield, replace the encoder or encoder cable, replace the Sensor Module. Re fault value, bit 10 = 1: - Check parameterization (p0429.2, p0449). Re fault value, bit 11 = 1: - Check parameterization (p0436). Re fault value, bit 12 = 1: - Check parameterization (p0429.6). Re fault value, bit 13 = 1: - Check data line.

F33115 (N, A)	Encoder 3: Amplitude error track A or B ($A^2 + B^2$)
Message value:	A track: %1, B-track: %2
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge:	PULSE INHIBIT
Cause:	The amplitude (root of $A^2 + B^2$) for encoder 3 exceeds the permissible tolerance. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex: yyyy = Signal level, track B (16 bits with sign). xxxx = Signal level, track A (16 bits with sign). The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %). The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV. A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec. Note for sensors modules for resolvers (e. g. SMC10): The nominal signal level is at 2900 mV (2.0 Vrms). The response thresholds are < 1070 mV and > 3582 mV. A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec. Note: The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
Remedy:	- check that the encoder cables and shielding are routed in compliance with EMC. - check the plug connections - replace the encoder or encoder cable - check the Sensor Module (e.g. contacts). The following applies to measuring systems without their own bearing system: - adjust the scanning head and check the bearing system of the measuring wheel. The following applies for measuring systems with their own bearing system: - ensure that the encoder housing is not subject to any axial force.

Cause:	Fault in internal reference voltage of ASICs for encoder 3. Fault value (r0949, interpret decimal): 1: Reference voltage error. 2: Internal undervoltage. 3: Internal overvoltage.
Remedy:	Replace the motor with DRIVE-CLiQ or the appropriate Sensor Module.

F33123 (N, A) Encoder 3: Signal level A/B unipolar outside tolerance

Message value: Fault cause: %1 bin

Drive object: SERVO, VECTOR

Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: The unipolar level (AP/AN or BP/BN) for encoder 3 is outside the permissible tolerance.
 Fault value (r0949, interpret binary):
 Bit 0 = 1: Either AP or AN outside the tolerance.
 Bit 16 = 1: Either BP or BN outside the tolerance.
 The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
 The response thresholds are < 1700 mV and > 3300 mV.
 Note:
 The signal level is not evaluated unless the following conditions are satisfied:
 - Sensor Module properties available (r0459.31 = 1).
 - Monitoring active (p0437.31 = 1).

Remedy: - make sure that the encoder cables and shielding are installed in an EMC-compliant manner.
 - check the plug connections and contacts of the encoder cable.
 - check the short-circuit of a signal cable with mass or the operating voltage.
 - replace the encoder cable.

Message value: A track: %1, B-track: %2

Drive object: SERVO, VECTOR

Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: PULSE INHIBIT

Cause: The amplitude of track A or B for encoder 3 exceeds the permissible tolerance band.
 Fault value (r0949, interpret hexadecimal):
 yyyxxxx hex:
 yyyy = Signal level, track B (16 bits with sign).
 xxxx = Signal level, track A (16 bits with sign).
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
 The response threshold is > 750 mV. This fault also occurs if the A/D converter is overcontrolled.
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
 Note for sensors modules for resolvers (e. g. SMC10):
 The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is > 3582 mV.
 A signal level of 2900 mV peak value corresponds to the numerical value 6666 hex = 26214 dec.
 Note:
 The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.

Remedy: - check that the encoder cables and shielding are routed in compliance with EMC.
 - replace the encoder or encoder cable

F33129 (N, A)	Encoder 3: Position difference, hall sensor/track C/D and A/B too large
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge:	PULSE INHIBIT
Cause:	The error for track C/D is greater than $\pm 15^\circ$ mechanical or $\pm 60^\circ$ electrical or the error for the Hall signals is greater than $\pm 60^\circ$ electrical. One period of track C/D corresponds to 360° mechanical. One period of the Hall signal corresponds to 360° electrical. The monitoring responds if, for example, Hall sensors are connected as equivalent for the C/D tracks with the incorrect rotational sense or supply values that are not accurate enough. After the fine synchronization using one reference mark or 2 reference marks for distance-coded encoders, this fault is no longer initiated, but instead, Alarm A33429. Fault value (r0949, interpret decimal): For track C/D, the following applies: Measured deviation as mechanical angle (16 bits with sign, 182 dec corresponds to 1°). For Hall signals, the following applies: Measured deviation as electrical angle (16 bits with sign, 182 dec corresponds to 1°).
Remedy:	- track C or D not connected. - correct the direction of rotation of the Hall sensor possibly connected as equivalent for track C/D. - check that the encoder cables are routed in compliance with EMC. - check the adjustment of the Hall sensor.
Reaction upon N:	NONE

F33130 (N, A)	Encoder 3: Zero mark and position error from the coarse synchronization
Message value:	Angular deviation, electrical: %1, angle, mechanical: %2
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	After initializing the pole position using track C/D, Hall signals or pole position identification routine, the zero mark was detected outside the permissible range. For distance-coded encoders, the test is carried out after passing 2 zero marks. Fine synchronization was not carried out. When initializing via track C/D (p0404) then it is checked whether the zero mark occurs in an angular range of +/-18 ° mechanical. When initializing via Hall sensors (p0404) or pole position identification (p1982) it is checked whether the zero mark occurs in an angular range of +/-60 ° electrical. Fault value (r0949, interpret hexadecimal): yyyyxxxx hex yyyy: Determined mechanical zero mark position (can only be used for track C/D). xxxx: Deviation of the zero mark from the expected position as electrical angle. Scaling: 32768 dec = 180 °
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - if the Hall sensor is used as an equivalent for track C/D, check the connection. - Check the connection of track C or D. - replace the encoder or encoder cable
Reaction upon N:	NONE
Acknowl. upon N:	NONE
Reaction upon A:	NONE

F33131 (N, A)	Encoder 3: Deviation, position incremental/absolute too large
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	PULSE INHIBIT
Cause:	Absolute encoder: When cyclically reading the absolute position, an excessively high difference to the incremental position was detected. The absolute position that was read is rejected. Limit value for the deviation: - EnDat encoder: Is supplied from the encoder and is a minimum of 2 quadrants (e.g. EQ1 1325 > 2 quadrants, EQN 1325 > 50 quadrants). - other encoders: 15 pulses = 60 quadrants. Incremental encoder: When the zero pulse is passed, a deviation in the incremental position was detected. For equidistant zero marks, the following applies: - The first zero mark passed supplies the reference point for all subsequent checks. The other zero marks must have n times the distance referred to the first zero mark. For distance-coded zero marks, the following applies: - the first zero mark pair supplies the reference point for all subsequent checks. The other zero mark pairs must have the expected distance to the first zero mark pair. Fault value (r0949, interpret decimal): Deviation in quadrants (1 pulse = 4 quadrants).
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - replace the encoder or encoder cable - check whether the coding disk is dirty or there are strong ambient magnetic fields. - adapt the parameter for the clearance between zero marks (p0425). - if message output above speed threshold, reduce filter time if necessary (p0438).

 Bit 31: Multiturn battery (reserved)

Remedy: Replace DRIVE-CLiQ encoder.

F33137 Encoder 3: Internal error when determining the position

Message value: Fault cause: %1 bin
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The DRIVE-CLiQ encoder fault word supplies fault bits that have been set.
 Fault value (r0949, interpret binary):
 Only for internal SIEMENS use.
Remedy: Replace encoder

F33138 Encoder 3: Internal error when determining multiturn information

Message value: Fault cause: %1 bin
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The DRIVE-CLiQ encoder fault word supplies fault bits that have been set.
 Fault value (r0949, interpret binary):
 Only for internal SIEMENS use.
Remedy: Replace encoder

F33150 (N, A) Encoder 3: Initialization error

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: PULSE INHIBIT
Cause: Encoder functionality selected in p0404 is not operating correctly.
 Fault value (r0949, interpret hexadecimal):
 The fault value is a bit field. Every set bit indicates functionality that is faulted.
 The bit assignment corresponds to that of p0404 (e.g. bit 5 set: Error track C/D).
Remedy:
 - Check that p0404 is correctly set.
 - check the encoder type used (incremental/absolute value) and for SMCxx, the encoder cable.
 - if relevant, note additional fault messages that describe the fault in detail.

A33400 (F, N)	Encoder 3: Alarm threshold zero mark distance error
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The measured zero mark distance does not correspond to the parameterized zero mark distance. For distance-coded encoders, the zero mark distance is determined from zero marks detected pairs. This means that if a zero mark is missing, depending on the pair generation, this cannot result in a fault and also has no effect in the system. The zero mark distance for the zero mark monitoring is set in p0425 (rotary encoder) or p0424 (linear encoder). Alarm value (r2124, interpret decimal): Last measured zero mark distance in increments (4 increments = 1 encoder pulse). The sign designates the direction of motion when detecting the zero mark distance.
Remedy:	- check that the encoder cables are routed in compliance with EMC. - check the plug connections - check the encoder type (encoder with equidistant zero marks). - adapt the parameter for the distance between zero marks (p0424, p0425). - replace the encoder or encoder cable
Reaction upon F:	NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F:	IMMEDIATELY

A33414 (F, N) Encoder 3: Amplitude error track C or D ($C^2 + D^2$)

Message value: C track: %1, D track: %2
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The amplitude ($C^2 + D^2$) of track C or D of the encoder or from the Hall signals, is not within the tolerance bandwidth.
 Alarm value (r2124, interpret hexadecimal):
 yyyyxxxx hex:
 yyyy = Signal level, track D (16 bits with sign).
 xxxx = Signal level, track C (16 bits with sign).
 The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %).
 The response thresholds are < 230 mV (observe the frequency response of the encoder) and > 750 mV.
 A signal level of 500 mV peak value corresponds to the numerical value 5333 hex = 21299 dec.
Note:
 If the amplitude is not within the tolerance bandwidth, then it cannot be used to initialize the start position.
Remedy:
 - check that the encoder cables are routed in compliance with EMC.
 - check the plug connections
 - replace the encoder or encoder cable
 - check the Sensor Module (e.g. contacts).
 - check the Hall sensor box

N33415 (F, A)	Encoder 3: Amplitude alarm track A or B ($A^2 + B^2$)
Message value:	Amplitude: %1, Angle: %2
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The amplitude (root of $A^2 + B^2$) for encoder 3 exceeds the permissible tolerance. Alarm value (r2124, interpret hexadecimal): yyyyxxxx hex: yyyy = Angle xxxx = Amplitude, i.e. root from $A^2 + B^2$ (16 bits without sign) The nominal signal level of the encoder must lie in the range 375 mV to 600 mV (500 mV -25/+20 %). The response threshold is < 300 mV (observe the frequency response of the encoder). A signal level of 500 mV peak value corresponds to the numerical value 299A hex = 10650 dec. The angle 0 ... FFFF hex corresponds to 0 ... 360 degrees of the fine position. Zero degrees is at the negative zero crossover of track B. Note for sensors modules for resolvers (e. g. SMC10): The nominal signal level is at 2900 mV (2.0 Vrms). The response threshold is < 1414 mV (1.0 Vrms). A signal level of 2900 mV peak value corresponds to the numerical value 3333 hex = 13107 dec. Note: The analog values of the amplitude error are not measured at the same time with the hardware fault output by the Sensor Module.
Remedy:	- check the speed range, frequency characteristic (amplitude characteristic) of the measuring equipment is not sufficient for the speed range. - check that the encoder cables and shielding are routed in compliance with EMC. - check the plug connections - replace the encoder or encoder cable - check the Sensor Module (e.g. contacts). - if the coding disk is soiled or the lighting aged, replace the encoder.

A33421 (F, N)	Encoder 3: Coarse position error
Message value:	%1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	For the actual value sensing, an error was detected. As a result of this error, it must be assumed that the actual value sensing supplies an incorrect coarse position. Alarm value (r2124, interpret decimal): 3: The absolute position of the serial protocol and track A/B differ by half an encoder pulse. The absolute position must have its zero position in the quadrants in which both tracks are negative. In the case of a fault, the position can be incorrect by one encoder pulse.
Remedy:	Re alarm value = 3: - for a standard encoder with cable, if required, contact the manufacturer. - correct the assignment of the tracks to the position value that is serially transferred. To do this, the two tracks must be connected, inverted, at the Sensor Module (interchange A with A* and B with B*) or, for a programmable encoder, check the zero offset of the position.

A33443 (F, N) Encoder 3: Unipolar CD signal level outside specification

Message value: Fault cause: %1 bin
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The unipolar level (CP/CN or DP/DN) for encoder 3 is outside the permissible tolerance.
Alarm value (r2124, interpret binary):
Bit 0 = 1: Either CP or CN outside the tolerance.
Bit 16 = 1: Either DP or DN outside the tolerance.
The unipolar nominal signal level of the encoder must lie in the range 2500 mV +/- 500 mV.
The response thresholds are < 1700 mV and > 3300 mV.
Note:
The signal level is not evaluated unless the following conditions are satisfied:
- Sensor Module properties available (r0459.31 = 1).
- Monitoring active (p0437.31 = 1).
Remedy:
- check that the encoder cables and shielding are routed in compliance with EMC.
- check the plug connections and contacts of the encoder cable.
- are the C/D tracks connected correctly (have the signal lines CP and CN or DP and DN been interchanged)?
- replace the encoder cable.

F33500 (N, A) Encoder 3: Position tracking traversing range exceeded

Message value: -

Drive object: SERVO, VECTOR

Reaction: OFF1 (NONE, OFF2, OFF3)

Acknowledge: IMMEDIATELY

Cause: For a configured linear axis without modulo correction, the drive/encoder has exceeded the maximum possible traversing range. The value should be read in p0412 and interpreted as the number of motor revolutions.
 For p0411.0 = 1, the maximum traversing range for the configured linear axis is defined to be 64x (+/- 32x) of p0421.
 For p0411.3 = 1, the maximum traversing range for the configured linear axis is preset (default value) to the highest possible value and is +/-p0412/2 (rounded off to complete revolutions). The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

Remedy: The fault should be resolved as follows:
 - select encoder commissioning (p0010 = 4).
 - reset the position tracking as follows (p0411.2 = 1).
 - deselect encoder commissioning (p0010 = 0).
 The fault should then be acknowledged and the absolute encoder adjusted.

F33503 (N, A)	Encoder 3: Position tracking cannot be reset
Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The position tracking for the measuring gear cannot be reset.
Remedy:	The fault should be resolved as follows: - select encoder commissioning (p0010 = 4). - reset the position tracking as follows (p0411.2 = 1). - deselect encoder commissioning (p0010 = 0). The fault should then be acknowledged and the absolute encoder adjusted.

A33700 Encoder 3: Effectivity test does not supply the expected value

Message value: Fault cause: %1 bin
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The DRIVE-CLiQ encoder fault word supplies fault bits that have been set.
 Fault value (r0949, interpret binary):
 Bit x = 1: Effectivity test x unsuccessful.

Remedy:

N33800 (F) Encoder 3: Group signal

Message value: -
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: NONE
Cause: The motor encoder has detected at least one fault.
Remedy: Evaluates other actual messages.
 Reaction upon F: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
 Acknowl. upon F: IMMEDIATELY

F33801 (N, A) Encoder 3 DRIVE-CLiQ: Sign-of-life missing

Message value: Component number: %1, fault cause: %2
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Control Unit to the encoder involved.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 0A hex:
 The sign-of-life bit in the receive telegram is not set.
Remedy: - check the electrical cabinet design and cable routing for EMC compliance
 - replace the component involved.

Message value: %1
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3)
Acknowledge: PULSE INHIBIT
Cause: The encoder was not successfully initialized.
Fault value (r0949, interpret hexadecimal):
Bit 0,1: Encoder initialization with the motor rotating has failed (deviation involving coarse and fine position in encoder pulse/4)
Bit 2: Mid-voltage matching for track A unsuccessful.
Bit 3: Mid-voltage matching for track B unsuccessful.
Bit 4: Mid-voltage matching for acceleration input (under development) unsuccessful.
Bit 5: Mid-voltage matching for track safety A unsuccessful.
Bit 6: Mid-voltage matching for track safety B unsuccessful.
Bit 7: Mid-voltage matching for track C unsuccessful.
Bit 8: Mid-voltage matching for track D unsuccessful.
Bit 9: Mid-voltage matching for track R unsuccessful.
Bit 10: The difference in mid-voltages between A and B is too great (> 0.5 V)
Bit 11: The difference in mid-voltages between C and D is too great (> 0.5 V)
Bit 12: The difference in mid-voltages between safety A and safety B is too great (> 0.5 V)
Bit 13: The difference in mid-voltages between A and safety B is too great (> 0.5 V)
Bit 14: The difference in mid-voltages between B and safety A is too great (> 0.5 V)
Bit 15: The standard deviation of the calculated mid-voltages is too great (> 0.3 V)

	Bit 16: Internal fault - fault reading a register (CAFE)
	Bit 17: Internal fault - fault writing a register (CAFE)
	Bit 18: Internal fault: No mid-voltage matching available
	Bit 19: Internal error - ADC access error.
	Bit 20: Internal error - no zero crossover found.
	Bit 0,1 : Up to 6SL3055-0AA00-5*A0
	Bits 2..20 : 6SL3055-0AA00-5*A1 and higher
Remedy:	Acknowledge the fault. If the fault cannot be acknowledged: Bits 2 - 9: Check encoder power supply, Bits 2 -14: Check the corresponding cable, Bit 15 with no other bits: Check track R, check settings in p404.

F33811 (N, A) Encoder 3: Encoder serial number changed

Message value:	-
Drive object:	SERVO, VECTOR
Reaction:	OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY
Cause:	The encoder serial number has changed. The change is only checked for encoders with serial number (e.g. EnDat encoders). Cause: The encoder was replaced. Note: With closed-loop position control, the serial number is accepted when starting the adjustment (p2507 = 2). When the encoder is adjusted (p2507 = 3), the serial number is checked for changes and if required, the adjustment is reset (p2507 = 1). Proceed as follows to hide serial number monitoring: - set the following serial numbers for the corresponding Encoder Data Set: p0441= FF, p0442 = 0, p0442 = 0, p0444 = 0, p0445 = 0.
Remedy:	Mechanically adjust the encoder. Accept the new serial number with p0440 = 1.

F33905 (N, A) Encoder 3: Parameterization error

Message value: Parameter: %1, supplementary information: %2

Drive object: SERVO, VECTOR

Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY

Cause:

A parameter of encoder 3 was detected as being incorrect.
 It is possible that the parameterized encoder type does not match the connected encoder.
 The parameter involved can be determined as follows:

- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).

Fault value (r0949, interpret decimal):
 yyyyxxxx dec: yyyy = supplementary information, xxxx = parameter

Supplementary information = 0:
 No information available.

Supplementary information = 1:
 The component does not support HTL level (p0405.1 = 0) combined with track monitoring A/B <> -A/B (p0405.2 = 1).

Supplementary information = 2:
 A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
 Please start a new encoder identification.

Supplementary information = 3:
 A code number for an identified encoder has been entered into p0400, however, no identification was carried out.
 Please select a listed encoder in p0400 with a code number < 10000.

Supplementary information = 4:
 This component does not support SSI encoders (p0404.9 = 1) without track A/B.

Supplementary information = 5:
 For SQW encoder, value in p4686 greater than in p0425.

Supplementary information = 6:
 DRIVE-CLiQ encoder cannot be used with this firmware version.

Supplementary information = 7:
 For the SQW encoder, the Xact1 correction (p0437.2) is only permitted with equidistant zero marks.

Remedy:

- check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.
- re parameter number 314: Check the pole pair number and measuring gear ratio. The quotient of the "pole pair number" divided by the "measuring gear ratio" must be less than or equal to 1000 ((r0313 * p0433) / p0432 <= 1000).

Message value: Parameter: %1, supplementary information: %2
Drive object: SERVO, VECTOR
Reaction: OFF1 (IASC/DCBRAKE, NONE, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY
Cause: A parameter of encoder 3 was detected as being incorrect.
It is possible that the parameterized encoder type does not match the connected encoder.
The parameter involved can be determined as follows:
- determine the parameter number using the fault value (r0949).
- determine the parameter index (p0187).
Fault value (r0949, interpret decimal):
Parameter number.
Note:
This fault is only output for encoders where r0404.10 = 1 or r0404.11 = 1. It corresponds to A33905 with encoders where r0404.10 = 0 and r0404.11 = 0.
Remedy: - check whether the connected encoder type matches the encoder that has been parameterized.
- correct the parameter specified by the fault value (r0949) and p0187.

A33920 (F, N) Encoder 3: Temperature sensor fault

Message value: Fault cause: %1, channel number: %2
Drive object: SERVO, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: When evaluating the temperature sensor, an error occurred.
Alarm value (r2124, interpret decimal):
Low word low byte: Cause:
1: Wire breakage or sensor not connected (KTY: R > 1630 Ohm).
2: Measured resistance too low (PTC: R < 20 Ohm, KTY: R < 50 Ohm).
Additional values:
Only for internal Siemens troubleshooting.
Low word high byte: Channel number.
Remedy: - check that the encoder cable is the correct type and is correctly connected.
- check the temperature sensor selection in p0600 to p0603.
- replace the Sensor Module (hardware defect or incorrect calibration data).
Reaction upon F: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowl. upon F: IMMEDIATELY
Reaction upon N: NONE
Acknowl. upon N: NONE

A33999 (F, N)	Encoder 3: Unknown alarm
Message value:	New message: %1
Drive object:	SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	A alarm has occurred on the Sensor Module for encoder 3 that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit. Alarm value (r2124, interpret decimal): Alarm number. Note: If required, the significance of this new alarm can be read about in a more recent description of the Control Unit.
Remedy:	- replace the firmware on the Sensor Module by an older firmware version (r0148). - upgrade the firmware on the Control Unit (r0018).
Reaction upon F:	NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)

Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module (VSM).
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0A hex:
The sign-of-life bit in the receive telegram is not set.
Remedy: - check the DRIVE-CLiQ connection.
- replace the Voltage Sensing Module (VSM).

F34801 VSM DRIVE-CLiQ: Sign-of-life missing

Message value: Component number: %1, fault cause: %2
Drive object: VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module (VSM).
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 0A hex:
The sign-of-life bit in the receive telegram is not set.
Remedy: - check the DRIVE-CLiQ connection.
- replace the Terminal Module.

F34802 VSM: Time slice overflow

Message value: -
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: Time slice overflow on the Voltage Sensing Module.
Remedy: Replace the Voltage Sensing Module.

F34803 VSM: Memory test

Message value: -
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: An error has occurred during the memory test on the Voltage Sensing Module.
Remedy: - check whether the permissible ambient temperature for the Voltage Sensing Module is being maintained.
- replace the Voltage Sensing Module.

F34804 VSM: CRC

Message value: %1
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: A checksum error has occurred when reading-out the program memory on the Voltage Sensing Module (VSM).
Remedy: - check whether the permissible ambient temperature for the component is maintained.
- replace the Voltage Sensing Module.

F34805 VSM: EPROM checksum error

Message value: %1
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: Internal parameter data is corrupted.
Fault value (r0949, interpret hexadecimal):
01: EEPROM access error.
02: Too many blocks in the EEPROM.
Remedy: - check whether the permissible ambient temperature for the component is maintained.
- replace the Voltage Sensing Module (VSM).

F34806 VSM: Initialization

Message value: -
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowledge: IMMEDIATELY
Cause: For the Voltage Sensing Module (VSM), a fault has occurred while initializing.
Remedy: Replace the Voltage Sensing Module.

A34807 (F, N) VSM: Sequence control time monitoring

Message value: -
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Error, timeout in the sequence control on the Voltage Sensing Module (VSM).
Remedy: Replace the Voltage Sensing Module.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY (POWER ON)
Reaction upon N: NONE
Acknowl. upon N: NONE

F34820 VSM DRIVE-CLiQ: Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 01 hex:
CRC error.
xx = 02 hex:
Telegram is shorter than specified in the length byte or in the receive list.
xx = 03 hex:
Telegram is longer than specified in the length byte or in the receive list.
xx = 04 hex:
The length of the receive telegram does not match the receive list.
xx = 05 hex:
The type of the receive telegram does not match the receive list.
xx = 06 hex:
The address of the component in the telegram and in the receive list do not match.
xx = 07 hex:
A SYNC telegram is expected - but the received telegram is not a SYNC telegram.
xx = 08 hex:
No SYNC telegram is expected - but the received telegram is one.
xx = 09 hex:
The error bit in the receive telegram is set.
xx = 10 hex:
The receive telegram is too early.
Remedy: - carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F34835 VSM DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, S_INF, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
Vector: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module. The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 21 hex:
The cyclic telegram has not been received.
xx = 22 hex:
Timeout in the telegram receive list.
xx = 40 hex:
Timeout in the telegram send list.
Remedy: - carry out a POWER ON.
- replace the component involved.

F34836	VSM DRIVE-CLiQ: Send error for DRIVE-CLiQ data
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communications error has occurred from the Control Unit to the Voltage Sensing Module. Data were not able to be sent. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 41 hex: Telegram type does not match send list.
Remedy:	Carry out a POWER ON.
F34837	VSM DRIVE-CLiQ: Component fault
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 20 hex: Error in the telegram header. xx = 23 hex: Receive error: The telegram buffer memory contains an error. xx = 42 hex: Send error: The telegram buffer memory contains an error. xx = 43 hex: Send error: The telegram buffer memory contains an error.
Remedy:	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.
F34845	VSM DRIVE-CLiQ: Cyclic data transfer error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Vector: NONE (OFF1, OFF2)

F34886 VSM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: Infeed: OFF2 (NONE, OFF1)
 Servo: NONE (OFF1, OFF2)
 Vector: NONE (OFF1, OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module (VSM) to the Control Unit.
 Data were not able to be sent.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 41 hex:
 Telegram type does not match send list.

Remedy:

- Carry out a POWER ON.

F34887	VSM DRIVE-CLiQ (CU): Component fault
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Servo: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	Fault detected on the DRIVE-CLiQ component (Voltage Sensing Module) involved. Faulty hardware cannot be excluded. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 20 hex: Error in the telegram header. xx = 23 hex: Receive error: The telegram buffer memory contains an error. xx = 42 hex: Send error: The telegram buffer memory contains an error. xx = 43 hex: Send error: The telegram buffer memory contains an error. xx = 60 hex: Response received too late during runtime measurement. xx = 61 hex: Time taken to exchange characteristic data too long.
Remedy:	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.

F34895	VSM DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Servo: NONE (OFF1, OFF2) Vector: NONE (OFF1, OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communications error has occurred from the Voltage Sensing Module (VSM) to the Control Unit. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0B hex: Synchronization error during alternating cyclic data transfer.
Remedy:	Carry out a POWER ON. See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F34896	VSM DRIVE-CLiQ (CU): Inconsistent component properties
Message value:	Component number: %1
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Servo: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The properties of the DRIVE-CLiQ component (Voltage Sensing Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced. Fault value (r0949, interpret decimal): Component number.

Remedy:

- carry out a POWER ON.
- when a component is replaced, the same component type and if possible the same firmware version should be used.
- when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F34897 VSM DRIVE-CLiQ (CU): no communication with component

Message value: Preliminary component number: %1

Drive object: VECTOR

Reaction: OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: Communication with the DRIVE-CLiQ component (Voltage Sensing Module) specified by the fault value is not possible.
One cause may, for example, be that a DRIVE-CLiQ cable has been withdrawn.
Fault value (r0949, interpret decimal):
Component ID.

Remedy:

- check the DRIVE-CLiQ connections.
- carry out a POWER ON.

F34899 (N, A) VSM: Unknown fault

Message value: New message: %1

Drive object: A_INF, B_INF, S_INF, VECTOR

Reaction: Infeed: NONE (OFF1, OFF2)
Vector: NONE (OFF1, OFF2, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: A fault occurred on the Voltage Sensing Module that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Fault value (r0949, interpret decimal):
Fault number.
Note:
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.

Remedy:

- replace the firmware on the Voltage Sensing Module by an older firmware version (r0158).
- upgrade the firmware on the Control Unit (r0018).

F35001	TM54F: Parameter value invalid
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The entered value is invalid. Fault value (r0949, interpret decimal): Parameter number with the invalid value.
Remedy:	Correct the parameter value.
F35002	TM54F: Commissioning not possible
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The commissioning mode setting was rejected because for at least one drive belonging to the TM54F, the pulses had not been suppressed. Fault value (r0949, interpret decimal): Drive object number of the first drive found without pulse suppression.
Remedy:	Cancel the pulses for the drive specified in the fault value.

F35003	TM54F: Acknowledgement on the Control Unit is required
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A fault on the Terminal Module 54F (TM54) was acknowledged using the safe acknowledgement (P10006). An additional acknowledgement is also required at the Control Unit.
Remedy:	Acknowledge the fault at the Control Unit.

F35011	TM54F: Drive object number assignment illegal
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	A drive object number was assigned twice. Each drive object number can be assigned only once.
Remedy:	Correct the assignment of the drive object numbers. See also: p10010 (SI drive object assignment)

A35012	TM54F: Test stop active
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The test stop for the Terminal Module 54F (TM54F) is presently being executed. F35013 is output when a error occurs during the test stop.
Remedy:	The alarm disappears automatically after successfully ending or canceling (when a fault condition occurs) the test stop.

F35013	TM54F: Test stop error
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	An error was detected when carrying out the test stop on the TM54F. As fault response fail-safe input terminal signals are transferred to the motion monitoring functions. Fault value 0xaaaabbcc hex (r0949, interpret hexadecimal): aaaa: Specifies the DOs or F-DIs (dependent on test step cc) for which the expected state was not assumed. The number is bit-coded (bit 0 = F-DI 0 or F-DO 0; bit 3 = F-DI 3 or F-DO 3). bb: Describes the cause of the fault 0x01 = Internal error (error state on the opposite side). 0x02 = Fault during comparison of switching signals: FDIs or DIs 0x03 = Internal error (delay time in the new state has still not expired). 0x04 = Fault during comparison of switching signals: DiagDOs cc: Describes the test step of the test stop in which the fault occurred

The information below is displayed in the following format:

Test stop step slave : (test actions)(test actions) | Step Master : (test actions)(test actions)

| Description

List of test stop steps:

0x00:(L1+OFF)(L2+ON) | 0x0A:(=)(=) | Synchronization / Switching step

0x0A:(L1+OFF)(L2+ON) | 0x15:(=)(=) | Wait step

0x15:(L1+OFF)(L2+OFF) | 0x20:(=) (=) | FDIs 0..4 Test for 0 V / Switching step

0x20:(L1+OFF)(L2+OFF) | 0x2B:(=) (=) | Wait step

0x2B:(L1+ON)(L2+ON) | 0x36:(=) (=) | FDIs 5..9 Test for 0 V / Switching step

0x36:(DO OFF)() | 0x41:(DO OFF)() | Wait step / Switching step

0x41:(DO OFF)() | 0x4C:(DO OFF)() | Wait step

0x4C:(DO ON)() | 0x57:(DO ON)() | Test DiagDOs or DiagDI / Switching step

0x57:(DO ON)() | 0x62:(DO ON)() | Wait step

0x62:(DO OFF)() | 0x6D:(DO ON)() | Test DiagDOs or DiagDI / Switching step

0x6D:(DO OFF)() | 0x78:(DO ON)() | Wait step

0x78:(DO ON)() | 0x83:(DO OFF)() | Test DiagDOs or DiagDI / Switching step

0x83:(DO ON)() | 0x8E:(DO OFF)() | Wait step

0x8E:(DO OFF)() | 0x99:(DO OFF)() | Test DiagDOs or DiagDI / Switching step

0x99:(DO OFF)() | 0xA4:(DO OFF)() | Wait step

0xA4:(DO OFF)() | 0xAF:(DO OFF)() | Test DiagDOs or DiagDI

0xAF:(DO original state)() | 0xC5:(DO original state)() | Switching step

0xC5: End of test

The following expected states are tested in the test steps when testing the FDOs:

The information below is displayed in the following format:

Test step (SL MA): Expected DiagDO mode 1 | Expected DI20..23 mode 2 | Expected DI20..23 mode 3

(0x4C 0x57): DiagDO=0V | DI=24V | DI=24V

(0x62 0x6D): DiagDO=0V | DI=0V | DI=0V

(0x78 0x83): DiagDO=0V | DI=0V | DI=24V

(0x8E 0x99): DiagDO=24V | DI=0V | DI=24V

(0xA4 0xAF): DiagDO=0V | DI=24V | DI=24V

Example:

If an error with fault causes (bb) 0x02 or 0x04 occurs in a test stop step, the test action for the fault took place in the previous test stop step. The expected states are tested in the next step.

Master signals fault value 0001_04AF and slave signals fault value 0001_04A4.

aaaa = 1 i.e. FDO 0 affected

bb = 04h i.e. testing of DiagFDO has failed

cc = The expected states were tested in test stop step AF on the master and A4 on the slave. Expected state DiagDO=0V is being tested in the table; in other words, the Diag DO was at 0 V instead of the expected 24 V. The associated test action took place in the previous step (0x99 DO OFF 0xA4 DO OFF). Both DOs were switched to OFF.

Remedy: Check the wiring of the F-DIs and F-DOs and restart the test stop. The fault is withdrawn if the test stop is successfully completed.

Fault values 0xC0000000 / 0xDDDDDDDD / 0xEEEEEEEE : These fault values are triggered together with alarm 35152. If they appear, you should check all test stop parameters. You should also check whether the firmware version of the TM54F matches the Control Unit's software version.

You also need to check P10001, P10017, P10046, and P10047.

A35014 TM54F: Test stop required

Message value: -

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause:

- after powering up the drive, a test stop has still not been carried out.
- a new test stop is required after commissioning.
- the time to carry out the forced checking procedure (test stop) has expired (p10003).

Remedy: Initiate test stop (BI: p10007).

A35015 TM54F: Communication with drive not established

Message value: Fault cause: %1 bin
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Cyclic communication of one or several drives with the Terminal Module 54F (TM54F) is not active.
Fault value (r0949, interpret binary):
Bit 0 = 1: No communication with drive 1.
...
Bit 5 = 1: No communication with drive 6.
For fault value = 0, the following applies:
The number of drive objects specified in p10010 is not equal to the number of drives that have drive-based motion monitoring functions that have been enabled.
The drive object number for drive n is set in p10010[n-1].
When this fault is present, none of the drives that have drive-based motion monitoring functions operating with TM54F, are enabled.
Remedy: For all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).

A35016 TM54F: Net data communication with drive not established

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The cyclic net data communication within the Terminal Module 54F (TM54F) is still not active.
This message is output after the TM54F master and TM54F slave have booted and is automatically withdrawn as soon as communications have been established.
If a drive does not communicate with the TM54F, then none of the drives parameterized in p10010 are enabled.
Remedy: When replacing a Motor Module, carry out the following steps:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
The following always applies:
- for all drive objects specified in p10010, check whether the drive-based motion monitoring functions with TM54F are enabled (p9601).
- check whether fault F35150 is present and if required, remove the cause of the fault.
See also: r10055 (SI TM54F communication status drive-specific)

F35040 TM54F: 24 V undervoltage

Message value: Fault cause: %1 bin
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: For the 24 V power supply for the Terminal Module 54F (TM54F) an undervoltage condition was detected.
As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Fault value (r0949, interpret binary):
Bit 0 = 1: Power supply undervoltage at connection X524.
Bit 1 = 1: Power supply undervoltage at connection X514.
Remedy: - check the 24 V DC power supply for the TM54F.
- carry out safe acknowledgement (p10006).

F35043	TM54F: 24 V overvoltage
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	For the 24 V power supply for the Terminal Module 54F (TM54F) an overvoltage condition was detected. As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
Remedy:	- check the 24 V DC power supply for the TM54F. - carry out safe acknowledgement (p10006).
F35051	TM54F: Defect in a monitoring channel
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The Terminal Module 54F (TM54F) has identified an error in the data cross check between the two control channels. As fault response fail-safe input terminal signals are transferred to the motion monitoring functions. Fault value (r0949, interpret hexadecimal): aaaabbcc hex aaaa: A value greater than zero indicates an internal software error. bb: Data to be cross-checked that resulted in the error. bb = 00 hex: p10000 bb = 01 hex: p10001 bb = 02 hex: p10002 bb = 03 hex: p10006 bb = 04 hex: p10008 bb = 05 hex: p10010 bb = 06 hex: p10011 bb = 07 hex: p10020 bb = 08 hex: p10021 bb = 09 hex: p10022 bb = 0A hex: p10023 bb = 0B hex: p10024 bb = 0C hex: p10025 bb = 0D hex: p10026 bb = 0E hex: p10027 bb = 0F hex: p10028 bb = 10 hex: p10036 bb = 11 hex: p10037 bb = 12 hex: p10038 bb = 13 hex: p10039 bb = 14 hex: p10040 bb = 15 hex: p10041 bb = 16 hex: p10042 bb = 17 hex: p10043 bb = 18 hex: p10044 bb = 19 hex: p10045 bb = 1A hex: p10046 bb = 1B hex: Test stop internal p10041 bb = 1C hex: Test stop internal p10046 bb = 1D hex: - 1F hex test stop internal p10017, p10002, p10000 bb = 20 hex: - 2A hex test stop internal p10040 bb = 2B hex: Test stop initialization bb = 2C hex: Input/output calculation initialization bb = 2D hex: - 45 hex internal data for output calculation, P10042 - P10045 bb = 46 hex - 63 hex data for SGE calculation of drive group 1 bb = 64 hex - 81 hex data for SGE calculation of drive group 2 bb = 82 hex - 9F hex data for SGE calculation of drive group 3

bb = A0 hex - BD hex data for SGE calculation of drive group 4
 bb = BE hex debounce time of FDI inputs, P10017
 bb = BF hex debounce time of DI inputs, P10017
 bb = C0 hex debounce time of diag inputs, P10017
 cc: Index of the data to be cross-checked that resulted in the error.

Remedy:

Carry out the following steps on the TM54F:
 - activate the safety commissioning mode (p0010 = 95).
 - start the copy function for SI parameters (p9700 = 57 hex).
 - acknowledge complete data change (p9701 = AC hex).
 - exit the safety commissioning mode (p0010 = 0).
 - save all parameters (p0977 = 1).
 - carry out safe acknowledgement (p10006).
 For an internal software error (aaaa greater than zero):
 - upgrade the software on the TM54F.
 - contact the Hotline.
 - replace the TM54F.

F35052 (A) TM54F: Internal hardware error

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: An internal software/hardware error has been detected on the Terminal Module 54F (TM54F).
 Fault value (r0949, interpret decimal):
 Only for internal Siemens troubleshooting.
Remedy:
 - check the electrical cabinet design and cable routing for EMC compliance
 - upgrade TM54F firmware to more recent version.
 - contact the Hotline.
 - replace the TM54F.
 Reaction upon A: NONE
 Acknowl. upon A: NONE

F35053 TM54F: Temperature fault threshold exceeded

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The temperature measured using the temperature sensing on the TM54F has exceeded the threshold value to initiate this fault.
 As fault response fail-safe input terminal signals are transferred to the motion monitoring functions.
 Fault value (r0949, interpret decimal):
 Only for internal Siemens troubleshooting.
Remedy:
 - allow the TM54F to cool down.
 - carry out safe acknowledgement (p10006).

A35054 TM54F: Temperature alarm threshold exceeded

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The temperature measured using the temperature sensing on the TM54F has exceeded the threshold value to initiate this alarm.
Remedy:
 - allow the TM54F to cool down.
 - carry out safe acknowledgement (p10006).

A35075 (F)	TM54F: Error during internal communication
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	An internal communications error has occurred in the Terminal Module 54F (TM54F). This alarm can also occur if the TM54F exists and no safety function has yet been parameterized. Alarm value (r2124, interpret decimal): Only for internal Siemens diagnostics.
Remedy:	For internal communication errors: - check the electrical cabinet design and cable routing for EMC compliance - upgrade the software on the TM54F. - contact the Hotline. - replace the TM54F. If TM54F exists and no safety function has yet been parameterized: - None necessary. The alarm disappears automatically after a safety function has been parameterized.
Reaction upon F:	NONE
Acknowl. upon F:	IMMEDIATELY (POWER ON)
A35080 (F)	TM54F: Checksum error safety parameters
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The calculated checksum entered in r10004 over the safety-relevant parameters does not match the reference checksum saved in p10005 at the last machine acceptance. Fault value (r0949, interpret decimal): 1: Checksum error for functional SI parameters. 2: Checksum error for SI parameters for component assignment.
Remedy:	- check the safety-relevant parameters and if required, correct. - set the reference checksum to the actual checksum. - acknowledge that hardware was replaced - carry out a POWER ON. - carry out an acceptance test.
Reaction upon F:	NONE
Acknowl. upon F:	IMMEDIATELY (POWER ON)
A35081 (F)	TM54F: Static (steady state) 1 signal at the F-DI for safety-relevant acknowledgement
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	A logical 1 signal is present at the F-DI configured in p10006 for more than 10 seconds. A logical 0 signal must be present statically (steady-state) at the F-DI. This avoids unintentional safety-relevant acknowledgement (or the "Internal Event Acknowledge" signal) if a wire breaks or one of the two digital inputs bounces.
Remedy:	Set F-DI (see p10006) to logical 0 signal.
Reaction upon F:	NONE
Acknowl. upon F:	IMMEDIATELY

F35150 TM54F: Communication error

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A communication error between the TM54F master and Control Unit or between the TM54F slave and the Motor Module was detected.
Fault value (r0949, interpret hexadecimal):
Only for internal Siemens troubleshooting.
Remedy: When replacing a Motor Module, carry out the following steps:
- start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
- acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
- save all parameters (p0977 = 1).
- carry out a POWER ON (power off/on) for all components.
The following always applies:
- check the electrical cabinet design and cable routing for EMC compliance
- upgrade the software on the TM54F.
- contact the Hotline.
- replace the TM54F.

F35151 TM54F: Discrepancy error

Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: The safety input terminals or output terminals show a different state longer than that parameterized in p10002.
Fault value (r0949, interpret hexadecimal):
yyyyxxxx hex
xxxx:
The safety-relevant input terminals F-DI indicate a discrepancy.
Bit 0: Discrepancy for F-DI 0
...
Bit 9: Discrepancy for F-DI 9
yyyy:
The safety-relevant output terminals F-DO indicate a discrepancy.
Bit 0: Discrepancy for F-DO 0
...
Bit 3: Discrepancy for F-DO 3
Note:
If several discrepancy errors occur consecutively, then this fault is only signaled for the first error that occurs.
The following possibilities exist of diagnosing all of the discrepancy errors:
- in the commissioning software, evaluate the input states and output states of the TM54F. All discrepancy errors are displayed here.
- compare parameters p10051 and p10052 from the TM54F master and TM54F slave for discrepancy.

Remedy: Check the wiring of the F-DI and F-DO (contact problems).
Note:
 A discrepancy of the F-DO also occurs (in this special case, in conjunction with fault F35150 for the TM54F slave), if, after replacing a Motor Module, it was forgotten to acknowledge this.
 When replacing a Motor Module, carry out the following steps:
 - start the copy function for the node identifier on the TM54F (p9700 = 1D hex).
 - acknowledge the hardware CRC on the TM54F (p9701 = EC hex).
 - save all parameters (p0977 = 1).
 - carry out a POWER ON (power off/on) for all components.
 Discrepancy errors in the F-DIs can only be completely acknowledged if, after the cause of the error was resolved, safe acknowledgement was carried out (see p10006). As long as safety acknowledgement was not carried out, the corresponding F-DI stays in the safe state.
 F-DI: Failsafe Digital Input
 F-DO: Failsafe Digital Output
 Where switching operations recur cyclically on the FDIs, the discrepancy time must be parameterized as follows:
 td = possible actual discrepancy time (in ms) that can occur with a switching operation. This must correspond to at least 1 SI sampling cycle (see p10000).
 tp = period for a switching operation in ms.
 The following rules must be adhered to:
 $p10002 < (tp/2) - td$ (discrepancy time must be less than half the period minus the actual discrepancy time)
 $p10002 > = p10000$ (discrepancy time must be no less than P10000)
 $p10002 > td$ (discrepancy time must be greater than the switch discrepancy time which may actually apply)
 Example: If SI sampling cycle is 12 ms and switching frequency is 110 ms, the maximum discrepancy time which can be set is as follows:
 $p10002 < = 110ms/2 - 12ms = 43ms$; this rounds off to $P10002 < = 36 ms$.
 (Since the sampling time can only be accepted as a whole SI sampling cycle, the value will need to be rounded up or down to a whole SI sampling time value if it is not an exact multiple of an SI sampling cycle.)

F35152 TM54F: Internal software error
Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: An internal software error has occurred in the Terminal Module 54F (TM54F).
 The fail-safe digital inputs and digital outputs (F-DI, F-DO) on the TM54F have been set to the safe state.
Note:
 F-DI: Failsafe Digital Input
 F-DO: Failsafe Digital Output
Remedy: Check that the firmware version of the TM54F matches the Control Unit's firmware version.
 The automatic firmware update must be activated in the project.
Note:
 This signal will also appear, for example, in conjunction with signal 35013. In this case you should check all the parameters for the test stop on the TM54F (p10001, p10003, p10007, p10041, p10046, p10047).

A35200 (F, N) TM: Calibration data
Message value: %1
Drive object: A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: An error was detected in the calibration data of the Terminal Module.
 Alarm value (r2124, interpret decimal):
 The hundred-thousands and ten-thousands position specifies the component ID of the Terminal Module which detected the fault.
 The thousands location specifies whether the analog input 0 (=0) or analog output 1 (= 1) is involved.
 The hundreds location specifies the fault type:
 No calibration data available.
 1: Offset too high (> 100 mV).
 The tens and ones location specifies the number of the input involved.

Remedy: Power down the unit and power up again.
If the fault is still present, replace the module/board.

Reaction upon F: NONE

Acknowl. upon F: IMMEDIATELY (POWER ON)

Reaction upon N: NONE

Acknowl. upon N: NONE

F35207 (N, A) TM: Temperature fault/alarm threshold channel 1 exceeded

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR

Reaction: Infeed: OFF2 (NONE, OFF1)
Servo: OFF2 (NONE, OFF1, OFF3)
Vector: OFF2 (NONE, OFF1, OFF3)

Acknowledge: IMMEDIATELY (POWER ON)

Cause: For the temperature evaluation via the Terminal Module (TM), at least one of the following conditions to initiate this fault is fulfilled:
- alarm threshold has been exceeded longer than that set in the timer stage (p4102[0], p4103).
or
- fault threshold exceeded (p4102[1]).
Note:
For PTC, the following applies:
- if r4101 > 1650 ohms, the temperature r4105 = 250 °C
- if r4101 <= 1650 ohms, the temperature r4105 = -50 °C
The measured temperature is displayed in r4105.
This fault can only be initiated if temperature evaluation was activated (p4100 = 2 for KTY sensor or p4100 = 1 for PTC sensor or p4100 = 4 for bimetal).
Notice:
This fault only causes the drive to shut down if there is at least one BICO interconnection between the drive and the Terminal Module.
Fault value (r0949, interpret decimal):
yyxxxx dec:
yy: Component number of the component which detected the fault.
xxxx: Temperature value multiplied by 10 at the point of initiation

Remedy: - reduce ambient temperature of temperature sensor to below p4102[1] hysteresis.
- if required, set the fault response to NONE (p2100, p2101).

F35220 (N, A)	TM: Frequency limit reached for signal output
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: OFF1 (NONE, OFF2, OFF3) Vector: OFF1 (NONE, OFF2, OFF3)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	The signals output from the Terminal Module 41 (TM41) for tracks A/B have reached the limit frequency. The output signals are no longer in synchronism with the specified setpoint. Note: If with SIMOTION the TM41 has been configured as the technology project, this fault is also output in response to short-circuited A/B signals in X520.
Remedy:	SIMOTION (p4400 = 0) operating mode: - enter a lower speed setpoint (p1155). - reduce the encoder pulse number (p0408). - check track A/B for short-circuits. SINAMICS (p4400 = 1) operating mode: - the fine resolution of TM41 in p0418 does not match that of the connector input that was interconnected at P4420 - the encoder position actual value r0479 interconnected at connector input p4420 has an excessively high actual speed
Reaction upon N:	NONE

A35222 (F, N)	TM: Encoder pulse number not permissible
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The encoder pulse number entered does not match the permissible pulse number from a hardware perspective. Fault value (r0949, interpret decimal): 1: Encoder pulse number is too high. 2: Encoder pulse number is too low. 4: Encoder pulse number is less than the zero mark offset (p4426).

Remedy:

- enter the encoder pulse number in the permissible range (p0408).
- if necessary, replace TM41 SAC with TM41 DAC.

Note:

TM41 SAC: order no. = 6SL3055-0AA00-3PA0

TM41 DAC: order no. = 6SL3055-0AA00-3PA1

The following applies for TM41 SAC:

- minimum/maximum value for p0408: 1000/8192

The following applies for TM41 DAC:

- minimum/maximum value for p0408: 1000/16384

A35224 (N) TM: Zero mark synchronization interrupted

Message value: %1

Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR

Reaction: NONE

Acknowledge: NONE

Cause: The zero mark synchronization with the encoder to be emulated was interrupted.
 Alarm value (r2124, interpret decimal):
 0: The encoder is not in the ready state (e.g. encoder parked)
 1: An absolute encoder was connected.
 2: The encoder r0479[0...2] interconnected with CI: p4420 is already communicating with another TM41 (precisely one TM41 can be interconnected with a specific r0479[0...2]).
 3: The BICO interconnection to Terminal Module 41 (TM41) was removed (CI: p4420 = 0 signal).
 4: The encoder connected with CI: p4420 has carried out an EDS changeover or has been re-parameterized (this operation is not supported, set p4420 to 0 and interconnect again).
 5: The maximum number of revolutions of the encoder was exceeded.
 6: Encoder in an invalid state.
 7: Encoder in an invalid state.
 8: Encoder in an invalid state (the encoder is not parameterized or the interconnected signal source is not in the cyclic state).

Remedy: None necessary.
- if the encoder changes into the ready state, then a synchronization operation that was previously interrupted is carried out again.
- if the synchronization was interrupted due to the maximum permissible synchronization duration, then a new synchronization is not carried out.
- for an absolute encoder, no synchronization is carried out, the zero mark is always output at the zero revolution of the TM41.

Reaction upon N: NONE
Acknowl. upon N: NONE

A35225 TM: Zero mark synchronization held - encoder not in the ready state

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The zero mark synchronization with the encoder to be emulated was held.
The encoder is not in the "ready" state.
Remedy: Bring the encoder into the "ready" state.

A35226 TM: Tracks A/B are deactivated

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The output of tracks A/B of the Terminal Module 41 (TM41) has been held (frozen).
The encoder emulation of the TM41 hardware is enabled (this is necessary so that no TRI state of the A/B tracks occurs). The hardware receives a setpoint of zero so that no motion occurs at the A/B tracks.
Reasons for this alarm:
- CI: p4420 was not interconnected (in this case, the encoder emulation of the hardware is deactivated)
- the encoder is not in the "ready" state (parking encoder or non-parameterized encoder data set).
- for TM41 there is an additional fault.
Remedy: - establish an interconnection from CI: p4420.
- bring the encoder into the "ready" state.
- remove any TM41 faults.

A35227 EDS changeover/encoder data set change not supported

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: Terminal Module 41 (TM41) does not support these particular application cases:
- the encoder interconnected via connector input p4420 has carried out an EDS changeover
- the encoder connected to the TM41 was re-parameterized such that the position actual value of the encoder required complete re-interpretation. This is the case with, for example, a change to p410 or p1821 (motor direction of rotation reversal) or a change to the fine resolution. This may amount to a sudden change in the position actual value, which cannot be output on the TM41.
Terminal Module 41 (TM41) does not support these particular application cases.
See also: p4420 (TM41 incremental encoder emulation position actual value)
Remedy: Set connector input p4420 = 0 and re-wire.

F35228	TM: Sampling time p4099[3] invalid
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: NONE Vector: NONE
Acknowledge:	IMMEDIATELY
Cause:	The value of the cycle time for the incremental encoder emulation, specified in p4099[3] does not correspond to a valid value. The system has already changed p4099[3] to a valid value. The parameters of the TM41 in question must be saved on the memory card and a POWER ON carried out. If necessary, the sampling time can be checked again the next time the system is switched on, taking into account any other TM41s located on the same DRIVE-CLiQ line. The following rules must be observed when setting p4099[3]: - if several TM41 are located on a DRIVE-CLiQ line, the same sampling time in p4099[3] must be set for all components. - the sampling time of a TM41 in SINAMICS mode (p4400) must correspond to that of the emulated encoder. The encoder sampling time is normally the same as the parameter value p0115[0] of the drive object used to interconnect the TM41 via connector input p4420. - it is not possible to operate two TM41s on one line if they emulate encoders with different cycles. - this fault cannot be resolved by removing the BICO connection (p4420 == 0). With subsequent reconnection
Remedy:	This fault can be temporarily resolved by removing the BICO connection (p4420 == 0), so that it is possible to continue working without alarms. This renders the TM41 inactive. Following subsequent BICO reconnection, the sampling time is checked again and the alarm output if necessary.
F35229	TM time slice deactivated
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: NONE Vector: NONE
Acknowledge:	IMMEDIATELY
Cause:	The required value of a cycle time in p4099[0...2] is invalid. The corresponding time slice was not activated. Alarm value (r2124, interpret decimal): 0: Digital input/outputs (p4099[0]) 1: Analog inputs (p4099[1]) 3: Encoder emulation (p4099[3]). 4: Encoder emulation speed setpoint (p4099[3]). 5: Encoder emulation speed setpoint (p4099[3]). 6: Internal sequence control of the TM41 (internal error)
Remedy:	The sampling time p4099[0] may not be zero. Change the sampling time corresponding to the error code.
F35230	HW problem with the TM module
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM15DI_DO, TM31, TM41, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: NONE Vector: NONE
Acknowledge:	POWER ON
Cause:	The terminal module used has signaled an internal error. Signals of this module may not be evaluated and are potentially incorrect.
Remedy:	The module must be replaced if no other alarms that refer to a communications error are present in the system.

A35231	TM: Master control by PLC missing
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The "master control by PLC" signal was missing in operation. - interconnection of the binector input for "master control by PLC" is incorrect (p0854). - the higher-level control has withdrawn the "master control by PLC" signal. - data transfer via the fieldbus (master/drive) was interrupted. Note: This alarm is only decisive in the "SIMOTION" operating mode (p4400 = 0). In the "SINAMICS" operating mode, the setpoints at p4420 are evaluated independent of binector input p0854.
Remedy:	- check the interconnection of the binector input for "master control by PLC" (p0854). - check the "master control by PLC" signal and, if required, switch in. - check the data transfer via the fieldbus (master/drive). - check the setting of parameter p2037.

A35232	TM41: Zero mark no longer synchronous : Power ON required
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	SINAMICS (p4400 = 1) operating mode: When parameterizing a Terminal Module 41 (TM41) or when operating a TM41 Module, an operating state was reached which required a POWER ON. These include: - changing the encoder pulse number (p0408). - changing the fine resolution (p0418). - withdrawing the DRIVE-CLiQ cable without first deactivating TM41 via p0105. If this alarm was output, then the zero mark of the TM41 can no longer be output in synchronism to that of the encoder interconnected at p4420. SIMOTION (p4400 = 0) operating mode: A previously set zero mark position (p4426) no longer matches encoder position (r0479) due to the change in the pulse number (p0408).
Remedy:	The incremental position at output X520 of TM41 can still be evaluated independent of the zero mark. A POWER ON must be carried out if the TM41 zero mark is evaluated.

F35233	DRIVE-CLiQ component does not support function
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM31, TM41, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	A function requested by the Control Unit is not supported by a DRIVE-CLiQ component. Fault value (r0949, interpret decimal): 1: Terminal Module 31 does not support the function "Timer for temperature evaluation" (X522.7/8, p4103 > 0.000).
Remedy:	Re fault value = 1: - Deactivate timer for temperature evaluation (X522.7/8) (p4103 = 0.000). - Use Terminal Module 31 and the relevant firmware version to enable the "Timer for temperature evaluation" function (Order No. 6SL3055-0AA00-3AA1, firmware version 2.6 and higher). See also: p4103

Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Terminal Module to the encoder involved. The nodes do not send and receive in synchronism. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 21 hex: The cyclic telegram has not been received. xx = 22 hex: Timeout in the telegram receive list. xx = 40 hex: Timeout in the telegram send list.
Remedy:	- carry out a POWER ON. - replace the component involved. See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35836	TM DRIVE-CLiQ: Send error for DRIVE-CLiQ data
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Terminal Module to the encoder involved. Data were not able to be sent. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 41 hex: Telegram type does not match send list.
Remedy:	Carry out a POWER ON.

F35837	PTM DRIVE-CLiQ: Component fault
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 20 hex: Error in the telegram header. xx = 23 hex: Receive error: The telegram buffer memory contains an error. xx = 42 hex: Send error: The telegram buffer memory contains an error. xx = 43 hex: Send error: The telegram buffer memory contains an error.
Remedy:	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.

F35845	TM DRIVE-CLiQ: Cyclic data transfer error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the encoder involved. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0B hex: Synchronization error during alternating cyclic data transfer.
Remedy:	Carry out a POWER ON. See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F35850	TM: Internal software error
Message value:	%1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	Infeed: OFF1 (NONE, OFF2) Servo: OFF1 (NONE, OFF2, OFF3) Vector: OFF1 (NONE, OFF2, OFF3)
Acknowledge:	POWER ON
Cause:	An internal software error in the Terminal Module (TM) has occurred. Fault value (r0949, interpret decimal): 1: Background time slice is blocked. 2: Checksum over the code memory is not OK.
Remedy:	- replace the Terminal Module (TM). - if required, upgrade the firmware in the Terminal Module. - contact the Hotline.
F35851	TM DRIVE-CLiQ (CU): Sign-of-life missing
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved. The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0A hex = 10 dec: The sign-of-life bit in the receive telegram is not set.
Remedy:	Upgrade the firmware of the component involved.
F35860	TM DRIVE-CLiQ (CU): Telegram error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 11 hex = 17 dec: CRC error and the receive telegram is too early. xx = 01 hex = 01 dec: Checksum error (CRC error). xx = 12 hex = 18 dec: The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early. xx = 02 hex = 02 dec: Telegram is shorter than specified in the length byte or in the receive list. xx = 13 hex = 19 dec: The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early. xx = 03 hex = 03 dec: Telegram is longer than specified in the length byte or in the receive list. xx = 14 hex = 20 dec: The length of the receive telegram does not match the receive list and the receive telegram is too early. xx = 04 hex = 04 dec: The length of the receive telegram does not match the receive list. xx = 15 hex = 21 dec: The type of the receive telegram does not match the receive list and the receive telegram is too early. xx = 05 hex = 05 dec: The type of the receive telegram does not match the receive list.

xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex = 06 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 09 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy:

- carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F35885 TM DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex = 26 dec:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex = 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.
xx = 62 hex = 98 dec:
Error at the transition to cyclic operation.

Remedy:

- check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.

See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F35886 TM DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: OFF1 (OFF2)
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy:

Carry out a POWER ON.

F35887	TM DRIVE-CLiQ (CU): Component fault
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	Fault detected on the DRIVE-CLiQ component (Terminal Module) involved. Faulty hardware cannot be excluded. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 20 hex: Error in the telegram header. xx = 23 hex: Receive error: The telegram buffer memory contains an error. xx = 42 hex: Send error: The telegram buffer memory contains an error. xx = 43 hex: Send error: The telegram buffer memory contains an error. xx = 60 hex: Response received too late during runtime measurement. xx = 61 hex: Time taken to exchange characteristic data too long.
Remedy:	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.
F35895	TM DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	OFF1 (OFF2)
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communication error has occurred from the Terminal Module (TM) to the Control Unit involved. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0B hex: Synchronization error during alternating cyclic data transfer.
Remedy:	Carry out a POWER ON. See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)
F35896	TM DRIVE-CLiQ (CU): Inconsistent component properties
Message value:	Component number: %1
Drive object:	A_INF, B_INF, CU_LINK, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	Infeed: OFF2 (NONE, OFF1) Servo: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2) Vector: OFF2 (IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY
Cause:	The properties of the DRIVE-CLiQ component (Terminal Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced. Fault value (r0949, interpret decimal): Component number.
Remedy:	- carry out a POWER ON. - when a component is replaced, the same component type and if possible the same firmware version should be used. - when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F35897	TM DRIVE-CLiQ (CU): no communication with component
Message value:	Preliminary component number: %1
Drive object:	VECTOR
Reaction:	OFF2 (ENCODER, IASC/DCBRAKE, NONE, OFF1, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	Communications with the DRIVE-CLiQ component (Terminal Module) specified by the fault value is not possible. One cause may, for example, be that a DRIVE-CLiQ cable has been withdrawn. Fault value (r0949, interpret decimal): Component ID.
Remedy:	- check the DRIVE-CLiQ connections. - carry out a POWER ON.

F35899 (N, A)	TM: Unknown fault
Message value:	New message: %1
Drive object:	A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction:	Infeed: NONE (OFF1, OFF2) Servo: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2) Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge:	IMMEDIATELY (POWER ON)
Cause:	A fault has occurred on the Terminal Module that cannot be interpreted by the Control Unit firmware. This can occur if the firmware on this component is more recent than the firmware on the Control Unit. Fault value (r0949, interpret decimal): Fault number. Note: If required, the significance of this new fault can be read about in a more recent description of the Control Unit.
Remedy:	- replace the firmware on the Terminal Module by an older firmware version (r0158). - upgrade the firmware on the Control Unit (r0018).

A35911 (F, N) TM: Clock synchronous operation sign-of-life missing

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The maximum permissible number of errors in the master sign-of-life (clock synchronous operation) has been exceeded in cyclic operation.
When the alarm is output, the module outputs are reset up to the next synchronization.
Remedy: - check the physical bus configuration (terminating resistor, shielding, etc.).
- check the interconnection of the master sign-of-life (r4201 via p0915).
- check whether the master correctly sends the sign-of-life (e.g. set up a trace with r4201.12 ... r4201.15 and trigger signal r4301.9).
- check the bus and master for utilization level (e.g. bus cycle time Tdp was set too short).

A36804 (F, N)	Hub: Checksum error
Message value:	%1
Drive object:	A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	A checksum error has occurred when reading out the program memory on the DRIVE-CLiQ Hub Module. Alarm value (r2124, interpret hexadecimal): Difference between the checksum at POWER ON and the actual checksum.
Remedy:	- check whether the permissible ambient temperature for the component is maintained. - replace the DRIVE-CLiQ Hub Module.
Reaction upon F:	NONE
Acknowl. upon F:	IMMEDIATELY (POWER ON)
Reaction upon N:	NONE
Acknowl. upon N:	NONE
A36805 (F, N)	Hub: EEPROM checksum incorrect
Message value:	%1
Drive object:	A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The internal parameter data on the DRIVE-CLiQ Hub Module is incorrect. Alarm value (r2124, interpret hexadecimal): 01: EEPROM access error. 02: Too many blocks in the EEPROM.
Remedy:	- check whether the permissible ambient temperature for the component is maintained. - replace the DRIVE-CLiQ Hub Module.
Reaction upon F:	NONE
Acknowl. upon F:	IMMEDIATELY (POWER ON)
Reaction upon N:	NONE
Acknowl. upon N:	NONE
F36820	Hub DRIVE-CLiQ: Telegram error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	A DRIVE-CLiQ communications error has occurred from the Control Unit to the DRIVE-CLiQ Hub Module involved. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 01 hex = 1 dec: Checksum error (CRC error). xx = 02 hex = 2 dec: Telegram is shorter than specified in the length byte or in the receive list. xx = 03 hex = 3 dec: Telegram is longer than specified in the length byte or in the receive list. xx = 04 hex = 4 dec: The length of the receive telegram does not match the receive list. xx = 05 hex = 5 dec: The type of the receive telegram does not match the receive list. xx = 06 hex = 6 dec: The address of the component in the telegram and in the receive list do not match. xx = 07 hex = 7 dec: A SYNC telegram is expected - but the received telegram is not a SYNC telegram. xx = 08 hex = 8 dec: No SYNC telegram is expected - but the received telegram is one.

xx = 09 hex = 9 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy:

- carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F36835 Hub DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the DRIVE-CLiQ Hub Module involved.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex = 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.

Remedy:

- carry out a POWER ON.
- replace the component involved.

See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F36836 Hub DRIVE-CLiQ: Send error for DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the DRIVE-CLiQ Hub Module involved.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex = 65 dec:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F36837 Hub DRIVE-CLiQ: Component fault

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex = 32 dec:
Error in the telegram header.
xx = 23 hex = 35 dec:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex = 66 dec:
Send error: The telegram buffer memory contains an error.
xx = 43 hex = 67 dec:
Send error: The telegram buffer memory contains an error.

Remedy:

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F36845 Hub DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the DRIVE-CLiQ Hub Module involved.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 0B hex = 11 dec:
 Synchronization error during alternating cyclic data transfer.
Remedy: Carry out a POWER ON.
 See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F36851 Hub DRIVE-CLiQ (CU): Sign-of-life missing

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
 The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 0A hex = 10 dec:
 The sign-of-life bit in the receive telegram is not set.
Remedy: Upgrade the firmware of the component involved.

F36860 Hub DRIVE-CLiQ (CU): Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 11 hex = 17 dec:
 Checksum error (CRC error) and the receive telegram is too early.
 xx = 01 hex = 01 dec:
 Checksum error (CRC error).
 xx = 12 hex = 18 dec:
 The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
 xx = 02 hex = 2 dec:
 Telegram is shorter than specified in the length byte or in the receive list.
 xx = 13 hex = 19 dec:
 The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
 xx = 03 hex = 3 dec:
 Telegram is longer than specified in the length byte or in the receive list.
 xx = 14 hex = 20 dec:
 The length of the receive telegram does not match the receive list and the receive telegram is too early.
 xx = 04 hex = 4 dec:
 The length of the receive telegram does not match the receive list.
 xx = 15 hex = 21 dec:
 The type of the receive telegram does not match the receive list and the receive telegram is too early.
 xx = 05 hex = 5 dec:
 The type of the receive telegram does not match the receive list.

xx = 16 hex = 22 dec:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex = 6 dec:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex = 25 dec:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex = 9 dec:
The error bit in the receive telegram is set.
xx = 10 hex = 16 dec:
The receive telegram is too early.

Remedy:

- carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F36885 Hub DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex = 26 dec:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex = 33 dec:
The cyclic telegram has not been received.
xx = 22 hex = 34 dec:
Timeout in the telegram receive list.
xx = 40 hex = 64 dec:
Timeout in the telegram send list.
xx = 62 hex = 98 dec:
Error at the transition to cyclic operation.

Remedy:

- check the supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.

F36886 Hub DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2
Drive object: A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction: NONE
Acknowledge: IMMEDIATELY
Cause: DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex = 65 dec:
Telegram type does not match send list.

Remedy:

- Carry out a POWER ON.

F36887	Hub DRIVE-CLiQ (CU): Component fault
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	Fault detected on the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module) involved. Faulty hardware cannot be excluded. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 20 hex = 32 dec: Error in the telegram header. xx = 23 hex = 35 dec: Receive error: The telegram buffer memory contains an error. xx = 42 hex = 66 dec: Send error: The telegram buffer memory contains an error. xx = 43 hex = 67 dec: Send error: The telegram buffer memory contains an error. xx = 60 hex = 96 dec: Response received too late during runtime measurement. xx = 61 hex = 97 dec: Time taken to exchange characteristic data too long.
Remedy:	- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...). - check the electrical cabinet design and cable routing for EMC compliance - if required, use another DRIVE-CLiQ socket (p9904). - replace the component involved.
F36895	Hub DRIVE-CLiQ (CU): Alternating cyclic data transfer error
Message value:	Component number: %1, fault cause: %2
Drive object:	A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	DRIVE-CLiQ communication error from DRIVE-CLiQ Hub Module in question to Control Unit. Fault value (r0949, interpret hexadecimal): yyxx hex: yy = component number, xx = fault cause xx = 0B hex = 11 dec: Synchronization error during alternating cyclic data transfer.
Remedy:	Carry out a POWER ON. See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)
F36896	Hub DRIVE-CLiQ (CU): Inconsistent component properties
Message value:	Component number: %1
Drive object:	A_INF, B_INF, CU_LINK, HUB, S_INF, SERVO, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, VECTOR
Reaction:	NONE
Acknowledge:	IMMEDIATELY
Cause:	The properties of the DRIVE-CLiQ component (DRIVE-CLiQ Hub Module), specified by the fault value, have changed in an incompatible fashion with respect to the properties when booted. One cause can be, e.g. that a DRIVE-CLiQ cable or DRIVE-CLiQ component has been replaced. Fault value (r0949, interpret decimal): Component number.
Remedy:	- carry out a POWER ON. - when a component is replaced, the same component type and if possible the same firmware version should be used. - when a cable is replaced, only cables whose length is the same as or as close as possible to the length of the original cables should be used (ensure compliance with the maximum cable length).

F36899 (N, A) Hub: Unknown fault

Message value: New message: %1
Drive object: A_INF, B_INF, HUB, S_INF, SERVO, TM41, VECTOR
Reaction: Infeed: NONE (OFF1, OFF2)
Servo: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Vector: NONE (IASC/DCBRAKE, OFF1, OFF2, OFF3, STOP1, STOP2)
Acknowledge: IMMEDIATELY (POWER ON)
Cause: A fault occurred on the DRIVE-CLiQ Hub Module that cannot be interpreted by the Control Unit firmware.
This can occur if the firmware on this component is more recent than the firmware on the Control Unit.
Fault value (r0949, interpret decimal):
Fault number.
Note:
If required, the significance of this new fault can be read about in a more recent description of the Control Unit.
Remedy:
- replace the firmware on the DRIVE-CLiQ Hub Module with older firmware (r0158).
- upgrade the firmware on the Control Unit (r0018).

yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F40837 CX32 DRIVE-CLiQ: Component fault

Message value: Component number: %1, fault cause: %2

Drive object: All objects

Reaction: OFF2

Acknowledge: IMMEDIATELY

Cause: Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 20 hex:
Error in the telegram header.
xx = 23 hex:
Receive error: The telegram buffer memory contains an error.
xx = 42 hex:
Send error: The telegram buffer memory contains an error.
xx = 43 hex:
Send error: The telegram buffer memory contains an error.

Remedy:

- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
- check the electrical cabinet design and cable routing for EMC compliance
- if required, use another DRIVE-CLiQ socket (p9904).
- replace the component involved.

F40845 CX32 DRIVE-CLiQ: Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the Control Unit to the controller extension involved.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 0B hex:
 Synchronization error during alternating cyclic data transfer.
Remedy: Carry out a POWER ON.
 See also: p9916 (DRIVE-CLiQ data transfer error shutdown threshold slave)

F40851 CX32 DRIVE-CLiQ (CU): Sign-of-life missing

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
 The DRIVE-CLiQ component did not set the sign-of-life to the Control Unit.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 0A hex:
 The sign-of-life bit in the receive telegram is not set.
Remedy: Upgrade the firmware of the component involved.

F40860 CX32 DRIVE-CLiQ (CU): Telegram error

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 11 hex:
 CRC error and the receive telegram is too early.
 xx = 01 hex:
 CRC error.
 xx = 12 hex:
 The telegram is shorter than that specified in the length byte or in the receive list and the receive telegram is too early.
 xx = 02 hex:
 Telegram is shorter than specified in the length byte or in the receive list.
 xx = 13 hex:
 The telegram is longer than that specified in the length byte or in the receive list and the receive telegram is too early.
 xx = 03 hex:
 Telegram is longer than specified in the length byte or in the receive list.
 xx = 14 hex:
 The length of the receive telegram does not match the receive list and the receive telegram is too early.
 xx = 04 hex:
 The length of the receive telegram does not match the receive list.
 xx = 15 hex:
 The type of the receive telegram does not match the receive list and the receive telegram is too early.
 xx = 05 hex:
 The type of the receive telegram does not match the receive list.

xx = 16 hex:
The address of the power unit in the telegram and in the receive list does not match and the receive telegram is too early.
xx = 06 hex:
The address of the power unit in the telegram and in the receive list do not match.
xx = 19 hex:
The error bit in the receive telegram is set and the receive telegram is too early.
xx = 09 hex:
The error bit in the receive telegram is set.
xx = 10 hex:
The receive telegram is too early.

Remedy:

- carry out a POWER ON.
- check the electrical cabinet design and cable routing for EMC compliance
- check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).

F40885 CX32 DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
The nodes do not send and receive in synchronism.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 1A hex:
Sign-of-life bit in the receive telegram not set and the receive telegram is too early.
xx = 21 hex:
The cyclic telegram has not been received.
xx = 22 hex:
Timeout in the telegram receive list.
xx = 40 hex:
Timeout in the telegram send list.
xx = 62 hex:
Error at the transition to cyclic operation.

Remedy:

- check the power supply voltage of the component involved.
- carry out a POWER ON.
- replace the component involved.

See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F40886 CX32 DRIVE-CLiQ (CU): Error when sending DRIVE-CLiQ data

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
Data were not able to be sent.
Fault value (r0949, interpret hexadecimal):
yyxx hex: yy = component number, xx = fault cause
xx = 41 hex:
Telegram type does not match send list.

Remedy: Carry out a POWER ON.

F40887 CX32 DRIVE-CLiQ (CU): Component fault

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: Fault detected on the DRIVE-CLiQ component concerned. Faulty hardware cannot be excluded.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 20 hex:
 Error in the telegram header.
 xx = 23 hex:
 Receive error: The telegram buffer memory contains an error.
 xx = 42 hex:
 Send error: The telegram buffer memory contains an error.
 xx = 43 hex:
 Send error: The telegram buffer memory contains an error.
 xx = 60 hex:
 Response received too late during runtime measurement.
 xx = 61 hex:
 Time taken to exchange characteristic data too long.
Remedy:
 - check the DRIVE-CLiQ wiring (interrupted cable, contacts, ...).
 - check the electrical cabinet design and cable routing for EMC compliance
 - if required, use another DRIVE-CLiQ socket (p9904).
 - replace the component involved.

F40895 CX32 DRIVE-CLiQ (CU): Cyclic data transfer error

Message value: Component number: %1, fault cause: %2
Drive object: All objects
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: A DRIVE-CLiQ communications error has occurred from the controller extension involved to the Control Unit.
 Fault value (r0949, interpret hexadecimal):
 yyxx hex: yy = component number, xx = fault cause
 xx = 0B hex:
 Synchronization error during alternating cyclic data transfer.
Remedy:
 Carry out a POWER ON.
 See also: p9915 (DRIVE-CLiQ data transfer error shutdown threshold master)

F49150 Cooling system: Fault occurred

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The cooling system signals a general fault.
Remedy:
 - check the wiring between the cooling system and the input terminal (Terminal Module).
 - check the external control device for the cooling system.
 See also: p0266 (Cooling system, feedback signals, signal source)

F49151 Cooling system: Conductivity has exceeded the fault threshold

Message value: -
Drive object: A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The conductivity of the cooling liquid has exceeded the selected fault threshold (p0269[2]).
 See also: p0261 (Cooling system, starting time 2), p0262 (Cooling system, fault conductivity delay time), p0266 (Cooling system, feedback signals, signal source)
Remedy:
 Check the device to de-ionize the cooling liquid.

F49152	Cooling system: ON command feedback signal missing
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The feedback signal of the ON command of the cooling system is missing. - after the ON command, the feedback signal has not been received within the selected starting time (p0260). - the feedback signal has failed in operation. See also: p0260 (Cooling system, starting time 1), r0267 (Cooling system status word)
Remedy:	- check the wiring between the cooling system and the input terminal (Terminal Module). - check the external control device for the cooling system.

F49153	Cooling system: Liquid flow too low
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The drive converter cooling system signals that the cooling liquid flow is too low. - after the ON command, the feedback signal has not been received within the selected starting time (p0260). - in operation, the feedback signal has failed for longer than the permitted failure time (p0263). See also: p0260 (Cooling system, starting time 1), p0263 (Cooling system fault liquid flow, delay time), r0267 (Cooling system status word)
Remedy:	- check the wiring between the cooling system and the input terminal (Terminal Module). - check the external control device for the cooling system.

F49154 (A)	Cooling system: Liquid leak is present
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The liquid leakage monitoring function has responded. Caution: If this fault is re-parameterized as an alarm then using other monitoring functions it must be ensured that when cooling water is lost, the drive is powered down! See also: r0267 (Cooling system status word)
Remedy:	- check the cooling system for leaks in the cooling circuit. - check the wiring of the input terminal (Terminal Module) used to monitor leaking fluid.
Reaction upon A:	NONE
Acknowled. upon A:	NONE

F49155	Cooling system: Power Stack Adapter, firmware version too old
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	POWER ON
Cause:	The firmware version in the Power Stack Adapter (PSA) is too old and does not support the liquid cooling.
Remedy:	Upgrade the firmware. Check EEPROM data.

F49156	Cooling system: Cooling liquid temperature has exceeded the fault threshold
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	OFF2
Acknowledge:	IMMEDIATELY
Cause:	The cooling liquid intake temperature has exceeded the permanently set fault threshold.
Remedy:	Check the cooling system and the ambient conditions.

A49170	Cooling system: Alarm has occurred
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The cooling system signals a general alarm.
Remedy:	- check the wiring between the cooling system and the input terminal (Terminal Module). - check the external control device for the cooling system.
A49171	Cooling system: Conductivity has exceeded the alarm threshold
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO
Reaction:	NONE
Acknowledge:	NONE
Cause:	The conductivity of the cooling liquid has exceeded the selected alarm threshold (p0269[1]). See also: p0261 (Cooling system, starting time 2), p0262 (Cooling system, fault conductivity delay time), p0266 (Cooling system, feedback signals, signal source)
Remedy:	Check the device to de-ionize the cooling liquid.
A49171	Cooling system: Conductivity has exceeded the alarm threshold
Message value:	-
Drive object:	VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	Conductivity monitoring is set for the cooling liquid (r0267.7, from p0266[7]). See also: p0261 (Cooling system, starting time 2), p0262 (Cooling system, fault conductivity delay time), p0266 (Cooling system, feedback signals, signal source), r0267 (Cooling system status word)
Remedy:	Check the device to de-ionize the cooling liquid.
A49172	Cooling system: Conductivity actual value is not valid
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	When monitoring the conductivity of the cooling liquid, there is a fault in the wiring or in the sensor.
Remedy:	- check the wiring between the cooling system and the Power Stack Adapter (PSA). - check the function of the sensor to measure the conductivity.
A49173	Cooling system: Cooling liquid temperature has exceeded the alarm threshold
Message value:	-
Drive object:	A_INF, B_INF, S_INF, SERVO, VECTOR
Reaction:	NONE
Acknowledge:	NONE
Cause:	The cooling liquid intake temperature has exceeded the specified alarm threshold.
Remedy:	Check the cooling system and the ambient conditions.

F49200 Excitation group signal fault

Message value: %1
Drive object: VECTOR
Reaction: OFF2
Acknowledge: IMMEDIATELY
Cause: The excitation sequence control signals a fault.
Fault value (r0949, interpret hexadecimal):
Bit 0:
When powered down or when powering down the excitation, the signal "excitation ready to power up feedback signal" was not received within the monitoring time.
Bit 1:
After an ON command, the signal "excitation ready feedback signal" was not received within the monitoring time.
Bit 2:
After the pulses were enabled, the signal "excitation operational feedback signal" was not received within the monitoring time.
Bit 3:
The "excitation group signal fault" signal is present.
Remedy: - check the excitation.
- check commands, feedback signals and BICO interconnections.

A49201 (F) Excitation group signal alarm

Message value: -
Drive object: VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: The "excitation group signal alarm" signal is present.
Remedy: Check the excitation equipment.
Reaction upon F: NONE
Acknowl. upon F: IMMEDIATELY

A50002 (F) COMM BOARD: Alarm 2

Message value: %1
Drive object: A_INF, B_INF, CU_LINK, CU_S, CU_S_CU310DP, CU_S_CU310PN, CU_S_S150, ENCODER, HUB, S_INF, SERVO, TB30, TM120, TM15, TM15DI_DO, TM17, TM31, TM41, TM54F_MA, TM54F_SL, VECTOR
Reaction: NONE
Acknowledge: NONE
Cause: In the case of CBE20 SINAMICS Link:
A specific telegram word (send) is being used twice.
Alarm value (r2124, interpret decimal):
Telegram word used twice
See also: p8871 (SINAMICS Link send telegram word PZD)
Remedy: In the case of CBE20 SINAMICS Link:
Correct the parameter assignment.
See also: p8871 (SINAMICS Link send telegram word PZD)
Reaction upon F: Infeed: NONE (OFF1, OFF2)
Servo: NONE (OFF1, OFF2, OFF3)
Vector: NONE (OFF1, OFF2, OFF3)
Acknowl. upon F: IMMEDIATELY

A50003 (F)	COMM BOARD: Alarm 3
Message value:	Info. 1: %1, info. 2: %2

A.2.2 Encoder code

1FK6 encoders

Table A-5 Encoder code for 1FK6 encoders

Order number	Encoder code (p0400)	Remark
1FK6xxx-xxxxx-xAxx	2001	-
1FK6xxx-xxxxx-xExx	2051	-
1FK6xxx-xxxxx-xGxx	2052	-
1FK6xxx-xxxxx-xHxx	2053	-
1FK6xxx-xxxxx-xJxx	2054	-
1FK6xxx-xxxxx-xSxx	1002 1003 1004	4p (2-speed) 6p (3-speed) 8p (4-speed) The pole number of the resolver corresponds to the pole number of the motor (see catalog).
1FK6xxx-xxxxx-xTxx	1001	-

1FK7 encoders

Table A-6 Encoder code for 1FK7 encoders

Order number	Encoder code (p0400)	Remark
1FK7xxx-xxxxx-xAxx	2001	-
1FK7xxx-xxxxx-xExx	2051	-
1FK7xxx-xxxxx-xGxx	2052	-
1FK7xxx-xxxxx-xHxx	2053	-
1FK7xxx-xxxxx-xJxx	2054	-
1FK7xxx-xxxxx-xSxx	1002 1003 1004	4p (2-speed) 6p (3-speed) 8p (4-speed) The pole number of the resolver corresponds to the pole number of the motor (see catalog).
1FK7xxx-xxxxx-xTxx	1001	-

1FS6 encoders

Table A-7 Encoder code for 1FS6 encoders

Order number	Encoder code (p0400)	Remark
1FS6xxx-xxxxx-xAxx	2001	-
1FS6xxx-xxxxx-xExx	2051	-

1FT6 encoders

Table A-8 Encoder code for 1FT6 encoders

Order number	Encoder code (p0400)	Remark
1FT6xxx-xxxxx-xAxx	2001	-
1FT6xxx-xxxxx-xExx	2051	-
1FT6xxx-xxxxx-xHxx	2053	-
1FT6xxx-4xxxx-xSxx	1002	4p (2-speed)
1FT6xxx-6xxxx-xSxx	1003	6p (3-speed)
1FT6xxx-8xxxx-xSxx	1004	8p (4-speed)
1FT6xxx-xxxxx-xTxx	1001	-

1FW3 encoders

Table A-9 Encoder code for 1FW3 encoders

Order number	Encoder code (p0400)	Remark
1FW3xxx-xAxxx-xxxx	2001	-
1FW3xxx-xExxx-xxxx	2051	-
1FW3xxx-xGxxx-xxxx	2052	-
1FW3xxx-xSxxx-xxxx	1003	-

1PH4 encoders

Table A-10 Encoder code for 1PH4 encoders

Order number	Encoder code (p0400)	Remark
1PH4xxx-xNxxx-xxxx	2002	-

1PH7 encoders

Table A-11 Encoder code for 1PH7 encoders

Order number	Encoder code (p0400)	Remark
1PH7xxx-xExxx-xxxx	2051	-
1PH7xxx-xHxxx-xxxx	3002	-
1PH7xxx-xJxxx-xxxx	3003	-
1PH7xxx-xMxxx-xxxx	2001	-
1PH7xxx-xNxxx-xxxx	2002	-
1PH7xxx-xRxxx-xxxx	1001	-

1PM4 encoders

Table A-12 Encoder code for 1PM4 encoders

Order number	Encoder code (p0400)	Remark
1PM4xxx-xGxxx-xxxx	2002	-
1PM4xxx-xLxxx-xxxx	2003	-

1PM6 encoders

Table A-13 Encoder code for 1PM6 encoders

Order number	Encoder code (p0400)	Remark
1PM6xxx-xGxxx-xxxx	2002	-
1PM6xxx-xLxxx-xxxx	2003	-

2SP1 encoders

Table A-14 Encoder code for 2SP1 encoders

Order number	Encoder code (p0400)	Remark
2SP1xxx-xHxxx-xxxx	2003	-

List of abbreviations

B

Note:

The following list of abbreviations includes all abbreviations and their meanings used in the entire SINAMICS user documentation.

Abbreviation	Source of abbreviation	Meaning
A		
A...	Alarm	Alarm
AC	Alternating Current	Alternating current
ADC	Analog Digital Converter	A-D converter
AI	Analog Input	Analog input
AIM	Active Interface Module	Active interface module
ALM	Active Line Module	Active Line Module
AO	Analog Output	Analog output
AOP	Advanced Operator Panel	Advanced operator panel
APC	Advanced Positioning Control	Advanced Positioning Control
AR	Automatic Restart	Automatic restart
ASC	Armature Short-Circuit	Armature short-circuit
ASCII	American Standard Code for Information Interchange	American Standard Code for Information Interchange
ASM	Induction motor	Induction motor
B		
BB	Operating condition	Operating condition
BERO	-	Contact-free proximity switch
BI	Binector Input	Binector input
BIA	Berufsgenossenschaftliches Institut für Arbeitssicherheit	Germany's Institute for Occupational Safety and Health
BICO	Binector Connector Technology	Binector connector technology
BLM	Basic Line Module	Basic Line Module
BO	Binector Output	Binector output
BOP	Basic Operator Panel	Basic Operator Panel
C		
C	Capacitance	Capacitance
C...	-	Safety message
CAN	Controller Area Network	Serial bus system

Abbreviation	Source of abbreviation	Meaning
CBC	Communication Board CAN	Communication Board CAN
CD	Compact disc	Compact disc
CDS	Command Data Set	Command data set
CF Card	CompactFlash Card	CompactFlash memory card
CI	Connector Input	Connector input
CLC	Clearance Control	Clearance control
CNC	Computerized Numerical Control	Computer-supported numerical control
CO	Connector Output	Connector output
CO/BO	Connector Output/Binector Output	Connector output/binector output
COB ID	CAN Object Identification	CAN object identification
COM	Common contact of a change-over relay	Center contact on a changeover contact
COMM	Commissioning	Commissioning
CP	Communications Processor	Communications processor
CPU	Central Processing Unit	Central processing unit
CRC	Cyclic Redundancy Check	Cyclic redundancy check
CSM	Control Supply Module	Control Supply Module
CU	Control Unit	Control unit
CUA	Control Unit Adapter	Control Unit Adapter
CUD	Control Unit DC MASTER	Control Unit DC MASTER
D		
DAC	Digital Analog Converter	D-A converter
DC	Direct Current	Direct current
DCB	Drive Control Block	Drive Control Block
DCC	Drive Control Chart	Drive control chart
DCC	Data Cross Check	Crosswise data comparison
DCN	Direct Current Negative	Direct current negative
DCP	Direct Current Positive	Direct current positive
DDS	Drive Data Set	Drive data set
DI	Digital Input	Digital input
DI/DO	Digital Input/Digital Output	Digital input/digital output, bidirectional
DMC	DRIVE-CLiQ Hub Module Cabinet	DRIVE-CLiQ Hub Module Cabinet
DME	DRIVE-CLiQ Hub Module External	DRIVE-CLiQ Hub Module External
DO	Digital Output	Digital output
DO	Drive Object	Drive object
DP	Decentralized Peripherals	Distributed I/Os
DPRAM	Dual-Port Random Access Memory	Memory with dual access
DRAM	Dynamic Random Access Memory	Dynamic memory
DRIVE-CLiQ	Drive Component Link with IQ	Drive Component Link with IQ
DSC	Dynamic Servo Control	Dynamic Servo Control
E		
EASC	External Armature Short-Circuit	External armature short-circuit

Abbreviation	Source of abbreviation	Meaning
EDS	Encoder Data Set	Encoder data set
EGB	Electrostatically Sensitive Devices (ESD)	Electrostatically Sensitive Devices (ESD)
ELCB	Earth Leakage Circuit Breaker	Residual current operated circuit breaker
ELP	Earth Leakage Protection	Ground-fault monitoring
EMC	Electromagnetic Compatibility	Electromagnetic compatibility
EMF	Electromagnetic Force	Electromagnetic force
EMK	Electromagnetic force	Electromagnetic force
EMV	Electromagnetic compatibility	Electromagnetic compatibility
EN	Europäische Norm (European standard)	Europäische Norm (European standard)
EnDat	Encoder Data Interface	Encoder interface
EP	Enable Pulses	Pulse enable
EPOS	Basic positioner	Basic positioner
ES	Engineering System	Engineering system
ESB	Equivalent circuit diagram	Equivalent circuit diagram
ESD	Electrostatically Sensitive Devices	Electrostatically Sensitive Devices (ESD)
ESR	Extended Stop and Retract	Extended stop and retraction
F		
F...	Fault	Fault
FAQs	Frequently Asked Questions	Frequently asked questions
FBL	Free Blocks	Free function blocks
FCC	Function Control Chart	Function Control Chart
FCC	Flux Current Control	Flux current control
FD	Function Block Diagram	Function block diagram
F-DI	Failsafe Digital Input	Failsafe digital input
F-DO	Failsafe Digital Output	Failsafe digital output
FEM	Separately excited synchronous motor	Separately excited synchronous motor
FEPROM	Flash EPROM	Non-volatile read/write memory
FG	Function Generator	Function generator
FI	-	Fault current
FOC	Fiber-Optic Cable	Fiber-optic cable
FP	Function block diagram	Function block diagram
FPGA	Field Programmable Gate Array	Field Programmable Gate Array
FW	Firmware	Firmware
G		
GB	Gigabyte	Gigabyte
GC	Global Control	Global Control Telegram (broadcast telegram)
GND	Ground	Reference potential for all signal and operating voltages, usually defined as 0 V (also referred to as G)
GSD	GSD file	Master device file: Describes the characteristics of a PROFIBUS slave

Abbreviation	Source of abbreviation	Meaning
GSV	Gate Supply Voltage	Gate Supply Voltage
GUID	Globally Unique Identifier	Globally unique identifier
H		
HF	High Frequency	High frequency
HFD	High-frequency reactor	High-frequency reactor
HLG	Ramp-function generator	Ramp-function generator
HMI	Human Machine Interface	Human-machine interface
HTL	High-Threshold Logic	Logic with a high fault threshold
HW	Hardware	Hardware
I		
i. V.	Under development	Under development: This feature is not currently available.
I/O	Input/Output	Input/output
I2C	Inter-Integrated Circuit	Internal serial data bus
IASC	Internal Armature Short-Circuit	Internal armature short-circuit
IBN	Commissioning	Commissioning
ID	Identifier	Identification
IE	Industrial Ethernet	Industrial Ethernet
IEC	International Electrotechnical Commission	International electrotechnical standard
IF	Interface	Interface
IGBT	Insulated Gate Bipolar Transistor	Insulated gate bipolar transistor
IGCT	Integrated Gate-Controlled Thyristor	Semiconductor circuit breaker with integrated control electrode
IL	Pulse cancellation (Impulslöschung)	Pulse cancellation
IP	Internet Protocol	Internet Protocol
IPO	Interpolator	Interpolator
IT	Isolé Terré	Isolated three-phase supply network
IVP	Internal Voltage Protection	Internal voltage protection
J		
JOG	Jogging	Jogging
K		
KDV	Crosswise data comparison	Crosswise data comparison
KIP	Kinetic buffering	Kinetic buffering
Kp	-	Proportional gain
KTY	-	Special temperature sensor
L		
L	-	Formula symbol for inductance
LED	Light Emitting Diode	Light Emitting Diode
LIN	Linear motor	Linear motor
LR	Position controller	Position controller
LSB	Least Significant Bit	Least significant bit
LSC	Line-Side Converter	Line-side converter

Abbreviation	Source of abbreviation	Meaning
LSS	Line-side switch	Line-side switch
LU	Length Unit	Length unit
LWL	Fiber-optic cable	Fiber-optic cable
M		
M	-	Formula symbol for torque
M	Ground	Reference potential for all signal and operating voltages, usually defined as 0 V (also referred to as GND)
MB	Megabyte	Megabyte
MCC	Motion Control Chart	Motion Control Chart
MDS	Motor Data Set	Motor data set
MLFB	Machine-Readable Product Code	Machine-Readable Product Code
MMC	Man-Machine Communication	Man-machine communication
MMC	Micro Memory Card	Micro memory card
MSB	Most Significant Bit	Most significant bit
MSC	Motor-Side Converter	Motor-side converter
MSCY_C1	Master Slave Cycle Class 1	Cyclic communication between master (Class 1) and slave
MSR	Motor-side converter	Motor-side converter
MT	Probe	Probe
N		
N. C.	Not Connected	Not connected
N...	No Report	No message or internal message
NAMUR	Standardization association for measurement and control in chemical industries	Standardization association for measurement and control in chemical industries
NC	Normally Closed (contact)	NC contact
NC	Numerical Control	Numerical control
NEMA	National Electrical Manufacturers Association	Standardization body in the USA
NM	Zero mark	Zero mark
NO	Normally Open (contact)	N/O contact
NSR	Line-side converter	Line-side converter
NVRAM	Non-Volatile Random Access Memory	Non-volatile read/write memory
O		
OA	Open Architecture	Open Architecture
OC	Operating Condition	Operating condition
OEM	Original Equipment Manufacturer	Original Equipment Manufacturer
OLP	Optical Link Plug	Fiber-optic bus connector
OMI	Option Module Interface	Option module interface
P		
p...	-	Adjustable parameters
PB	PROFIBUS	PROFIBUS

Abbreviation	Source of abbreviation	Meaning
PcCtrl	PC Control	Control for master
PD	PROFIdrive	PROFIdrive
PDS	Power Unit Data Set	Power unit data set
PE	Protective Earth	Protective earth
PELV	Protective Extra Low Voltage	Protective extra low voltage
PEM	Permanent-magnet synchronous motor	Permanent-magnet synchronous motor
PG	Programming device	Programming device
PI	Proportional Integral	Proportional integral
PID	Proportional Integral Differential	Proportional integral differential
PLC	Programmable Logic Controller	Programmable logic controller
PLL	Phase-locked loop	Phase-locked loop
PN	PROFINET	PROFINET
PNO	PROFIBUS user organization	PROFIBUS user organization
PPI	Point-to-Point Interface	Point-to-point interface
PRBS	Pseudo Random Binary Signal	White noise
PROFIBUS	Process Field Bus	Serial data bus
PS	Power Supply	Power supply
PSA	Power Stack Adapter	Power Stack Adapter
PTC	Positive Temperature Coefficient	Positive temperature coefficient
PTP	Point-To-Point	Point-to-Point
PWM	Pulse Width Modulation	Pulse width modulation
PZD	Process data	Process data
R		
r...	-	Display parameters (read-only)
RAM	Random Access Memory	Read/write memory
RCCB	Residual Current Circuit Breaker	Ground-fault circuit interrupter
RCD	Residual Current Device	Ground-fault circuit interrupter
RCM	Residual Current Monitor	Residual current monitor
RFG	Ramp-Function Generator	Ramp-function generator
RJ45	Registered Jack 45	Term for an 8-pin socket system for data transmission with shielded or non-shielded multi-wire copper cables
RKA	Cooling unit	Cooling unit
RO	Read Only	Read only
RPDO	Receive Process Data Object	Receive process data object

Abbreviation	Source of abbreviation	Meaning
RS232	Recommended Standard 232	Interface standard for cable-connected serial data transmission between a sender and receiver (also known under EIA232)
RS485	Recommended Standard 485	Interface standard for a cable-connected differential, parallel, and/or serial bus system (data transmission between a number of senders and receivers, also known as EIA485)
RTC	Real Time Clock	Real time clock
RZA	Space vector approximation	Space vector approximation
S		
S1	-	Continuous operation
S3	-	Intermittent operation
SBC	Safe Brake Control	Safe brake control
SBH	Safe operating stop	Safe operating stop
SBR	-	Safe acceleration monitoring
SCA	Safe Cam	Safe cam
SD Card	Secure Digital Card	Secure digital memory card
SE	Safe software limit switch	Safe software limit switch
SG	Safely-limited speed	Safely-limited speed
SGA	Safety-related output	Safety-related output
SGE	Safety-related input	Safety-related input
SH	Safe standstill	Safe standstill
SI	Safety Integrated	Safety Integrated
SIL	Safety Integrity Level	Safety Integrity Level
SLM	Smart Line Module	Smart Line Module
SLP	Safely-Limited Position	Safely-limited position
SLS	Safely-Limited Speed	Safely-limited speed
SLVC	Sensorless Vector Control	Vector control without encoder
SM	Sensor Module	Sensor Module
SMC	Sensor Module Cabinet	Sensor Module Cabinet
SME	Sensor Module External	Sensor Module External
SN	Safe software cam	Safe software cam
SOS	Safe Operating Stop	Safe operating stop
SP	Service Pack	Service pack
SPC	Setpoint Channel	Setpoint channel
SPI	Serial Peripheral Interface	Serial interface for connecting peripherals
SPS	Programmable logic controller	Programmable logic controller
SS1	Safe Stop 1	Safe stop 1 (monitored for time and ramping up)
SS2	Safe Stop 2	Safe stop 2
SSI	Synchronous Serial Interface	Synchronous serial interface

Abbreviation	Source of abbreviation	Meaning
SSM	Safe Speed Monitor	Safe feedback for speed monitoring ($n < n_x$)
SSP	SINAMICS Support Package	SINAMICS support package
STO	Safe Torque Off	Safe torque off
STW	Control word	Control word
T		
TB	Terminal Board	Terminal board
TIA	Totally Integrated Automation	Totally Integrated Automation
TM	Terminal Module	Terminal module
TN	Terre Neutre	Grounded three-phase supply network
Tn	-	Integral time
TPDO	Transmit Process Data Object	Transmit process data object
TT	Terre Terre	Grounded three-phase supply network
TTL	Transistor-Transistor Logic	Transistor-transistor logic
Tv	-	Rate time
U		
UL	Underwriters Laboratories Inc.	Underwriters Laboratories Inc.
UPS	Uninterruptible Power Supply	Uninterruptible power supply
USV	Uninterruptible power supply	Uninterruptible power supply
UTC	Universal Time Coordinated	Universal Time Coordinated
V		
VC	Vector Control	Vector control
Vdc	-	DC-link voltage
VdcN	-	Partial DC-link voltage, negative
VdcP	-	Partial DC-link voltage, positive
VDE	Verband Deutscher Elektrotechniker	Association of German Electrical Engineers
VDI	Verein Deutscher Ingenieure	Association of German Engineers
VPM	Voltage Protection Module	Voltage Protection Module
Vpp	Volt peak to peak	Volt peak to peak
VSM	Voltage Sensing Module	Voltage sensing module
W		
WEA	Automatic restart	Automatic restart
WZM	Machine tool	Machine tool
X		
XML	Extensible Markup Language	Standard language for web publishing and document management
Z		
ZK	DC link	DC link
ZM	Zero Mark	Zero mark
ZSW	Status word	Status word

Documentation for Safety Equipment

Note

For more information on technical documentation in and around the topic of "Safety Integrated", please follow the link below:

<http://www.siemens.de/safety>

The following list contains some of the safety-related documentation available.

/LV1/	Low Voltage Switchgear SIRIUS-SENTRON-SIVACON		
	Catalog		
	Order number:	E86060-K1002-A101-A5	Edition: 2006
/MRL/	Directive 2006/42/EU of the European Parliament and Council		
	Machinery Directive		
	Bundesanzeiger-Verlags GmbH		Edition: 2006
/SISH/	Safety Integrated		
	System Manual		
	Order number:	6ZB5000-0AA01-0BA1	5th Edition
	System Manual Appendix to 5th Edition		
	Order number:	6ZB5000-0AB01-0BA0	
/SICD/	Safety Integrated		
	CD-ROM		
	Order number:	E20001-F500-P210	Edition: 04/2008

Status word, monitoring functions 1,
2-1489
- 2536
Status word, monitoring functions 2,
2-1490
- 2537
Status word, monitoring functions 3,
2-1491
- 2546
Control word faults/alarms, 2-1492
- 2548
Status word faults/alarms 1 and 2, 2-1493
- 2610
Sequencer, 2-1495
- 2634
Missing enable signals, line contactor
control, logic operation, 2-1496
- 2701
Basic brake control (r0108.14 = 0),
2-1498

- 2704
 - Extended brake control, stationary state detection (r0108.14 = 1), 2-1499
- 2707
 - Extended brake control, open/close brake (r0108.14 = 1), 2-1500
- 2711
 - Extended brake control, signal outputs (r0108.14 = 1), 2-1501
- 2800
 - Basic functions, parameter manager, 2-1503
- 2802
 - Basic functions, monitoring and faults/alarms, 2-1504
- 2804
 - Basic functions, status words, 2-1505
- 2810
 - Basic functions, STO (Safe Torque Off)/SS1 (Safe Stop 1), 2-1506
- 2814
 - Basic functions, SBC (Safe Brake Control), 2-1507
- 2820
 - Extended functions, SLS, 2-1508
- 2825
 - Extended functions, SS1, SS2, SOS, Internal STOP B, C, D, F, 2-1509
- 2840
 - Extended functions, control word and status word, 2-1510
- 2846
 - Extended functions, parameter manager, 2-1511
- 2847
 - Extended functions, TM54F parameter manager, 2-1512
- 2848
 - Extended functions, TM54F configuration, F-DI/F-DO test, 2-1513
- 2850
 - Extended functions, TM54F (F-DI 0 to F-DI 4), 2-1514
- 2851
 - Extended functions, TM54F (F-DI 5 to F-DI 9), 2-1515
- 2853
 - Extended functions, TM54F (F-DO 0 to F-DO 3, DI 20 to DI 23), 2-1516
- 2855
 - Extended functions, TM54F control interface, 2-1517
- 2856
 - Extended functions, TM54F Safe State selection, 2-1518
- 2857
 - Extended functions, TM54F assignment (F-DO 0 to F-DO 3), 2-1519
- 3010
 - Fixed speed setpoints, 2-1521
- 3020
 - Motorized potentiometer, 2-1522
- 3030
 - Main/additional setpoint, setpoint scaling, jogging, 2-1523
- 3040
 - Direction limitation and direction reversal, 2-1524
- 3050
 - Skip frequency bands and speed limiting, 2-1525
- 3060
 - Basic ramp-function generator, 2-1526
- 3070
 - Extended ramp-function generator, 2-1527
- 3080
 - Ramp-function generator selection, status word, tracking--, 2-1528
- 3090
 - Dynamic Servo Control (DSC), 2-1529
- 3095
 - Formation of the speed limits (r0108.8 = 0), 2-1531
- 3610
 - Jog mode (r0108.4 = 1), 2-1533
- 3612
 - Referencing/reference point approach mode (r0108.4 = 1) (p2597 = 0-signal), 2-1534
- 3614
 - Flying referencing mode (r0108.4 = 1) (p2597 = 1 signal), 2-1535
- 3615
 - Traversing blocks, external block change mode (r0108.4 = 1), 2-1536
- 3616
 - Traversing blocks mode (r0108.4 = 1), 2-1537
- 3617
 - Travel to fixed stop, 2-1538
- 3618
 - Direct setpoint entry/MDI mode, dynamic values (r0108.4 = 1), 2-1539

- 3620
 - Direct setpoint entry/MDI mode (r0108.4 = 1), 2-1540
- 3625
 - Mode control (r0108.4 = 1), 2-1541
- 3630
 - Traversing range limits (r0108.4 = 1), 2-1542
- 3635
 - Interpolator (r0108.4 = 1), 2-1543
- 3640
 - Control word block selection/MDI selection (r0108.4 = 1), 2-1544
- 3645
 - Status word 1 (r0108.3 = 1, r0108.4 = 1), 2-1545
- 3646
 - Status word 2 (r0108.3 = 1, r0108.4 = 1), 2-1546
- 3650
 - Status word active traversing block/MDI active (r0108.4 = 1), 2-1547
- 4010
 - Actual position value preprocessing (r0108.3 = 1), 2-1549
- 4015
 - Position controller (r0108.3 = 1), 2-1550
- 4020
 - Standstill/positioning monitoring (r0108.3 = 1), 2-1551
- 4025
 - Dynamic following error monitoring, cam controllers (r0108.3 = 1), 2-1552
- 4704
 - Position and temperature sensing, encoders 1 to 3, 2-1554
- 4710
 - Actual speed value and pole position sensing, motor encoder (encoder 1), 2-1555
- 4711
 - Actual speed value sensing, encoder 2, 3 (r0108.7 = 1, APC activated), 2-1556
- 4715
 - Actual speed value and pole position sensing, ASM/SM motor encoder (encoder 1), 2-1557
- 4720
 - Encoder interface, incoming signals, encoders 1 to 3, 2-1558
- 4730
 - Encoder interface, outgoing signals, encoders 1 to 3, 2-1559
- 4735
 - Reference mark search with external zero mark, encoder 1 to 3, 2-1560
- 4740
 - Measuring probe evaluation, measured value memory, encoder 1 to 3, 2-1561
- 5020
 - Speed setpoint filter and speed pre-control, 2-1563
- 5030
 - Reference model/pre-control balancing/speed limitation, 2-1564
- 5040
 - Speed controller with encoder, 2-1565
- 5042
 - Speed controller, torque-speed pre-control with encoder (p1402 = 1), 2-1566
- 5050
 - Kp_n-/Tn_n adaptation, 2-1567
- 5060

2-1660

Line contactor control, 2-1659

Line supply voltage monitoring, 2-1661

Sequencer, 2-1658

Signals and monitoring functions, 2-1654

Status word, sequence control, 2-1656

Table of contents, 2-1654

Smart Infeed function diagrams

Control word

sequence control infeed, 2-1655

Interface for Smart Infeed (control signals,
actual values), 2-1660

Missing enable signals, line contactor
control, 2-1659

Sequencer, 2-1658

Signals and monitoring functions, line
frequency and Vdc monitoring, 2-1662

Signals and monitoring functions, line
supply voltage monitoring, 2-1661

Status word

sequence control infeed, 2-1656

Status word, infeed, 2-1657

Speed control

Servo, 2-1562

Vector, 2-1582

Speed messages, 2-1626

Status words

Internal, 2-1481

Standard telegrams, 2-1427

STOP1, 3-1734

STOP2, 3-1734

Support, Preface-7

Support Request, Preface-7

Synchronization, 2-1619

T

- T - Ready state, 1-18
- Target group, Preface-6
- Technical support, Preface-7
- Technology controller (p0108.16 = 1), 2-1620
- Technology functions, 2-1612
- Telegrams, 2-1427
- Terminal Board 30 (TB30)
 - Analog inputs/outputs, 2-1675
 - Digital inputs/outputs, 2-1675
- Terminal Module 120 (TM120), 2-1702
- Terminal Module 15 for SINAMICS (TM15DI/DO), 2-1687
- Terminal Module 31 (TM31), 2-1691
 - Analog inputs/outputs, 2-1691
 - Digital inputs/outputs, 2-1691
 - Relay outputs, 2-1691
- Terminal Module 41 (TM41), 2-1705
- Terminals
 - Control Unit 320-2 (CU320-2), 2-1414
 - Controller Extension 32 (CX32), 2-1423
 - Terminal Board 30 (TB30), 2-1675
 - Terminal Module 31 (TM31), 2-1691
- Thermal monitoring, 2-1626
- Torque messages, 2-1626
- Triggering when messages are issued (r2129), 2-1635

U

- U - Run state, 1-18
- Unit (parameter), 1-22
- Usage phases, Preface-6

V

- V/f control
 - Servo, 2-1570
 - Vector, 2-1590
- Values (parameter), 1-26

- Variable signaling function, 2-1571

Vector control

- Current setpoint filter, 2-1598
- Droop, 2-1584
- Encoder evaluation, 2-1553
- Field weakening characteristic, Id setpoint, 2-1601
- Flux control, 2-1594
- Iq and Id controller, 2-1599
- Kp_n-/Tn_n adaptation, 2-1587
- Resonance damping and slip compensation, 2-1591
- Speed control configuration, 2-1593
- Speed controller with/without encoder, 2-1586
- Table of contents, 2-1582
- Torque setpoint, 2-1588
- V/f characteristic, 2-1590
- Vdc_max controller and Vdc_min controller, 2-1592

Version

- List of all parameters, 1-30
- List of faults and alarms, 3-1742
- List of parameters for command data sets, 1-1349
- List of parameters for drive data sets, 1-1352
- List of parameters for encoder data sets, 1-1364
- List of parameters for motor data sets, 1-1365
- List of parameters for power unit data sets, 1-1369

Voltage Sensing Module (VSM)

- Analog inputs, 2-1722
- Sensor monitoring KTY/PTC, 2-1722
- Temperature evaluation, 2-1722

Comments/suggestions

Your comments and suggestions help us improve the quality and usability of our documentation. Please complete the questionnaire and return it by mail or fax to Siemens.

Name of manual: SINAMICS S120/S150

Order no. of manual: 6SL3097-4AP00-0BP0

Please answer the following questions, giving each one a mark between 1 = good to 5 = poor.

- | | |
|--|--------------------------|
| 1. Do the contents meet your requirements? | ☐ |
| 2. Is it easy to find the information you need? | ☐ |
| 3. Is the text easy to understand? | ☐ |
| 4. Is the level of technical detail appropriate to your requirement? | ☐ |
| 5. Please rate the quality of the graphics and tables. | ☐ |

If you encountered any specific problems, please describe these in the space provided below:

SINAMICS documentation overview

General documentation/catalogs

D11.1
Inverter Chassis Units
0.12 kW to 3 kW

D11
Drive Converter Chassis Units
Drive Converter Cabinet Units

PM21
SIMOTION, SINAMICS S120 and
Motors for Production Machines

D21.3
SINAMICS S120 Chassis Units
Chassis Format Units and Cabinet Modules
SINAMICS S150
Converter Cabinet Units
